(54) Title: GAPMER ANTISENSE OLIGONUCLEOTIDES WITH MODIFIED BACKBONE CHEMISTRIES

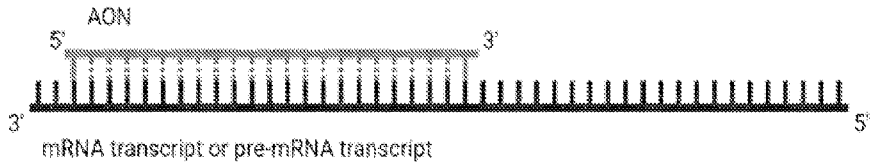

FIGURE 1

(57) Abstract: Disclosed herein are antisense oligonucleotides, such as gapmer antisense oligonucleotides with a modified backbone chemistry (e.g., with one or more spacers). Such gapmer antisense oligonucleotides with modified backbone chemistries may be useful for treating various diseases, such as neurological diseases.

WO 2023/102188 A1

GAPMER ANTISENSE OLIGONUCLEOTIDES WITH MODIFIED BACKBONE CHEMISTRIES

CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] This application claims the benefit of U.S. Provisional Application No. 63/285,705, filed on December 3, 2021, U.S. Provisional Application No. 63/285,888, filed on December 3, 2021, U.S. Provisional Application No. 63/285,692, filed on December 3, 2021, U.S. Provisional Application No. 63/285,696, filed on December 3, 2021, and U.S. Provisional Application No. 63/285,665, filed on December 3, 2021, each of which is hereby incorporated herein by reference in their entireties for all purposes.

REFERENCE TO A SEQUENCE LISTING XML

[0002] This application contains a sequence listing which has been submitted electronically in XML format. The Sequence Listing XML is incorporated herein by reference. Said XML file, created on November 17, 2022, is named QRL-011WO_SL.xml and is 418,206,230 in size.

BACKGROUND

[0003] Antisense oligonucleotides are nucleic acid-based compounds that can be used to inhibit expression of certain genes that are linked to diseases. Although antisense oligonucleotides can be generally designed to hybridize with target genes, conventional antisense oligonucleotides often exhibit poor efficacy. Thus, there is a need to develop modified antisense oligonucleotides that exhibit improved performance and efficacy for preventing, ameliorating, and treating diseases, examples of which include neurological diseases.

SUMMARY

[0004] Disclosed herein is a compound comprising a gapmer oligonucleotide, and wherein the gapmer oligonucleotide comprises a spacer. Additionally disclosed herein is a gapmer oligonucleotide, wherein the gapmer oligonucleotide comprises a spacer. In various embodiments, the gapmer oligonucleotide comprises a second spacer that is non-adjacent to the spacer.

[0005] In various embodiments, the gapmer oligonucleotide comprises a sequence that is between 85 and 98% complementary to an equal length portion of a transcript whose presence leads to a neurological disease. In various embodiments, the gapmer oligonucleotide comprises a sequence that is between 85 and 98% complementary to an equal length portion of a PPM1A

mRNA or pre-mRNA transcript, an ATXN2 mRNA or pre-mRNA transcript, a SOD1 mRNA or pre-mRNA transcript, or a MAPT mRNA or pre-mRNA transcript. In various embodiments, the gapmer oligonucleotide comprises a sequence that is between 85 and 98% complementary to an equal length portion of any one of SEQ ID NOs: 1909-1913, 149355-149361, 167802-167804, or 301567-301589, a sequence having 90% identity thereof, or to a 15 to 50 contiguous nucleobase portion thereof.

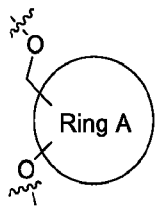
[0006] In various embodiments, the gapmer oligonucleotide comprises a sequence that shares at least 85% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566,SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In various embodiments, the gapmer oligonucleotide comprises a sequence that shares at least 90% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In various embodiments, the gapmer oligonucleotide comprises a sequence that shares at least 95% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In various embodiments, the gapmer oligonucleotide comprises a sequence that shares at least 100% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[0007] In various embodiments, the gapmer oligonucleotide comprises a segment with at most 11 linked nucleosides, and wherein the gapmer oligonucleotide comprises a sequence that shares at least 85% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In various embodiments, the gapmer oligonucleotide comprises a segment with at most 10, 9, 8, 7, 6, 5, 4, 3, or 2 linked nucleosides, and wherein the gapmer oligonucleotide comprises a sequence that shares at least 85% identity with an equal length portion of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In various embodiments, the gapmer oligonucleotide comprises a segment with at most 11 linked nucleosides, and wherein the gapmer oligonucleotide comprises a sequence that shares at least 90% identity with an equal length portion of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In various embodiments, the gapmer oligonucleotide comprises a segment with at most 10, 9, 8, 7, 6, 5, 4, 3, or 2 linked nucleosides, and wherein the gapmer oligonucleotide comprises a sequence that shares at least 90% identity with an equal length portion of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[0008] In various embodiments, the gapmer oligonucleotide is at least 18, at least 19, at least 20, at least 21, at least 22, at least 23, at least 24, or at least 25 oligonucleotide units in length. In various embodiments, at least one (*i.e.*, one or more) nucleoside linkage of the gapmer oligonucleotide is a non-natural linkage, In various embodiments, the gapmer oligonucleotide is at least 19 oligonucleotide units in length.

[0009] In various embodiments, the spacer is a nucleoside-replacement group comprising a non-sugar substitute that is incapable of linking to a nucleotide base. In various embodiments, the spacer is located between positions 5 and 11 of the gapmer oligonucleotide. In various embodiments, the spacer is located between positions 7 and 11 of the gapmer oligonucleotide. In various embodiments, the gapmer oligonucleotide further comprises a second spacer, and wherein the spacer and the second spacer are non-adjacent to one another. In various embodiments, the gapmer oligonucleotide further comprises a second spacer, wherein the second spacer is located between positions 15 and 19 of the gapmer oligonucleotide. In various embodiments, the spacer and the second spacer are separated by at least 5 nucleobases, at least 6 nucleobases, or at least 7 nucleobases in the gapmer oligonucleotide. In various embodiments, the spacer is located between positions 5 and 11 of the gapmer oligonucleotide, and wherein the second spacer is located between positions 15 and 19 of the gapmer oligonucleotide. In various embodiments, the spacer is located at position 8 of the gapmer oligonucleotide, and wherein the second spacer is located at position 16 of the gapmer oligonucleotide. In various embodiments, the spacer is located at position 5 of the gapmer oligonucleotide, and wherein the second spacer is located at position 17 of the gapmer oligonucleotide. In various embodiments, the spacer is located at position 7 of the gapmer oligonucleotide, and wherein the second spacer is located at position 15 of the gapmer oligonucleotide. In various embodiments, the spacer is located at position 11 of the gapmer oligonucleotide, and wherein the second spacer is located at position 19 of the gapmer oligonucleotide.

[0010] In various embodiments, each of the spacer or second spacer is a nucleoside-replacement group comprising a non-sugar substitute wherein the non-sugar substitute does not contain a ketone, aldehyde, ketal, hemiketal, acetal, hemiacetal, aminal or hemiaminal moiety and is incapable of forming a covalent bond with a nucleotide base. In various embodiments, each of the spacer or second spacer is independently represented by Formula (X), wherein:

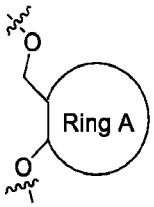


Formula (X)

Ring A is an optionally substituted 4-8 member monocyclic cycloalkyl group or a 4-8 member monocyclic heterocyclyl group, wherein the heterocyclyl group contains 1 or 2 heteroatoms selected from O, S and N, provided that A is not capable of forming a covalent bond to a nucleobase; and

the  symbol represents the point of connection to an internucleoside linkage.

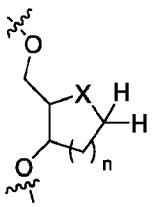
[0011] In various embodiments, each of the spacer or second spacer is independently represented by Formula (Xa), wherein:



Formula (Xa).

[0012] In various embodiments, ring A is an optionally substituted 4-8 member monocyclic cycloalkyl group selected from cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl and cyclooctyl; or a 4-8 member monocyclic heterocyclyl group, selected from oxetanyl, tetrahydrofuranyl, tetrahydropyranyl, 1,4-dioxanyl, pyrrolidinyl, piperidinyl, piperazinyl, morpholinyl and azepanyl. In various embodiments, ring A is tetrahydrofuranyl. In various embodiments, ring A is tetrahydropyranyl.

[0013] In various embodiments, each of the spacer and second spacer is independently represented by Formula I, wherein:

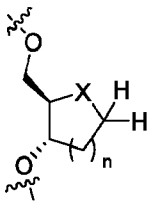


Formula (I)

X is selected from $-CH_2-$ and -O-; and

n is 0, 1, 2 or 3.

[0014] In various embodiments, each of the spacer and second spacer is independently represented by Formula I', wherein:

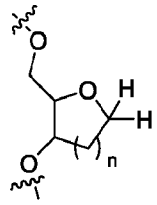


Formula (I')

X is selected from -CH_2- and -O-; and

n is 0, 1, 2 or 3.

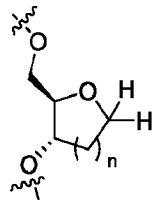
[0015] In various embodiments, each of the spacer and second spacer is independently represented by Formula (Ia), wherein:



Formula (Ia); and

n is 0, 1, 2 or 3.

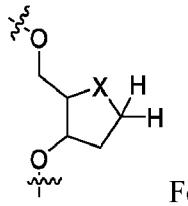
[0016] In various embodiments, each of the spacer and second spacer is independently represented by Formula (Ia'), wherein:



Formula (Ia'); and

n is 0, 1, 2 or 3.

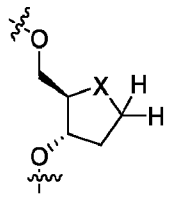
[0017] In various embodiments, each of the spacer and second spacer is independently represented by Formula II, wherein:



Formula (II); and

X is selected from -CH_2- and -O-.

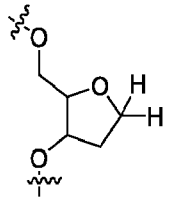
[0018] In various embodiments, each of the spacer and second spacer is independently represented by Formula II', wherein:



Formula (II'); and

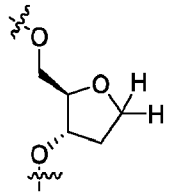
X is selected from -CH_2- and -O-.

[0019] In various embodiments, each of the spacer and second spacer is independently represented by Formula (Iia), wherein:



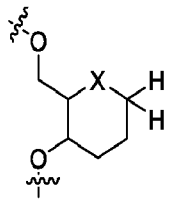
Formula (Iia).

[0020] In various embodiments, each of the spacer and second spacer is independently represented by Formula (Iia'), wherein:



Formula (Iia').

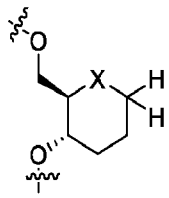
[0021] In various embodiments, each of the spacer and second spacer is independently is independently represented by Formula III, wherein:



Formula (III); and

X is selected from -CH_2- and -O-.

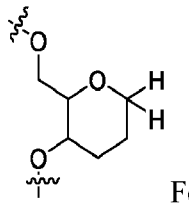
[0022] In various embodiments, each of the spacer and second spacer is independently represented by Formula III', wherein:



Formula (III'); and

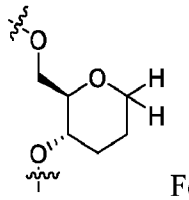
X is selected from -CH_2- and -O-.

[0023] In various embodiments, each of the spacer and second spacer is independently represented by Formula (IIIa), wherein:



Formula (IIIa).

[0024] In various embodiments, each of the spacer and second spacer is independently represented by Formula (IIIa'), wherein:



Formula (IIIa').

[0025] In various embodiments, the gapmer oligonucleotide comprising the spacer has a GC content of at least 10%. In various embodiments, the gapmer oligonucleotide comprising the spacer has a GC content of at least 20%. In various embodiments, the gapmer oligonucleotide comprising the spacer has a GC content of at least 25%. In various embodiments, the gapmer oligonucleotide comprising the spacer has a GC content of at least 30%. In various embodiments, the gapmer oligonucleotide comprising the spacer has a GC content of at least 40%. In various embodiments, the gapmer oligonucleotide comprising the spacer has a GC content of at least 50%. In various embodiments, at least one (*i.e.*, one or more) nucleoside linkage of the gapmer oligonucleotide is independently selected from the group consisting of a phosphodiester linkage, a phosphorothioate linkage, an alkyl phosphate linkage, a phosphorodithioate linkage, a phosphotriester linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a thiophosphorodiamidate linkage, a phosphorodiamidate linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage. In various embodiments, at least one internucleoside linkage of the nucleotide sequence is a phosphorothioate linkage. In various embodiments, the phosphorothioate internucleoside linkage is in one of a *R*p configuration or a *S*p configuration.

[0026] In various embodiments, the gapmer oligonucleotide comprises one or more chiral centers and/or double bonds. In various embodiments, the gapmer oligonucleotide exists as stereoisomers selected from geometric isomers, enantiomers, and diastereomers. In various embodiments, all internucleoside linkages of the nucleotide sequence are phosphorothioate

linkages. In various embodiments, the gapmer oligonucleotide comprises at least one modified nucleobase. In various embodiments, the at least one modified nucleobase is 5-methylcytosine, pseudouridine, or 5-methoxyuridine. In various embodiments, the gapmer oligonucleotide comprises at least one nucleoside with a modified sugar moiety. In various embodiments, the modified sugar moiety is one of a 2'-OMe modified sugar moiety, bicyclic sugar moiety, 2'-*O*-(2-methoxyethyl) (2'-MOE), 2'-O-(N-methylacetamide), 2'-deoxy-2'-fluoro nucleoside, 2'-fluoro-β-D-arabinonucleoside, locked nucleic acid (LNA), constrained ethyl 2'-4'-bridged nucleic acid (cEt), *S*-cEt, hexitol nucleic acids (HNA), and tricyclic analog (*e.g.*, tcDNA).

[0027] In various embodiments, the gapmer oligonucleotide comprises two, three, four, five, six, seven, eight, nine, or ten nucleosides with modified sugar moieties. In various embodiments, the modified sugar moieties are independently any one of a 2'-OMe modified sugar moiety, bicyclic sugar moiety, 2'-*O*-(2-methoxyethyl) (2'-MOE), 2'-O-(N-methylacetamide), 2'-deoxy-2'-fluoro nucleoside, 2'-fluoro-β-D-arabinonucleoside, locked nucleic acid (LNA), constrained ethyl 2'-4'-bridged nucleic acid (cEt), *S*-cEt, hexitol nucleic acids (HNA), and tricyclic analog (*e.g.*, tcDNA). In various embodiments, the gapmer oligonucleotide comprises ten 2'-*O*-(2-methoxyethyl) (2'-MOE) nucleosides. In various embodiments, five of the 2'-*O*-(2-methoxyethyl) (2'-MOE) nucleosides are located at the 3' end of the gapmer oligonucleotide, and wherein five of the 2'-*O*-(2-methoxyethyl) (2'-MOE) nucleosides are located at the 5' end of the gapmer oligonucleotide. In various embodiments, the at least one nucleoside with the modified sugar moiety or the nucleosides with modified sugar moieties are ribonucleosides. In various embodiments, the gapmer oligonucleotide comprises at least one deoxyribonucleoside. In various embodiments, the gapmer oligonucleotide comprises two, three, four, five, six, seven, eight, nine, or ten deoxyribonucleosides.

[0028] In various embodiments, the gapmer oligonucleotide comprises: a gap segment comprising one or more of linked deoxyribonucleosides, 2'-Fluoro Arabino Nucleic Acids (FANA), and Fluoro Cyclohexenyl nucleic acid (F-CeNA); a 5' wing region comprising linked nucleosides; and a 3' wing region comprising linked nucleosides; wherein the central region comprises a region of at least 8 oligonucleotide units comprising at least 4 contiguous nucleobases, the region having at least 80% identity to an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566 , SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C positioned between the 5' wing segment and the 3' wing segment; wherein the 5' wing region and the 3' wing region each comprises at least two linked nucleosides; and wherein at least one nucleoside of each wing region comprises a modified sugar.

[0029] In various embodiments, the at least two linked nucleosides of the 5' wing region are linked through a phosphorothioate internucleoside linkage and/or wherein the at least two linked nucleosides of the 3' wing region are independently linked through a phosphorothioate internucleoside linkage. In various embodiments, every internucleoside linkage of the 5' wing region and/or every internucleoside linkage of the 3' wing region, independently are phosphorothioate internucleoside linkages. In various embodiments, the 5' wing region further comprises at least one phosphodiester internucleoside linkage. In various embodiments, the 3' wing region further comprises at least one phosphodiester internucleoside linkage. In various embodiments, the at least two linked nucleosides of the 5' wing region are linked through a phosphodiester internucleoside linkage and/or wherein the at least two linked nucleosides of the 3' wing region are independently linked through a phosphodiester internucleoside linkage. In various embodiments, at least one of the internucleoside linkages of the central region is a phosphodiester linkage. In various embodiments, at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, or at least nine of the internucleoside linkages of the central region are phosphodiester linkages. In various embodiments, at least one of the internucleoside linkages of the central region is a phosphorothioate internucleoside linkage. In various embodiments, at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, or at least nine of the internucleoside linkages of the central region are phosphorothioate internucleoside linkages. In various embodiments, all internucleoside linkages of the gapmer oligonucleotide are phosphorothioate internucleoside linkages. In various embodiments, any one or all of the phosphorothioate internucleoside linkages are in a *R*p configuration, a *S*p configuration, or in any combination of *R*p and *S*p configuration.

[0030] In various embodiments, the gapmer oligonucleotide comprises at least one modified sugar moiety. In various embodiments, the 5' wing region or the 3' wing region comprises the at least one modified sugar moiety. In various embodiments, the central region comprises the at least one modified sugar moiety. In various embodiments, the at least one modified sugar moiety is any one of a 2'-OMe modified sugar moiety, bicyclic sugar moiety, 2'-O-(2-methoxyethyl) (2'-MOE), 2'-O-(N-methylacetamide), 2'-deoxy-2'-fluoro nucleoside, 2'-fluoro-β-D-arabinonucleoside, locked nucleic acid (LNA), constrained ethyl 2'-4'-bridged nucleic acid (cEt), *S*-cEt, tcDNA, hexitol nucleic acids (HNA), and tricyclic analog (*e.g.*, tcDNA). In various embodiments, the gapmer oligonucleotide comprises one or more 2'-MOE nucleosides. In various embodiments, the 5' wing region or the 3' wing region comprise one or more 2'-MOE nucleosides. In various embodiments, the 5' wing region or the 3' wing region comprise two, three, four, five, or six 2'-MOE nucleosides. In various embodiments, every nucleoside of the 5' wing region or the 3' wing

region is a 2'-MOE nucleoside. In various embodiments, the central region comprises one or more 2'-MOE nucleosides. In various embodiments, the central region comprises two, three, four, five, six, seven, eight, nine, or ten 2'-MOE nucleosides. In various embodiments, every nucleoside of the central region is a 2'- MOE nucleoside. In various embodiments, the one or more 2'-MOE nucleosides are linked through phosphorothioate internucleoside linkages.

[0031] In various embodiments, the gapmer oligonucleotide comprises sugar modifications in any of the following patterns: eeeee-d10-eeeee, eeeee-d8-eeeee, eeeeee-d11-eeeeee, eee-d8-eee, eee-d10-eee, eeee-d10-eeee, and eeee-d8-eeee, wherein e = 2'-MOE nucleoside and d = a deoxyribonucleoside, and wherein at least one "e" or at least one "d" is replaced with a spacer. In various embodiments, the gapmer oligonucleotide comprises internucleoside linkages in any of the following patterns: sssssooooooooosssss; ooooosssssssssooooo; ooooooooooooooosssss; soosssssssssssssss; sososssssssssssosos; sssssssssssssssoos; sssssooooooooooooo; sssssssssssssssssss; sssssssssssssssssssss; sssoooooooosss; ooosssssssooo; sssssssssssss; sossssssssssos; sossssssssssss; sssssssssssos; sssssssssssooo; ooosssssssssss; sssooooooooosss; ooosssssssssooo; sssssssssssssss; sssssssssssssooo; ooosssssssssssss; sossssssssssssos; sossssssssssssss; sssssssssssssos; sssooooooooooosssss; ooooosssssssssooooo; sssssssssssssssss; sssssssssssssooooo; soosssssssssssoos; soosssssssssssssss; sssssssssssssssoos; ooooosssssssssssss; sssssooooooosssss; ooooosssssssooooo; sssssssssssssooooo; ooooosssssssssss; soossssssssssoos; soossssssssssss; sssssssssssssoos; soooosssssssssssoooos; soooosssssssssssooss; sossssssssssssoss; sossssssssssssssosss; or sssssssssssssss; wherein s= a phosphorothioate linkage, and o= a phosphodiester linkage.

[0032] In various embodiments, the gapmer oligonucleotide comprises sugar modification and internucleoside linkage combinations, respectively, in any of the following patterns:

a) eeeee-d10-eeeee and sssssooooooooosssss;

b) eeeee-d10-eeeee and ooooosssssssssooooo;

c) eeeee-d10-eeeee and sssssssssssssssssss;

d) eee-d8-eee and sssooooooosss;

e) eee-d8-eee and ooosssssssooo

f) eee-d8-eee and sssssssssssss;

g) eee-d10-eee and sssooooooooosss;

h) eee-d10-eee and ooosssssssssooo;

i) eee-d10-eee and sssssssssssssss;

j) eeee-d10-eeee and ssssoooooooossss;

k) eeee-d10-eeee and oooossssssssoooo;

l) eeee-d10-eeee and sssssssssssssss;

m) eeee-d8-eeee and ssssooooooossss,

n) eeee-d8-eeee and oooossssssoooo,

o) eeee-d8-eeee and sssssssssssss,

p) eeeeee-d11-eeeeee and sssssssssssssssssssss;

q) eeeee-d10-eeeee and sosossssssssssosos;

r) eeeee-d10-eeeee and soooossssssssssooos;

s) eeeee-d10-eeeee and soooossssssssssooss;

t) eeeee-d8-eeeee and sossssssssssssoss;

u) eeeee-d10-eeeee and sossssssssssssosss;

v) eeeeee-d10-eeee and sssssssssssssssss;

wherein e = 2'-MOE nucleoside and d = a deoxyribonucleoside, and wherein s= a phosphorothioate linkage, and o= a phosphodiester linkage, and wherein at least one "e" or at least one "d" of the gapmer oligonucleotide is replaced with a spacer.

[0033] In various embodiments, the gapmer oligonucleotide comprises at least one modified nucleobase. In various embodiments, the 5' wing region or the 3' wing region comprises the at least one modified nucleobase. In various embodiments, the central region comprises the at least one modified nucleobase. In various embodiments, the at least one modified nucleobase is 5-methylcytosine, pseudouridine, or 5-methoxyuridine. In various embodiments, every cytosine in the 5' wing region or the 3' wing region is a 5-methylcytosine. In various embodiments, every cytosine in the central region is a 5-methylcytosine. In various embodiments, the gapmer oligonucleotide comprises sugar modification and internucleoside linkage combination of: eeeee-d10-eeeee and sssssssssssssssss, wherein e = 2'-MOE nucleoside and d = a deoxyribonucleoside, wherein s= a phosphorothioate linkage, wherein at least one "e" or at least one "d" of the gapmer oligonucleotide is replaced with a spacer, and wherein each cytosine of the 2'-MOE nucleosides is a 5-methylcytosine.

[0034] In various embodiments, the gapmer oligonucleotide further comprises a conjugate moiety. In various embodiments, the conjugate moiety is a cholesterol conjugate located on the 3' end of the gapmer oligonucleotide.

[0035] Additionally disclosed herein is a pharmaceutical composition comprising a gapmer oligonucleotide disclosed herein, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable excipient.

[0036] Additionally disclosed herein is a method of treating a neurological disease in a patient in need thereof, the method comprising administering to the patient a gapmer oligonucleotide disclosed herein or a pharmaceutically acceptable salt thereof, or a pharmaceutical composition disclosed herein. In various embodiments, the neurological disease is selected from the group consisting of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Limbic-predominant age-related TDP-43 encephalopathy (LATE)), Cerebral Age-Related TDP-43 With Sclerosis (CARTS), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and synaptic diseases like autism.

[0037] In various embodiments, the gapmer oligonucleotide is administered topically, parenterally, intrathecally, orally, pulmonarily, intratracheally, intranasally, transdermally, buccally, intrathalamically, intracerebroventricularly, intraocularly, sublingually, rectally, vaginally, or intraduodenally. In various embodiments, the gapmer oligonucleotide is administered intrathecally. In various embodiments, a therapeutically effective amount of the gapmer oligonucleotide is administered. In various embodiments, the patient is a human. In various embodiments, the pharmaceutical composition is suitable for topical, parenteral,

intrathecal, oral, pulmonary, intratracheal, intranasal, transdermal, buccal, intrathalamical, intracerebroventricular, intraocular, sublingual, rectal, vaginal, or intraduodenal.

[0038] Additionally disclosed herein is use of a gapmer oligonucleotide in the manufacture of a medicament for the treatment of neurological disease. In various embodiments, the neurological disease is selected from the group consisting of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Limbic-predominant age-related TDP-43 encephalopathy (LATE)), Cerebral Age-Related TDP-43 With Sclerosis (CARTS), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and synaptic diseases like autism. In various embodiments, the gapmer oligonucleotide is a gapmer oligonucleotide disclosed herein.

[0039] Additionally disclosed herein is a method of treating a neurological disease in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a pharmaceutical composition comprising a gapmer oligonucleotide, and a pharmaceutically acceptable excipient. In various embodiments, the neurological disease is selected from the group consisting of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia

(SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Limbic-predominant age-related TDP-43 encephalopathy (LATE)), Cerebral Age-Related TDP-43 With Sclerosis (CARTS), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and synaptic diseases like autism. In various embodiments, the gapmer oligonucleotide is the gapmer oligonucleotide disclosed herein, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition disclosed herein. In various embodiments, the pharmaceutical composition is administered topically, parenterally, orally, pulmonarily, rectally, buccally, sublingually, vaginally, intratracheally, intranasally, intrathecally, intracisternally, transdermally, or intraduodenally. In various embodiments, the pharmaceutical composition is administered intrathecally. In various embodiments, the patient is human.

[0040] Additionally disclosed herein is a gapmer oligonucleotide, or a pharmaceutically acceptable salt thereof, for use as a medicament. Additionally disclosed herein is a gapmer oligonucleotide, or a pharmaceutically acceptable salt thereof, for use in the treatment of a neurological disease. In various embodiments, said neurological disease is selected from the group consisting of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism.

[0041] Additionally disclosed herein is a gapmer oligonucleotide comprising the sequence of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, or a pharmaceutically acceptable salt thereof; wherein the gapmer oligonucleotide further comprises: a

gap segment comprising one or more of linked deoxyribonucleosides, 2'-Fluoro Arabino Nucleic Acids (FANA), and Fluoro Cyclohexenyl nucleic acid (F-CeNA); a 5' wing region comprising linked nucleosides; and a 3' wing region comprising linked nucleosides; wherein the gapmer oligonucleotide comprises sugar modifications of eeeee-d10-eeeee, wherein e = 2'-MOE nucleoside and d = a deoxyribonucleoside, wherein at least one "e" or at least one "d" is replaced with a spacer, and wherein each cytosine of the 2'MOE nucleosides is a 5-methylcytosine.

[0042] In various embodiments, at least one internucleoside linkage of the gapmer oligonucleotide is a phosphorothioate linkage. In various embodiments, the phosphorothioate internucleoside linkage is in one of a *R*p configuration or a *S*p configuration. In various embodiments, all internucleoside linkages of the gapmer oligonucleotide are phosphorothioate linkages. In various embodiments, the gapmer oligonucleotide comprises sugar modification and internucleoside linkage combinations, respectively, in any of the following patterns:

a) eeeee-d10-eeeee and sssssoooooooossssss;

b) eeeee-d10-eeeee and ooooosssssssssooooo;

c) eeeee-d10-eeeee and sssssssssssssssssss;

d) eee-d8-eee and sssooooooosss;

e) eee-d8-eee and ooosssssssooo

f) eee-d8-eee and sssssssssssss;

g) eee-d10-eee and sssooooooooosss;

h) eee-d10-eee and ooosssssssssooo;

i) eee-d10-eee and sssssssssssssss;

j) eeee-d10-eeee and ssssooooooooossss;

k) eeee-d10-eeee and ooooosssssssssooooo;

l) eeee-d10-eeee and sssssssssssssssss;

m) eeee-d8-eeee and ssssooooooossss,

n) eeee-d8-eeee and ooooosssssssoooo,

o) eeee-d8-eeee and sssssssssssssss,

p) eeeeee-d11-eeeeee and sssssssssssssssssssss;

q) eeeee-d10-eeeee and sosossssssssssosos;

r) eeeee-d10-eeeee and soooosssssssssooos;

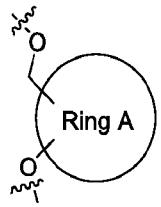
s) eeeee-d10-eeeee and soooossssssssssooss;

t) eeeee-d8-eeeee and sosssssssssssoss;

u) eeeee-d10-eeeee and sosssssssssssssosss,

wherein at least one "e" or at least one "d" of the gapmer oligonucleotide is replaced with a spacer.

[0043] Additionally disclosed herein is a pharmaceutical composition comprising an antisense gapmer oligonucleotide disclosed herein, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable excipient. In various embodiments, the spacer is a nucleoside-replacement group comprising a non-sugar substitute wherein the non-sugar substitute does not contain a ketone, aldehyde, ketal, hemiketal, acetal, hemiacetal, aminal or hemiaminal moiety and is incapable of forming a covalent bond with a nucleotide base. In various embodiments, the spacer is represented by Formula (X), wherein:

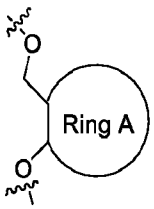


Formula (X)

Ring A is is an optionally substituted 4-8 member monocyclic cycloalkyl group or a 4-8 member monocyclic heterocyclyl group, wherein the heterocyclyl group contains 1 or 2 heteroatoms selected from O, S and N, provided that A is not capable of forming a covalent bond to a nucleobase; and

the  symbol represents the point of connection to an internucleoside linkage.

[0044] In various embodiments, the spacer is represented by Formula (Xa), wherein:

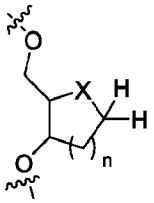


Formula (Xa).

[0045] In various embodiments, ring A is an optionally substituted 4-8 member monocyclic cycloalkyl group selected from cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl and cyclooctyl; or a 4-8 member monocyclic heterocyclyl group, selected from oxetanyl, tetrahydrofuranyl, tetrahydropyranyl, 1,4-dioxanyl, pyrolidinyl, piperidinyl, piperazinyl, morpholinyl and azepanyl.

In various embodiments, ring A is tetrahydrofuranyl. In various embodiments, ring A is tetrahydropyranyl.

[0046] In various embodiments, the spacer is represented by Formula (I), wherein:

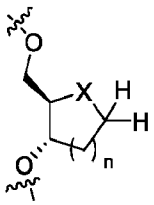


Formula (I)

X is selected from -CH_2- and -O-; and

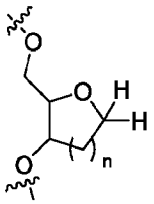
n is 0, 1, 2 or 3.

[0047] In various embodiments, the spacer is represented by Formula (I'), wherein:



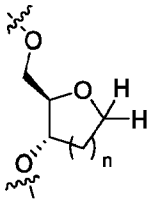
Formula (I').

[0048] In various embodiments, the spacer is represented by Formula (Ia), wherein:



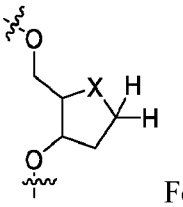
Formula (Ia).

[0049] In various embodiments, the spacer is represented by Formula (Ia'), wherein:



Formula (Ia').

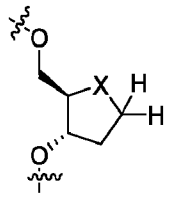
[0050] In various embodiments, the spacer is represented by Formula II, wherein:



Formula (II); and

X is selected from -CH_2- and -O-.

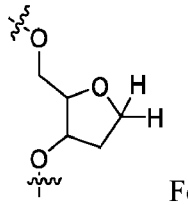
[0051] In various embodiments, the spacer is represented by Formula II', wherein:



Formula (II'); and

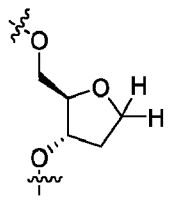
X is selected from -CH_2- and -O-.

[0052] In various embodiments, the spacer is represented by Formula (Iia), wherein:



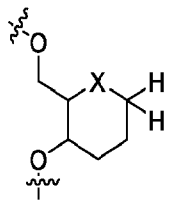
Formula (Iia).

[0053] In various embodiments, the spacer is represented by Formula (Iia'), wherein:



Formula (Iia').

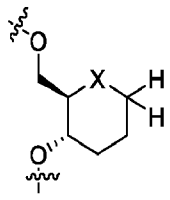
[0054] In various embodiments, the spacer is represented by Formula III, wherein:



Formula (III); and

X is selected from -CH_2- and -O-.

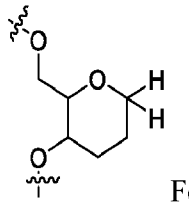
[0055] In various embodiments, the spacer is represented by Formula III', wherein:



Formula (III'); and

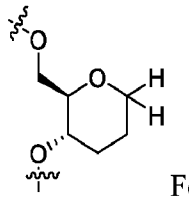
X is selected from -CH_2- and -O-.

[0056] In various embodiments, the spacer is represented by Formula (IIIa), wherein:



Formula (IIIa).

[0057] In various embodiments, the spacer is represented by Formula (IIIa'), wherein:



Formula (IIIa').

[0058] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising Riluzole (Rilutek), troriluzole, Edaravone (Radicava), rivastigmine, donepezil, QRL-101, QRL-201, galantamine, selective serotonin reuptake inhibitor, antipsychotic agents, cholinesterase inhibitors, memantine, benzodiazepine antianxiety drugs, AMX0035 (ELYBRIO®), ZILUCOPLAN (RA101495), dual AON intrathecal administration (*e.g.*, BIIB067, BIIB078), BIIB100, levodopa/carbidopa, dopaminergic agents (*e.g.*, ropinirole, pramipexole, rotigotine), medroxyprogesterone, KCNQ2/KCNQ3 openers, Pridopidine, PrimeC (combination of ciprofloxacin and Celebrex), olanzapine (Zyprexa), quetiapine (Seroquel), SSRIs, divalproex sodium (Depakote), carbamazepine (Tegretol), medroxyprogestrone, lithium, anticonvulsants and psychostimulant agents, breathing care, physical therapy, occupational therapy, speech therapy, nutritional support, or any combination thereof. In various embodiments, the neurological disease is any one of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), or ALS with FTD.

[0059] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising Memantine, Rivastigmine, Galantamine, Donepezil, QRL-101, QRL-201, Aricept®, Exelon® (Rivastigmine), Razadyne®, Aducanumab, BAN2401, BIIB091 (gosuranemab), BIIB076, BIIB080 (IONIS-MAPTRx), Elayta (CT1812),

MK1942, allogenic hMSC, nilotinib, ABT-957, acitretin, ABT-354, GV1001, Riluzole, CAD106, CNP520, AD-35, Rilapladib, DHP1401, T-817 MA, TC-5619, TPI-287, RVT-101, LY450139, JNJ-54861911, Dapagliflozin, GSK239512, PF-04360365, ASP0777, SB-742457 (a 5-HT6 receptor antagonist), PF-03654746 (an H_3 receptor antagonist), GSK933776 (an Fc-inactivated anti-β amyloid (Aβ) monoclonal antibody (mAb)), Posiphen ((+)-phenserine tartrate), AMX0035 (ELYBRIO®), coenzyme Q10, aducanamab (ADUHLEM), memantine (NAMENDA), Namzeric, Suvorexant (belsomra), lecanemab, or any combination thereof. In various embodiments, the neurological disease is Alzheimer's Disease.

[0060] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising Levodopa, Carbidopa-levidopa, pramipexole (MIRAPEX), ropinirole (REQUIP), rotigotine (NEUPRO), apomorphine (APOKYN, KYNMOBI), selegiline (EDLEPRYL, ZELAPAR), rasagiline, entacapone (COMTAN), tolcapone (TASMAR), amantadine (GOCOVRI, SYMMETREL, OSMOLEX), trihexyphenidyl (ARTANE), BIIB054 (cinepanemab), BIIB094, BIIB118, ABBV-0805, zonisamide, deep brain stimulation, brain-derived neurotrophic factor, stem-cell transplant, Niacin, brain stem stimulation, nicotine, nabilone, PF-06649751, DNL201, LRRK2 inhibitors, CK1 inhibitors, isradipine, CLR4001, IRX4204, Yohimbine, coenzyme Q10, OXB-102, duloxetine, pioglitazone, preladenant, istradefylline (NOURIANZ), safinamide (XADAGO), benztropine (COGENTIN), opicapone (ongentys), exenatide, lingzhi, Caffeine, sarizotan, embryonic dopamine cell implantation, or any combination thereof. In various embodiments, the neurological disease is Parkinson's Disease.

[0061] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising UCB0107, ABBV-8E12, F-18 AV1451, BIIB092, C2N-8E12, tideglusib, deep transcranial magnetic stimulation, lipoic acid, tolfenamica acid, lithium, AZP2006, Glial Clell Line-Derived Neurotrophic Factor, NBMI, suvorxant, zolpidem, TPI 287, davunetide, pimavanserin, Levodopa, Carbidopa-levidopa, pramipexole, ropinirole, rotigotine, apomorphine, selegiline, rasagiline, entacapone, tolcapone, amantadine, trihexyphenidyl, BIIB054 (cinepanemab), BIIB094, BIIB118, ABBV-0805, zonisamide, deep

brain stimulation, brain-derived neurotrophic factor, stem-cell transplant, Niacin, brain stem stimulation, nicotine, nabilone, PF-06649751, DNL201, LRRK2 inhibitors, CK1 inhibitors, isradipine, CLR4001, IRX4204, Yohimbine, coenzyme Q10, OXB-102, duloxetine, pioglitazone, preladenant, or any combination thereof. In various embodiments, the neurological disease is progressive supranuclear palsy (PSP).

[0062] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising Tetrabenazine, deutetrabenazine, physical therapy, risperidone, haloperidol, chlorpromazine, clonazepam, diazepam, benzodiazepines, selective serotonin reuptake inhibitors. quetiapine, carbatrol, valproate, lamotrigine, pridopidine, delta-9-tetrahydrocannabinol, cannabidiol, stem-cell therapy, ISIS-443139, nilotinib, resveratrol, neflamapimod, fenofibrate, creatine, RO7234292, SAGE-718, WVE-120102, WVE-120101, dimebon, minocycline, deep brain stimulation, ursodiol, coenzyme Q10, OMS643762, VX15/2503, PF-02545920, BN82451B, SEN0014196, olanzapine, tiapridal (tiapride), or any combination thereof. In various embodiments, the neurological disease is Huntington's Disease.

[0063] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising anticoagulants, antidepressants, muscle relaxants, stimulants, anticonvulsants, anti-anxiety medication, erythropoietin, hyperbaric treatment, rehabilitation therapies (*e.g.*, physical, occupational, speech, psychological, or vocational counseling), or any combination thereof. In various embodiments, the neurological disease is brain trauma.

[0064] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising AXER-204, glyburide, 5-hydroxytryptophan (5-HTP), L-3,4-dihydroxyphenylalanine (L-DOPA), or rehabilitation therapies (*e.g.*, physical therapy, occupational therapy, recreational therapy, use of assistive devices, improved strategies

for exercise and healthy diets), or any combination thereof. In various embodiments, the neurological disease is spinal cord injury.

[0065] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising TPI-287, lithium, occupational, physical, and speech therapy, or any combination thereof can be selected as an additional therapy. In various embodiments, the neurological disease is corticobasal degeneration.

[0066] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising gabapentin, pregabalin, lamotrigine, carbamazepine, duloxetine, gabapentinoids, tricyclic antidepressants, serotonin-norepinephrine reuptake inhibitors, opioids, neurotoxin, dextromethorphan, nicotinamide riboside, auto-antibodies targeting neuronal antigens (TS-HDS and FGFR3), or any combination thereof. In various embodiments, the neuropathy is a chemotherapy induced neuropathy.

[0067] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising amantadine, armodafinil, baclofen, buspirone, carbamazepine, citalopram, clonazepam, desvenlafaxine, diazepam, duloxetine, escitalopram, flunarizine, fluoxetine, fluvoxamine, gabapentin, isoniazid, levetiracetam, levodopa, memantine, modafinil, ondansetron, paroxetine, pramipexole, primidone, riluzole, ropinirole, sertraline, tizanidine, topiramate, trihexyphenidyl, valproic acid, venlafaxine, BHV-4157, or a combination thereof. In various embodiments, the neurological disease is spinocerebellar ataxia.

[0068] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising Brivaracetam (briviact), cannabidiol (epidiolex), carbamazepine (carbatrol, Tegretol), cenobamate (xcopri), diazepam (valium),

lorazepam (Ativan), clonazepam (klonopin), eslicarbazepine (aptiom), ethosuximide (zarontin), felbamate (felbatol), fenfluramine (fintepla), lacosamide (VIMPAT), lamotrigine (Lamictal), levetiracetam (Keppra), oxcarbazepine (oxtellar xr, Trileptal), perampanel (fycompa), phenobarbital, phenytoin (dilantin), pregabalin (lyrica), tiagabine (gabitril), topiramate (topamax), valproate (depakene, depakote), zonisamide (zonegran), or any combination thereof. In various embodiments, the neurological disease is epilepsy.

[0069] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising nusinersen (SPINRAZA), onasemnogene abeparvovec-xioi (ZOLGENSMA), risdiplam (EVRYSDI), or any combination thereof. In various embodiments, the neurological disease is spinal muscular atrophy.

[0070] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising anti-seizure medications, speech therapy, physical therapy, occupational therapy, Adrabetadex, Arimoclomol, N-Acetyl-L-Leucine, or any combination thereof. In various embodiments, the neurological disease is Niemann-Pick disease type C.

[0071] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising physical and occupational therapies, orthopedic surgery, orthopedic devices, PXT3003, or any combination thereof. In various embodiments, the neurological disease is Charcot-Marie-Tooth Disease (CMT).

[0072] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising enzyme replacement therapy: idursulfase (Elaprase), surgical intervention (tonsillectomy and/or adenoidectomy), RGX-121 gene therapy,

adalimumab, MT2013-31, or any combination thereof. In various embodiments, the neurological disease is Mucopolysaccharidosis type II (MPSIIA).

[0073] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising physical, occupational, and speech therapies, contact lenses and artificial tears, genetic counseling, or any combination thereof. In various embodiments, the neurological disease is Mucolipidosis IV.

[0074] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising anticonvulsants, physical and occupational therapies, galactosidase, gene delivery of galactosidase, LYS-GM101 gene therapy, or any combination thereof. In various embodiments, the neurological disease is GM1 gangliosidosis.

[0075] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising physical and occupational therapies, use of devices such as braces, walkers, wheelchairs, immunosuppressants, BYM338, or any combination thereof. In various embodiments, the neurological disease is Sporadic inclusion body myositis (sIBM).

[0076] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer, a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second therapeutic agent selected from a group comprising corticosteroids, colchicine, dapsone, azathioprine, or any combination thereof. In various embodiments, the neurological disease is Henoch-Schonlein purpura (HSP).

[0077] Additionally disclosed herein is a method of treating a neurological disease and/or a neuropathy in a patient in need thereof, the method comprising administering to a patient in need thereof a therapeutically effective amount of a gapmer oligonucleotide, or a pharmaceutically acceptable salt thereof, or a pharmaceutical composition, in combination with a second

therapeutic agent selected from a group comprising enzyme replacement therapy, substrate reduction therapy, N-acetylcysteine, GZ/SAR402671, cerezyme, or any combination thereof. In various embodiments, the neurological disease is Gaucher's disease.

BRIEF DESCRIPTION OF THE DRAWINGS

[0078] Figure 1 shows an example antisense oligonucleotide (AON), a portion of which is complementary to a mRNA transcript or pre-mRNA transcript. Dashed lines indicate positions of the AON which may or may not be complementary to corresponding positions of the transcript.

DETAILED DESCRIPTION

[0079] The features and other details of the disclosure will now be more particularly described. Before further description of the present invention, certain terms employed in the specification, examples and appended claims are collected here. These definitions should be read in light of the remainder of the disclosure and understood as by a person of skill in the art. Unless defined otherwise, all technical and scientific terms used herein have the same meaning as commonly understood by a person of ordinary skill in the art.

Definitions

[0080] The terms "treat," "treatment," "treating," and the like are used herein to generally mean obtaining a desired pharmacological and/or physiological effect. The effect may be therapeutic in terms of partially or completely curing a disease and/or adverse effect attributed to the disease. The term "treatment" as used herein covers any treatment of a disease in a mammal, particularly a human, and includes: (a) inhibiting the disease, *i.e.*, preventing the disease from increasing in severity or scope; (b) relieving the disease, *i.e.*, causing partial or complete amelioration of the disease; or (c) preventing relapse of the disease, *i.e.*, preventing the disease from returning to an active state following previous successful treatment of symptoms of the disease or treatment of the disease.

[0081] "Preventing" includes delaying the onset of clinical symptoms, complications, or biochemical indicia of the state, disorder, disease, or condition developing in a subject that may be afflicted with or predisposed to the state, disorder, disease, or condition but does not yet experience or display clinical or subclinical symptoms of the state, disorder, disease, or condition. "Preventing" includes prophylactically treating a state, disorder, disease, or condition in or developing in a subject, including prophylactically treating clinical symptoms, complications, or biochemical indicia of the state, disorder, disease, or condition in or developing in a subject.

[0082] The term "pharmaceutically acceptable carrier" or "pharmaceutically acceptable excipient" as used herein interchangeably refers to any and all solvents, dispersion media, coatings, isotonic and absorption delaying agents, and the like, that are compatible with pharmaceutical administration. The use of such media and agents for pharmaceutically active substances is well known in the art. The compositions may also contain other active compounds providing supplemental, additional, or enhanced therapeutic functions.

[0083] The term "pharmaceutical composition" as used herein refers to a composition comprising at least one biologically active compound, for example, an antisense oligonucleotide (AON), as disclosed herein formulated together with one or more pharmaceutically acceptable excipients.

[0084] "Individual," "patient," or "subject" are used interchangeably and include any animal, including mammals, preferably mice, rats, other rodents, rabbits, dogs, cats, swine, cattle, sheep, horses, or non-human primates, and most preferably humans. The compounds of the invention can be administered to a mammal, such as a human, but can also be other mammals such as an animal in need of veterinary treatment, *e.g.*, domestic animals (*e.g.*, dogs, cats, and the like), farm animals (*e.g.*, cows, sheep, pigs, horses, and the like) and laboratory animals (*e.g.*, rats, mice, guinea pigs, non-human primates, and the like). In some embodiments, the mammal treated in the methods of the invention is desirably a mammal in whom modulation of a target expression and/or activity is desired.

[0085] As used herein, "PPM1A" (also known as Protein Phosphatase, Mg^{2+}/Mn^{2+} Dependent 1A, Protein Phosphatase 1A (Formerly 2C), Magnesium-Dependent, Alpha Isoform, Protein Phosphatase 1A, EC 3.1.3.16, Protein Phosphatase 2C Isoform Alpha, Protein Phosphatase IA, Phosphatase 2C Alpha, PP2C-Alpha, PPPM1A, and PP2CA) refers to the gene or gene products (*e.g.*, protein or mRNA transcript (including pre-mRNA) encoded by the gene) identified by Entrez Gene ID No. 5494 and allelic variants thereof, as well as orthologs found in non-human species (*e.g.*, non-human primates or mice).

[0086] As used herein, "ATXN2" (also known as Ataxin 2, ATX2, TNRC13, SCA2, Trinucleotide Repeat-Containing Gene 13 Protein, Spinocerebellar Ataxia Type 2 Protein, Ataxin-2, Spincocerebellar Ataxia 2 (Olivopontocerebellar Ataxia 2, Autosomal Dominant, Ataxin 2), and Trinucleotide Repeat Containing 13) refers to the gene or gene products (*e.g.*, protein or mRNA transcript (including pre-mRNA) encoded by the gene) identified by Entrez Gene ID No. 6311 and allelic variants thereof, as well as orthologs found in non-human species (*e.g.*, non-human primates or mice).

[0087] As used herein, "SOD1" (also known as Superoxide Dismutase 1, IPOA, Superoxide Dismutase 1, Soluble, Superoxide Dismutase [Cu-Zn], EC 1.15.1.1, HSod1, ALS1, ALS, Amyotrophic Lateral Sclerosis 1 (Adult), Epididymis Secretory Protein Li 44, Superoxide Dismutase, Cystolic, Cu/Zn Superoxide Dismutase, Indophenoloxidase A, SOD, Soluble, Homodimer, HEL-S-44, STAHP, and SOD) refers to the gene or gene products (*e.g.*, protein or mRNA transcript (including pre-mRNA) encoded by the gene) identified by Entrez Gene ID No. 6647 and allelic variants thereof, as well as orthologs found in non-human species (*e.g.*, non-human primates or mice).

[0088] As used herein, "MAPT" (also known as Microtubule Associated Protein Tau, MTBT1, PPP1R103, FTDP-17, MTBT2, MAPTL, PPND, MSTD, TAU, G Protein Beta1/Gamma2, Subunit-Interacting Factor, Protein Phosphatase 1, Regulatory Subunit 103, Microtubule-Associated Protein Tau, Neurofibrillary Tangle Protein, Paired Helical Filament-Tau, MGC138549, FLJ31424 , PHF-Tau, Tau-40, DDPAC, Tau, and Microtubule-Associated Protein Tau, Isoform 4) refers to the gene or gene products (*e.g.*, protein or mRNA transcript (including pre-mRNA) encoded by the gene) identified by Entrez Gene ID No. 4137 and allelic variants thereof, as well as orthologs found in non-human species (*e.g.*, non-human primates or mice).

[0089] In the present specification, the term "therapeutically effective amount" means the amount of the subject AON that will elicit the biological or medical response of a tissue, system, animal or human that is being sought by the researcher, veterinarian, medical doctor, or other clinician. The AONs of the invention are administered in therapeutically effective amounts to treat and/or prevent a disease, condition, disorder, or state, for example, ALS, FTD, ALS with FTD, or another motor neuron disease or neurological disease or condition. Alternatively, a therapeutically effective amount of an AON is the quantity required to achieve a desired therapeutic and/or prophylactic effect, such as an amount which results in the prevention of or a decrease in the symptoms associated with a disease disclosed herein.

[0090] As used herein, the term "antisense oligonucleotide" or "AON" encompasses antisense oligonucleotides that target genes or gene products of any of PPM1A, ATXN2, SOD1, or MAPT. "Antisense oligonucleotide" or "AON" encompass any of a parent oligonucleotide, an oligonucleotide variant, an oligonucleotide with one or more spacers, an oligonucleotide variant with one or more spacers, a gapmer antisense oligonucleotide (AON), and a gapmer AON with one or more spacers. Examples of antisense oligonucleotides include oligonucleotides comprising a sequence of any one of antisense oligonucleotide comprising any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354,

149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[0091] The terms "parent oligonucleotide," "parent antisense oligonucleotide," or "parent AON" refer to an antisense oligonucleotide that is complementary to a portion of a target gene product, such as any one of a PPM1A, ATXN2, SOD1, or MAPT mRNA or pre-mRNA transcript. Parent oligonucleotides do not include a spacer. In particular embodiments, parent oligonucleotides include 20 linked nucleosides. In such embodiments, parent oligonucleotides are 20mers. Examples of parent oligonucleotides are AONs with a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. As described hereafter, oligonucleotide with spacers, oligonucleotide variants, and gapmer AONs are described in relation to a corresponding parent oligonucleotide.

[0092] The term "oligonucleotide variant" refers to an antisense oligonucleotide that represents a modified version of a corresponding parent oligonucleotide. For example, an oligonucleotide variant represents a shortened version of a parent oligonucleotide. In various embodiments, an oligonucleotide variant is any one of a 15mer, 16mer, 17mer, 18mer 19mer, 20mer, 21mer, 22mer or 23mer. For example, an AON variant may be a shorter or longer version of a corresponding parent oligonucleotide that comprises a nucleobase sequence selected from any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566). Examples of oligonucleotide variants include oligonucleotides comprising a sequence of any one of SEQ ID NOs: 301590-301594. In various embodiments, oligonucleotide variants comprise one or more spacers.

[0093] The term "oligonucleotide with one or more spacers" or "oligonucleotide comprising a spacer" refers to an oligonucleotide with at least one spacer. An oligonucleotide with one or more spacers can, in various embodiments, include one spacer, two spacers, three spacers, four spacer, five spacers, six spacers, seven spacers, eight spacers, nine spacers, or ten spacers. In various embodiments, an oligonucleotide comprising one or more spacers includes at least one segment with at most 10 linked nucleosides. For example, as described in a 5' to 3' direction, an oligonucleotide comprising a spacer can include a segment with 10 linked nucleosides followed by a spacer, followed by a second segment of 9 linked nucleosides. In various embodiments, an oligonucleotide comprising one or more spacers includes at least one segment with at most 7 linked nucleosides. For example, as described in a 5' to 3' direction, an oligonucleotide comprising a spacer can include a segment with 7 linked nucleosides, followed by a spacer, a second segment with 9 linked nucleosides, followed by a second spacer, and a third segment with 7 linked nucleosides. Here, the first segment of 7 linked nucleosides and the third segment of 7 linked nucleosides each represents segments with 7 linked nucleosides. In various embodiments,

an oligonucleotide comprising one or more spacers includes at least one segment with at most 6 linked nucleosides. For example, as described in a 5' to 3' direction, an oligonucleotide comprising a spacer can include a segment with 6 linked nucleosides, followed by a spacer, a second segment with 6 linked nucleosides, followed by a second spacer, and a third segment with 6 linked nucleosides. Here, the first segment of 6 linked nucleosides, the second segement of 6 linked nucleosides, and the third segment of 6 linked nucleosides each represents segments with 6 linked nucleosides. Here, every segment of an oligonucleotide with one or more spacers has at most 6 linked nucleosides In various embodiments, the gapmer oligonucleotide comprises a segment with at most 10, 9, 8, 7, 6, 5, 4, 3, or 2 linked nucleosides.

[0094] As another example, an oligonucleotide comprising a spacer can include a segment with 10 linked nucleosides, followed by a spacer, a second segment with 10 linked nucleosides, followed by a second spacer, and a third segment with 3 linked nucleosides. Here, the third segment of 3 linked nucleosides represents the segment with at most 6 or at most 7 linked nucleosides. In various embodiments, an oligonucleotide with one or more spacers includes multiple segments with at most 6 or at most 7 linked nucleosides. In various embodiments, every segment of an oligonucleotide with one or more spacers has at most 6 or at most 7 linked nucleosides. For example, the oligonucleotide may be a 20mer and include two spacers that divide the 20mer into three separate segments of 6 linked nucleosides each. Therefore, each segment of the oligonucleotide has at most 6 linked nucleosides. For example, the oligonucleotide may be a 23mer and include two spacers that divide the 23mer into three separate segments of 7 linked nucleosides each. Therefore, each segment of the oligonucleotide has at most 7 linked nucleosides. Generally, oligonucleotides comprising one or more spacers are described in reference to a corresponding parent oligonucleotide or a corresponding oligonucleotide variant. Example oligonucleotides comprising one or spacers include any of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[0095] In various embodiments, one or more spacers may be located at one or more positions of an oligonucleotide. A spacer may be located between a first position and a second position of the oligonucleotide. As used herein, a spacer located between a first position and second position encompasses the spacer being located at the first position, located at the second position, or located at any position of the oligonucleotide sandwiched by the first position and the second position.

[0096] The term "gapmer antisense oligonucleotide," "gapmer AON," or "gapmer AON variant" refers to an AON with at least three distinct structural regions including a 5′-wing region, a central region, and a 3′-wing region, in '5→3' orientation. The central region comprises a

stretch of nucleosides that enable recruitment and activation of RNAseH. For example, the central region comprises linked DNA nucleosides, 2'-Fluoro Arabino Nucleic Acids (FANA), and Fluoro Cyclohexenyl nucleic acid (F-CeNA). Example gapmer AONs or gapmer oligonucleoide variants include any of SEQ ID NOs: 301595-301607. In various embodiments, gapmer AONs comprise a sequence that shares at least 85%, at least 90%, at least 95%, at least 98%, or 100% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In various embodiments, a gapmer AON may include one or more spacers. Example gapmer AONs comprising one or spacers comprise a sequence that shares at least 85%, at least 90%, at least 95%, at least 98% identity, or 100% identity with an equal length portion of any one of SEQ ID NOs: SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[0097] The term "pharmaceutically acceptable salt(s)" as used herein refers to salts of acidic or basic groups that may be present in antisense oligonucleotides used in the present compositions. Antisense oligonucleotides included in the present compositions that are basic in nature are capable of forming a wide variety of salts with various inorganic and organic acids. The acids that may be used to prepare pharmaceutically acceptable acid addition salts of such basic compounds are those that form non-toxic acid addition salts, *e.g.*, salts containing pharmacologically acceptable anions, including but not limited to malate, oxalate, chloride, bromide, iodide, nitrate, sulfate, bisulfate, phosphate, acid phosphate, isonicotinate, acetate, lactate, salicylate, citrate, tartrate, oleate, tannate, pantothenate, bitartrate, ascorbate, succinate, maleate, gentisinate, fumarate, gluconate, glucuronate, saccharate, formate, benzoate, glutamate, methanesulfonate, ethanesulfonate, benzenesulfonate, *p*-toluenesulfonate and pamoate (*e.g.*, 1,1'-methylene-bis-(2-hydroxy-3-naphthoate)) salts. Antisense oligonucleotides included in the present compositions that include an amino moiety may form pharmaceutically acceptable salts with various amino acids, in addition to the acids mentioned above. Compounds included in the present compositions that are acidic in nature are capable of forming base salts with various pharmacologically acceptable cations. Examples of such salts include alkali metal or alkaline earth metal salts and, particularly, calcium, magnesium, sodium, lithium, zinc, potassium, and iron salts. Pharmaceutically acceptable salts of the disclosure include, for example, pharmaceutically acceptable salts of AONs that include a nucleotide sequence of any of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[0098] Antisense oligonucleotides of the disclosure may contain one or more chiral centers, groups, linkages, and/or double bonds and, therefore, exist as stereoisomers, such as geometric

isomers, enantiomers or diastereomers. The term "stereoisomers" when used herein consist of all geometric isomers, enantiomers or diastereomers. These compounds may be designated by the symbols "*R*" or "*S*" (or "*R*p" or "*S*p") depending on the configuration of substituents around the stereogenic atom, for example, a stereogenic carbon, phosphorus, or sulfur atom. In some embodiments, one or more linkages of the compound may have a *R*p or *S*p configuration (*e.g.*, one or more phosphorothioate linkages have either a *R*p or *S*p configuration). The configuration of each phosphorothioate linkage may be independent of another phosphorothioate linkage (*e.g.*, one phosphorothioate linkage has a *R*p configuration and a second phosphorothioate linkage has a *S*p configuration). The present invention encompasses various stereoisomers of these compounds and mixtures thereof. Stereoisomers include enantiomers and diastereomers. Mixtures of enantiomers or diastereomers may be designated "(±)" in nomenclature, but the skilled artisan will recognize that a structure may denote a chiral center implicitly. Individual stereoisomers of antisense oligonucleotides of the present invention can be prepared synthetically from commercially available starting materials that contain asymmetric or stereogenic centers, or by preparation of racemic mixtures followed by resolution methods well known to those of ordinary skill in the art. These methods of resolution are exemplified by (1) attachment of a mixture of enantiomers to a chiral auxiliary, separation of the resulting mixture of diastereomers by recrystallization or chromatography and liberation of the optically pure product from the auxiliary, (2) salt formation employing an optically active resolving agent, or (3) direct separation of the mixture of optical enantiomers on chiral chromatographic columns. Stereoisomeric mixtures can also be resolved into their component stereoisomers by well-known methods, such as chiral-phase gas chromatography, chiral-phase super critical fluid chromatography, chiral-phase simulated moving bed chromatography, chiral-phase high performance liquid chromatography, crystallizing the compound as a chiral salt complex, or crystallizing the compound in a chiral solvent. Stereoisomers can also be obtained from stereomerically-pure intermediates, reagents, and catalysts by well-known asymmetric synthetic methods.

[0099] Individual stereoisomers antisense oligonucleotides of the present invention can be prepared synthetically from commercially available starting materials that contain asymmetric or stereogenic centers, or by preparation of racemic mixtures followed by resolution methods well known to those of ordinary skill in the art. These methods of resolution are exemplified by (1) attachment of a mixture of enantiomers to a chiral auxiliary, separation of the resulting mixture of diastereomers by recrystallization or chromatography and liberation of the optically pure product from the auxiliary, (2) salt formation employing an optically active resolving agent, or (3) direct separation of the mixture of optical enantiomers on chiral chromatographic columns.

Stereoisomeric mixtures can also be resolved into their component stereoisomers by well-known methods, such as chiral-phase super critical fluid chromatography, chiral-phase simulated moving bed chromatography, chiral-phase gas chromatography, chiral-phase high performance liquid chromatography, crystallizing the compound as a chiral salt complex, or crystallizing the compound in a chiral solvent. Stereoisomers can also be obtained from stereomerically-pure intermediates, reagents, and catalysts by well-known asymmetric synthetic methods.

[00100] The antisense oligonucleotides disclosed herein can exist in solvated as well as unsolvated forms with pharmaceutically acceptable solvents such as water, ethanol, and the like, and it is intended that the invention embrace both solvated and unsolvated forms.

[00101] The invention also embraces isotopically labeled compounds of the invention (*e.g.*, isotopically labeled antisense oligonucleotides) which are identical to those recited herein, except that one or more atoms are replaced by an atom having an atomic mass or mass number different from the atomic mass or mass number most abundantly found in nature. Examples of isotopes that can be incorporated into compounds of the invention include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorus, fluorine and chlorine, such as ^{2}H, ^{3}H, ^{11}C, ^{13}C, ^{14}C, ^{15}N, ^{18}O, ^{17}O, ^{31}P, ^{32}P, ^{35}S, ^{18}F, and ^{36}Cl, respectively.

[00102] Certain isotopically labeled disclosed compounds (*e.g.*, those labeled with ^{3}H and ^{14}C) are useful in compound and/or substrate tissue distribution assays. Tritiated (*i.e.*, ^{3}H), carbon-14 (*i.e.*, ^{14}C), or ^{35}S phosphorothioate isotopes are particularly preferred for their ease of preparation and detectability. Further, substitution with heavier isotopes such as deuterium (*i.e.*, ^{2}H) may afford certain therapeutic advantages resulting from greater metabolic stability (*e.g.*, increased *in vivo* half-life or reduced dosage requirements) and hence may be preferred in some circumstances.

[00103] As used herein, "2'-*O*-(2-methoxyethyl)" (also 2'-MOE and 2'-$O(CH_2)_2OCH_3$ and MOE) refers to an *O*-methoxyethyl modification of the 2' position of a furanose ring. A 2'-O-(2-methoxyethyl) is used interchangeably as "2'-*O*-methoxyethyl" in the present disclosure. A sugar moiety in a nucleoside modified with 2'-MOE is a modified sugar.

[00104] As used herein, "2'-MOE nucleoside" (also 2'-*O*-(2-methoxyethyl) nucleoside) means a nucleoside comprising a 2'-MOE modified sugar moiety.

[00105] As used herein, "2'-substituted nucleoside" means a nucleoside comprising a substituent at the 2'-position of the furanose ring other than H or OH. In certain embodiments, 2' substituted nucleosides include nucleosides with bicyclic sugar modifications.

[00106] As used herein, "5-methyl cytosine" (5-MeC) means a cytosine modified with a methyl group attached to the 5 position. A 5-methyl cytosine (5-MeC) is a modified nucleobase.

[00107] As used herein, "bicyclic sugar" means a furanose ring modified by the bridging of two atoms. A bicyclic sugar is a modified sugar.

[00108] As used herein, "bicyclic nucleoside" (also BNA) means a nucleoside having a sugar moiety comprising a bridge connecting two carbon atoms of the sugar ring, thereby forming a bicyclic ring system. In certain embodiments, the bridge connects the 4'-carbon and the 2'-carbon of the sugar ring.

[00109] As used herein, "cEt" or "constrained ethyl" means a bicyclic nucleoside having a sugar moiety comprising a bridge connecting the 4'-carbon and the 2'-carbon, wherein the bridge has the formula: 4'-$CH(CH_3)$—*O*-2'.

[00110] As used herein, "constrained ethyl nucleoside" (also cEt nucleoside) means a nucleoside comprising a bicyclic sugar moiety comprising a 4'-$CH(CH_3)$—*O*-2' bridge. In some embodiments, cEt can be modified. In some embodiments, the cEt can be *S*-cEt (in an *S*-constrained ethyl 2'-4'-bridged nucleic acid). In some other embodiments, the cEt can be *R*-cEt.

[00111] As used herein, "internucleoside linkage" refers to the atom or group that links the 3' and 5' position of the sugar or corresponding positions of a sugar mimetic. In some embodiments, as used herein, "non-natural linkage" refers to a "modified internucleoside linkage."

[00112] As used herein, "contiguous" in the context of an oligonucleotide refers to nucleosides, nucleobases, sugar moieties, or internucleoside linkages that are immediately adjacent to each other. For example, "contiguous nucleobases" means nucleobases that are immediately adjacent to each other in a sequence. As an example to the contrary, two nucleosides separated by a spacer are not contiguous.

[00113] As used herein, "modified nucleobase" means any nucleobase other than adenine, cytosine, guanine, thymine, or uracil. Examples of a modified nucleobase include 5-methyl cytosine, pseudouridine, or 5-methoxyuridine. An "unmodified nucleobase" means the purine bases adenine (A) and guanine (G), and the pyrimidine bases thymine (T), cytosine (C), and uracil (U).

[00114] As used herein, a "spacer" refers to a nucleoside-replacement group (*e.g.*, a non-nucleoside group that replaces a nucleoside present in a parent oligonucleotide). The spacer is characterized by the lack of a nucleotide base and by the replacement of the nucleoside sugar moiety with a non-sugar substitute. The non-sugar substitute group of a spacer lacks an aldehyde, ketone, acetal, ketal, hemiacetal or hemiketal group. The non-sugar substitute group of a spacer is thus capable of connecting to the 3' and 5' positions of the nucleosides adjacent to the spacer through an internucleoside linker as described herein, but not capable of forming a covalent bond with a nucleotide base (*i.e.*, not capable of linking a nucleobase to another group, such as an

internucleoside linkage, conjugate group, or terminal group in an oligonucleotide). Generally, an antisense oligonucleotide with a spacer is described in relation to a parent antisense oligonucleotide, wherein the spacer replaces a nucleoside of the parent antisense oligonucleotide. In all embodiments of the present disclosure, a spacer cannot hybridize to a nucleoside comprising a nucleobase at the corresponding position of a transcript (e.g., pre-mRNA or mRNA transcript), within the numerical order of the length of the AON (*i.e.*, if the spacer is positioned after nucleoside 4 of an AON (*i.e.*, at position 5 from the 5'-end), the spacer is not complementary to the nucleoside (A, C, G, or U) at the same corresponding position of the target transcript)).

[00115] As used herein, a "modified nucleoside" means a nucleoside having, independently, a modified sugar moiety and/or modified nucleobase. A universal base is a modified nucleobase that can pair with any one of the five unmodified nucleobases. Modified nucleosides include abasic nucleosides, which lack a nucleobase. However, modified nucleosides do not include spacers or other groups that are incapable of linking a nucleobase.

[00116] As used herein, "linked nucleosides" are nucleosides that are connected in a contiguous sequence (*i.e.*, no additional nucleosides are presented between those that are linked). In various embodiments, an oligonucleotide may have different segments of linked nucleosides connected through a spacer. Here, the spacer (*i.e.*, nucleoside replacement) is not considered a nucleoside and therefore, divides up the oligonucleotide into two segments of linked nucleosides. The oligonucleotide may have a first segment of Y linked nucleosides (*e.g.*, Y nucleosides that are connected in a contiguous sequence), followed by a spacer, and then a second segment of Z linked nucleosides. Here, the Y and Z linked nucleosides is described in either the 5' to 3' direction or the 3' to 5' direction. In various embodiments, the first segment consists of 7 or fewer linked nucleosides (e.g., Y = 7 or fewer) whereas the second segment comprises 8 or more linked nucleosides (*e.g.*, Z = 8 or more).

[00117] As used herein, "locked nucleic acid" or "LNA" or "LNA nucleosides" means nucleic acid monomers having a bridge (*e.g.*, methylene, ethylene, aminooxy, or oxyimino bridge) connecting two carbon atoms between the 4' and 2' position of the nucleoside sugar unit, thereby forming a bicyclic sugar. Examples of such bicyclic sugar include, but are not limited to (A) α-L-Methyleneoxy (4'-CH_2—O-2') LNA, (B) β-D-Methyleneoxy (4'-CH_2—O-2') LNA, (C) Ethyleneoxy (4'-$(CH_2)_2$—O-2') LNA, (D) Aminooxy (4'-CH_2—O—N(R)-2') LNA and (E) Oxyamino (4'-CH_2—N(R)—O-2') LNA; wherein R is H, C_1-C_{12} alkyl, or a protecting group (see U.S. Pat. No. 7,427,672, issued on Sep. 23, 2008).

[00118] As used herein, LNA compounds include, but are not limited to, compounds having at least one bridge between the 4' and the 2' position of the sugar wherein each of the bridges

independently comprises 1 or from 2 to 4 linked groups independently selected from —$[C(R_1)(R_2)]_n$ —, —$C(R_1)=C(R_2)$—, —$C(R_1)=N$—, —$C(=NR_1)$—, —C(=O)—, —C(=S)—, —O—, —$Si(R_1)_2$—, —$S(=O)_x$— and —$N(R_1)$ —; wherein: x is 0, 1, or 2; n is 1, 2, 3, or 4; each R_1 and R_2 is, independently, H, a protecting group, hydroxyl, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, a heterocycle radical, a substituted heterocycle radical, heteroaryl, substituted heteroaryl, C_5-C_7 alicyclic radical, substituted C_5-C_7 alicyclic radical, halogen, OJ_1, NJ_1J_2, SJ_1, N_3, $COOJ_1$, acyl (C(=O) —H), substituted acyl, CN, sulfonyl ($S(=O)_2$-J_1), or sulfoxyl (S(=O)- J_1); and each J_1 and J_2 is, independently, H, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, acyl (C(=O) —H), substituted acyl, a heterocycle radical, a substituted heterocycle radical, C_1-C_{12} aminoalkyl, substituted C_1-C_{12} aminoalkyl or a protecting group.

[00119] Examples of 4'-2' bridging groups encompassed within the definition of LNA include, but are not limited to one of formulae: —$[C(R_1)(R_2)]_n$ —, — $[C(R_1)(R_2)]_n$—O—, — $C(R_1R_2)$—N(R_1)—O— or —$C(R_1R_2)$—O—N(R_1)—. Furthermore, other bridging groups encompassed with the definition of LNA are 4'-CH_2-2', 4'-$(CH_2)_2$-2', 4'-$(CH_2)_3$-2', 4'-CH_2—O-2', 4'-$(CH_2)_2$—O-2', 4'- CH_2—O—N(R_1)-2' and 4'- CH_2—N(R_1)—O-2'- bridges, wherein each R_1 and R_2 is, independently, H, a protecting group or C_1-C_{12} alkyl.

[00120] Also included within the definition of LNA according to the invention are LNAs in which the 2'-hydroxyl group of the ribosyl sugar ring is connected to the 4' carbon atom of the sugar ring, thereby forming a bridge to form the bicyclic sugar moiety. The bridge can be a methylene (—CH_2—) group connecting the 2' oxygen atom and the 4' carbon atom, for which the term methyleneoxy (4'-CH_2—O-2') LNA is used. Furthermore, in the case of the bicyclic sugar moiety having an ethylene bridging group in this position, the term ethyleneoxy (4'-CH_2CH_2—O-2') LNA is used. A-L-methyleneoxy (4'-CH_2-O-2'), an isomer of methyleneoxy (4'-CH_2—O-2') LNA is also encompassed within the definition of LNA, as used herein.

[00121] As used herein, "hybridization" means the pairing or annealing of complementary oligonucleotides and/or nucleic acids. While not limited to a particular mechanism, the most common mechanism of hybridization involves hydrogen bonding, which may be Watson-Crick, Hoosteen or reversed Hoosteen hydrogen bonding between complementary nucleobases.

[00122] As used herein, "increasing the amount of activity" refers to more transcriptional expression, more accurate splicing resulting in full length mature mRNA and/or protein expression, and/or more activity relative to the transcriptional expression or activity in an untreated or control sample.

[00123] As used herein, "mismatch" or "non-complementary nucleobase" refers to the case when a group (e.g., nucleobase) of a first nucleic acid is not capable of pairing with the corresponding group (e.g., nucleobase) of a second or target nucleic acid.

[00124] As used herein, "modified internucleoside linkage" refers to a substitution or any change from a naturally occurring internucleoside linkage (*e.g.*, a phosphodiester internucleoside bond). "Phosphorothioate linkage" is a modified internucleoside linkage in which one of the non-bridging oxygen atoms of a phosphodiester internucleoside linkage is replaced with a sulfur atom.

[00125] As used herein, "modified oligonucleotide" means an oligonucleotide comprising at least one (*i.e.*, one or more) modified internucleoside linkage, modified sugar, and/or modified nucleobase.

[00126] As used herein, "modified sugar" or "modified sugar moiety" means a modified furanosyl sugar moiety or a modified sugar moiety having other than a furanosyl moiety that can link a nucleobase to another group, such as an internucleoside linkage, conjugate group, or terminal group in an oligonucleotide.

[00127] As used herein, "monomer" means a single unit of an oligomer. Monomers include, but are not limited to, nucleosides and nucleotides, whether naturally occurring or modified.

[00128] As used herein, "motif" means the pattern of unmodified and modified nucleosides in an antisense compound.

[00129] As used herein, "natural sugar moiety" means a sugar moiety found in DNA (2'-H) or RNA (2'-OH).

[00130] As used herein, "naturally occurring internucleoside linkage" means a 3' to 5' phosphodiester linkage.

[00131] As used herein, "nucleobase" means a heterocyclic moiety capable of pairing with a base of another nucleic acid.

[00132] As used herein, "nucleobase complementarity" refers to a nucleobase that is capable of base pairing with another nucleobase. For example, in DNA, adenine (A) is complementary to thymine (T). For example, in RNA, adenine (A) is complementary to uracil (U). In certain embodiments, complementary nucleobase refers to a nucleobase of an antisense compound that is capable of base pairing with a nucleobase of its target nucleic acid. For example, if a nucleobase at a certain position of an antisense compound is capable of hydrogen bonding with a nucleobase at a certain position of a target nucleic acid, then the position of hydrogen bonding between the oligonucleotide and the target nucleic acid is considered to be complementary at that nucleobase pair.

[00133] As used herein, "non-complementary nucleobases" refers to a pair of nucleobases that do not form hydrogen bonds with one another or otherwise support hybridization.

[00134] As used herein, "nucleic acid" refers to molecules composed of monomeric nucleotides. A nucleic acid includes, but is not limited to, ribonucleic acids (RNA), deoxyribonucleic acids (DNA), single-stranded nucleic acids, double-stranded nucleic acids, non-coding RNA, small interfering ribonucleic acids (siRNA), short-hairpin RNA (shRNA), circular RNA, circular DNA, and microRNAs (miRNA).

[00135] As used herein, "nucleobase sequence" means the order of nucleobases independent of any sugar, linkage, and/or nucleobase modification.

[00136] As used herein, "nucleoside" refers to a nucleobase linked to a sugar. The term "nucleoside" also includes a "modified nucleoside" which has independently, a modified sugar moiety and/or modified nucleobase.

[00137] As used herein, "oligonucleotide unit" refers to either a nucleoside (e.g., a nucleoside which includes a sugar and/or a nucleobase) or a nucleoside-replacement group (e.g., a spacer) of the oligonucleotide. An oligonucleotide unit encompasses nucleosides, modified nucleosides, and spacers. For example, an oligonucleotide may have 20 oligonucleotide units, wherein one of the oligonucleotide units is a spacer and the other 19 oligonucleotide units are nucleosides or modified nucleosides. As another example, an oligonucleotide may have 20 oligonucleotide units, wherein two of the oligonucleotide units are spacers, and the other 18 oligonucleotide units are nucleosides or modified nucleosides.

[00138] As used herein, "nucleoside mimetic" includes those structures used to replace the sugar or the sugar and the base and not necessarily the linkage at one or more positions of an oligomeric compound such as for example nucleoside mimetics having morpholino, cyclohexenyl, cyclohexyl, tetrahydropyranyl, bicyclo, or tricyclo sugar mimetics, *e.g.*, non-furanose sugar units. Nucleotide mimetic includes those structures used to replace the nucleoside and the linkage at one or more positions of an oligomeric compound such as for example peptide nucleic acids or morpholinos (morpholinos linked by a phosphorodiamidate or other non-phosphodiester linkage). Sugar surrogate overlaps with the slightly broader term nucleoside mimetic but is intended to indicate replacement of the sugar unit (furanose ring) only. The tetrahydropyranyl rings provided herein are illustrative of an example of a sugar surrogate wherein the furanose sugar group has been replaced with a tetrahydropyranyl ring system. "Mimetic" refers to groups that are substituted for a sugar, a nucleobase, and/or internucleoside linkage. Generally, a mimetic is used in place of the sugar or sugar-internucleoside linkage combination, and the nucleobase is maintained for hybridization to a selected target.

[00139] As used herein, "nucleotide" means a nucleoside having a phosphate group covalently linked to the sugar portion of the nucleoside.

[00140] As used herein, "oligomeric compound" or "oligomer" means a polymer of linked monomeric subunits which is capable of hybridizing to at least a region of a nucleic acid molecule.

[00141] As used herein, "oligonucleotide" means a polymer of one or more segments of linked nucleosides each of which can be modified or unmodified, independent one from another.

[00142] The disclosure provides methods for treating, ameliorating, or preventing a disease such as, but not limited to, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism, in a patient, comprising administering to a patient a composition comprising a therapeutically effective amount of an antisense oligonucleotide, and a pharmaceutically acceptable excipient.

[00143] Also provided herein are methods for treating, ameliorating, or preventing a disease, the method comprising administering to a patient a composition comprising a therapeutically effective amount of an antisense oligonucleotide and a pharmaceutically acceptable excipient. For example, in some embodiments, methods for treating, ameliorating, or preventing a disease comprise administering a pharmaceutically acceptable composition, for example, a pharmaceutically acceptable formulation, that includes one or more antisense oligonucleotides, to a patient. Antisense oligonucleotides disclosed herein can target transcripts (e.g., mRNA or pre-mRNA transcripts) of any one of PPM1A, ATXN2, SOD1, or MAPT. Antisense oligonucleotides can modulate expression of transcripts for treating a disease disclosed herein.

[00144] The present disclosure also provides pharmaceutical compositions comprising antisense oligonucleotides as disclosed herein formulated together with one or more pharmaceutically or cosmetically acceptable excipients. These formulations include those suitable for oral, sublingual, intratracheal, intranasal, vaginal, rectal, topical, transdermal, pulmonary, intrathecal, intracisternal, intrathecal, intrathalamic, intracerebroventricular, intraocular, buccal, and parenteral (*e.g.*, subcutaneous, intramuscular, intradermal, intraduodenal, or intravenous) administration, or for topical use, *e.g.*, as part of a composition suitable for applying topically to skin and/or mucous membrane, for example, a composition in the form of a gel, a paste, a wax, a cream, a spray, a liquid, a foam, a lotion, an ointment, a topical solution, a transdermal patch, a powder, a vapor, or a tincture. Although the most suitable form of administration in any given case will depend on the degree and severity of the condition being treated and on the nature of the particular antisense oligonucleotide being used.

[00145] The present invention also provides a pharmaceutical composition comprising an antisense oligonucleotide, or a pharmaceutically acceptable salt thereof. The present disclosure also provides methods that include the use of pharmaceutical compositions comprising antisense oligonucleotides as disclosed herein (*e.g.*, an AON comprising any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C) formulated together with one or more pharmaceutically acceptable excipients. Exemplary compositions provided herein include compositions comprising an antisense oligonucleotide, as described above, and one or more pharmaceutically acceptable excipients. Formulations include those suitable for oral, sublingual, intratracheal, intranasal, rectal, vaginal, topical, transdermal, pulmonary, intrathecal, intracisternal, intrathecal, intrathalamic, intracerebroventricular, intraocular, buccal, and parenteral (*e.g.*, subcutaneous, intramuscular, intradermal, intraduodenal, or intravenous) administration, or for topical use. The most suitable form of administration in any given case will depend on the clinical symptoms, complications, or biochemical indicia of the state, disorder, disease, or condition that one is trying to prevent in a subject; the state, disorder, disease, or condition one is trying to prevent in a subject; and/or on the nature of the particular compound and/or the composition being used.

Antisense Therapeutics

[00146] Antisense therapeutics are a class of nucleic acid-based compounds that can be used to inhibit gene expression. Antisense therapeutics may be single- or double-stranded deoxyribonucleic acid (DNA)-based, ribonucleic acid (RNA)-based, or DNA/RNA chemical

analogue compounds. In general, antisense therapeutics are designed to include a nucleotide sequence that is complementary or nearly complementary to an mRNA or pre-mRNA sequence of a given gene in order to promote binding between the antisense therapeutic and the pre-mRNA or mRNA. Examples of given genes disclosed herein include, but are not limited to PPM1A, ATXN2, SOD1, or MAPT.

[00147] Without being bound by theory, it is believed that in most instances antisense therapeutics act by binding to an mRNA or pre-mRNA, thereby inhibiting protein translation, altering pre-mRNA splicing into mature mRNA, and/or causing destruction of mRNA. In most instances, the antisense therapeutic nucleotide sequence is complementary to a portion of a targeted gene's, mRNA's, or pre-mRNA's sense sequence. Antisense therapeutics described herein are oligonucleotide-based compounds that include an oligonucleotide sequence complementary to a gene sense, pre-mRNA sense, and/or mRNA sense sequence, or a portion thereof. Antisense therapeutics described herein can also be nucleotide chemical analog-based compounds capable of binding to a gene sense, pre-mRNA sense, and/or mRNA sense sequence, or a portion thereof. Antisense therapeutics include antisense oligonucleotides, shRNAs, siRNAs, PNAs, LNAs, and morpholino oligomers.

[00148] Antisense oligonucleotides (AONs) are short oligonucleotide-based sequences that include an oligonucleotide sequence complementary to a target RNA sequence. AONs are typically between 8 to 50 nucleotides in length, for example, 18 nucleotides in length, 20 nucleotides in length, or 23 nucleotides in length. AONs may include chemically modified nucleosides (for example, 2'-O-methylated nucleosides or 2'-O-(2-methoxyethyl) nucleosides) as well as modified internucleoside linkages (for example, phosphorothioate linkages). AONs described herein include oligonucleotide sequences that are complementary to RNA sequences, such as mRNA or pre-mRNA transcripts. AONs described herein can include chemically modified nucleosides and modified internucleoside linkages (for example, phosphorothioate linkages).

[00149] Peptide nucleic acids (PNAs) are short, artificially synthesized polymers with a structure that mimics DNA or RNA. PNAs include a backbone composed of repeating N-(2-aminoethyl)-glycine units linked by peptide bonds. PNAs described herein can be used as antisense therapeutics that bind to mRNA or pre-mRNA sequences with high specificity and inhibit target gene expression.

[00150] Locked nucleic acids (LNAs) are oligonucleotide sequences that include one or more modified RNA nucleotides in which the ribose moiety is modified with an extra bridge connecting the 2' oxygen and 4' carbon. LNAs are believed to have higher Tm's than analogous

oligonucleotide sequences. LNAs described herein can be used as antisense therapeutics that bind to RNA sequences with high specificity and inhibit target gene expression.

[00151] Morpholino oligomers are oligonucleotide compounds that include DNA bases attached to a backbone of methylenemorpholine rings linked through phosphorodiamidate groups. Morpholino oligomers of the present invention can be designed to bind to specific RNA sequences of interest (for example, mRNA or pre-mRNA sequences of interest), thereby preventing gene expression. Morpholino oligomers described herein can be used as antisense therapeutics that bind to mRNA sequences with high specificity and inhibit gene expression. Morpholino oligomers described herein can also be used to bind pre-mRNA sequences, altering pre-mRNA splicing and gene expression.

[00152] Small hairpin RNAs (shRNAs) are generally RNA molecules with a hairpin-like structure that can be used to silence gene expression. shRNAs are generally expressed from plasmids encoding the shRNA sequence, and can be expressed from viral vectors to allow lentiviral, adenoviral, or adeno-associated viral expression. Without being bound by theory, it is believed that shRNA inhibits gene expression by taking advantage of RNA interference (RNAi) processes. In brief, the shRNA transcript is processed by Drosha and Dicer, and then loaded onto the RNA-induced silencing complex (RISC), allowing targeting of specific mRNA, and either mRNA degradation or repression of protein translation. shRNAs described herein can inhibit target gene expression.

[00153] Small interfering RNAs (siRNAs) are double-stranded RNA molecules of approximately 20-25 base pairs in length that take advantage of RNAi machinery (*e.g.*, Drosha and RISC) to bind and target mRNA for degradation. siRNAs are not dependent upon plasmids or vectors for expression, and can generally be delivered directly to a target cell, for instance, by transfection. siRNAs are double-stranded RNA sequences that include an RNA sequence complementary to a mRNA sequence, and which prevent protein translation.

[00154] The number of nucleotides included in an antisense therapeutic, for example, an antisense oligonucleotide described herein may vary. For example, in some embodiments, the antisense oligonucleotide is from 12 to 15 oligonucleotide units in length. In some embodiments, the antisense oligonucleotide is from 15 to 20 oligonucleotide units in length. In some embodiments, the antisense oligonucleotide is from 20 to 40 oligonucleotide units in length. In some embodiments, the antisense oligonucleotide is from 20 to 22 oligonucleotide units in length. In some embodiments, the antisense oligonucleotide is from 22 to 40 oligonucleotide units in length. In some embodiments, the antisense oligonucleotide is from 20 to 30, 25 to 35, or 30 to 40 oligonucleotide units in length. In particular embodiments, the antisense oligonucleotide is 18

oligonucleotide units in length. In particular embodiments, the antisense oligonucleotide is 20 oligonucleotide units in length. In particular embodiments, the antisense oligonucleotide is 23 oligonucleotide units in length.

Antisense Oligonucleotides

[00155] Antisense oligonucleotides (AONs) described herein are short synthetic oligonucleotide sequence complementary to a portion of a gene product, such as any of a PPM1A, ATXN2, SOD1, or MAPT transcript (for example, a PPM1A, ATXN2, SOD1, or MAPT mRNA transcript, or a PPM1A, ATXN2, SOD1, or MAPT pre-mRNA transcript).

[00156] In various embodiments, AONs include linked nucleosides with a nucleobase sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a portion of a target gene product, such as a mRNA or pre-mRNA sequence. In some embodiments, an AON can include a non-duplexed oligonucleotide. In some embodiments, an AON can include a duplex of two oligonucleotides where the first oligonucleotide includes a nucleotide sequence that is completely or almost completely complementary to a target mRNA sequence and the second oligonucleotide includes a nucleotide sequence that is complementary to the nucleotide sequence of the first oligonucleotide. AON binding specificity can be assessed via measurement of parameters such as dissociation constant, melting temperature (Tm), or other criteria such as changes in protein or RNA expression levels or other assays that measure target activity or expression.

[00157] An AON, such as disclosed herein, may be an oligonucleotide sequence of 5 to 100 oligonucleotide units in length, for example, 10 to 40 oligonucleotide units in length, for example, 14 to 40 oligonucleotide units in length, 10 to 30 oligonucleotide units in length, for example, 14 to 30 oligonucleotide units in length, for example, 14 to 25 oligonucleotide units in length, 15 to 22 oligonucleotide units in length, 18 to 21 oligonucleotide units in length, or 18, 19, 20, 21, 22, 23, 24, or 25 oligonucleotide units in length. In particular embodiments, an AON is 18 oligonucleotide units in length. In particular embodiments, an AON is 20 oligonucleotide units in length. In particular embodiments, an AON is 23 oligonucleotide units in length. In particular embodiments, an AON includes 20 linked nucleosides. As used herein, "parent oligonucleotides" refer to AONs including 20 linked nucleosides.

[00158] AONs described herein also include antisense oligonucleotides comprising the oligonucleotide sequences listed in Tables 1A-1D. Specifically, Table 1A shows example PPM1A AONs. In various embodiments, PPM1A AONs comprise a sequence of any one of SEQ ID NOs: 1-954. Table 1B shows example ATXN2 AONs. In various embodiments, ATXN2

AONs comprise a sequence of any one of SEQ ID NOs: 1914-149354. Table 1C shows example SOD1 AONs. In various embodiments, SOD1 AONs comprise a sequence of any one of SEQ ID NOs: 149362-158581. Table 1D shows example MAPT AONs. In various embodiments, MAPT AONs comprise a sequence of any one of SEQ ID NOs: 167805-301566.

[00159] In various embodiments, the AONs shown in Tables 1A-1D comprise at least one nucleoside linkage selected from a phosphorothioate linkage, an alkyl phosphate linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a phosphorodithioate linkage, a phosphotriester linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

[00160] In particular embodiments, disclosed herein are gapmer oligonucleotides comprising a sequence that shares at least 85% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In particular embodiments, disclosed herein are gapmer oligonucleotides comprising a sequence that shares at least 90% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In particular embodiments, disclosed herein are gapmer oligonucleotides comprising a sequence that shares at least 95% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In particular embodiments, disclosed herein are gapmer oligonucleotides comprising a sequence that shares at least 98% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C. In particular embodiments, disclosed herein are gapmer oligonucleotides comprising a sequence that shares 100% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, 167805-301566, SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

Oligonucleotide Variants

[00161] In various embodiments, AONs include different variants (e.g., AONs of different lengths), hereafter referred to as AON variants. An AON variant may be an oligonucleotide sequence of 5 to 100 nucleobases in length, for example, 10 to 40 nucleobases in length, for example, 14 to 40 nucleobases in length, 10 to 30 nucleobases in length, for example, 14 to 30 nucleobases in length, for example, 16 to 28 nucleobases in length, for example, 19 to 23 nucleobases in length, for example, 18 to 21 nucleobases in length, for example, or 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, or 30 nucleobases in length. An AON variant may be an oligonucleotide sequence complementary to a portion of a target mRNA sequence or a target pre-mRNA sequence.

[00162] In various embodiments, an AON variant represents a modified version of a corresponding parent oligonucleotide that includes a nucleobase sequence selected from any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In some embodiments, an AON variant includes a nucleobase sequence that represents a shortened version of a nucleobase sequence of an AON selected from any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. As one example, if a parent oligonucleotide includes a 20mer (*e.g.*, 20 nucleotide bases in length), a variant (*e.g.*, an AON variant) may include a shorter version (*e.g.*, 15mer, 16mer, 17mer, 18mer, or 19mer) of the 20mer parent oligonucleotide or a longer version (e.g., 21mer, 22mer, 23mer, 24mer, 25mer, 26mer, 27mer, 28mer, 29mer, or 30mer) of the 20mer parent oligonucleotide. In one embodiment, a nucleobase sequence of an AON variant differs from a corresponding nucleobase sequence of a parent oligonucleotide in that 1, 2, 3, 4, 5, or 6 nucleotide bases are removed from or added to one or both of the 3' and 5' ends of the nucleobase sequence of the parent oligonucleotide.

[00163] In one embodiment, the corresponding AON variant may include a 18mer where one nucleotide base was removed from each of the 3' and 5' end of a 20mer included in the parent oligonucleotide. For example, a 18mer AON variant may comprise a sequence in which one nucleotide base is removed from each of the 3' and 5' end of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566.

[00164] In one embodiment, the corresponding AON variant may include a 18mer where two nucleotide bases were removed from the 3' end of a 20mer included in the parent oligonucleotide. For example, a 18mer AON variant may comprise a sequence in which two nucleotide bases are removed from the 3' end of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In one embodiment, the corresponding AON variant may include a 18mer where two nucleotide bases were removed from the 5' end of a 20mer included in the parent oligonucleotide. For example, a 18mer AON variant may comprise a sequence in which two

nucleotide bases are removed from the 5' end of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566.

[00165] In one embodiment, the corresponding AON variant may include a 19mer where one nucleotide base was removed from either the 3' or 5' end of a 20mer included in the parent oligonucleotide. For example, a 19mer AON variant may comprise a sequence in which one nucleotide base is removed from the 3' end of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. For example, a 19mer AON variant may comprise a sequence in which one nucleotide base is removed from the 5' end of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566.

[00166] In one embodiment, the corresponding AON variant may include a 23mer where three nucleotide bases are added to either the 3' or 5' end of the 20mer included in the parent oligonucleotide. For example, a 19mer AON variant may comprise a sequence in which three nucleotide bases are added to either the 3' end or the 5' end of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566.

[00167] Example sequences of AON variants are shown below in Tables 2A-2B.

Table 2A. Example MAPT AON Variant Sequences.

SEQ ID NO:	Length	MAPT AON Sequence (5'-3')*
301590	18 oligonucleotide units	CCGTTTTCTTACCACCCT

Table 2B. Example PPM1A AON Variant Sequences

SEQ ID NO:	Length	PPM1A AON Sequence (5'-3')*
301591	23 oligonucleotide units	TCCACTTGGCAAACCGATCACAG
301592	23 oligonucleotide units	GTCCACTTGGCAAACCGATCACA
301593	23 oligonucleotide units	CCACTTGGCAAACCGATCACAGC
301594	23 oligonucleotide units	AGTCCACTTGGCAAACCGATCAC

In Tables 2A and 2B, "*" indicates that at least one nucleoside linkage of the nucleobase sequence is selected from a phosphorothioate linkage, an alkyl phosphate linkage, a phosphorodithioate linkage, a phosphotriester linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate

linkage, a thiophosphorodiamidate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

Gapmer AONs

[00168] In particular embodiments, AONs disclosed herein have a gapmer design or structure also referred to herein as "gapmer" or "gapmer AONs." In a gapmer structure the AON comprises at least three distinct structural regions including a 5′-wing region, a central region, and a 3′-wing region, in '5→3' orientation.

[00169] In various embodiments, the 5' wing region includes one, two, three, four, five, six, seven, eight, nine, or ten oligonucleotide units. In various embodiments, at least one of the oligonucleotide units of the 5' wing region includes a spacer. In various embodiments, the 5' wing region includes one, two, three, four, five, six, seven, eight, nine, or ten linked nucleosides. In various embodiments, the 3' wing region includes one, two, three, four, five, six, seven, eight, nine, or ten oligonucleotide units. In various embodiments, at least one of the oligonucleotide units of the 3' wing region includes a spacer. In various embodiments, the 3' wing region includes one, two, three, four, five, six, seven, eight, nine, or ten linked nucleosides. The 5' and 3' wing regions (also termed flanking regions) comprise at least one oligonucleotide unit that is adjacent to the central region, which, in some embodiments, comprises a stretch of contiguous nucleosides. The 5' and 3' wing regions may be symmetrical or asymmetrical with respect to the number of oligonucleotide units or linked nucleosides they include.

[00170] In various embodiments, the 5' wing region comprises one or more RNA nucleosides (e.g, ribonucleosides). In various embodiments, the 5' wing region comprises one or more DNA nucleosides (e.g, deoxyribonucleosides). In various embodiments, the 5' wing region comprises both RNA nucleosides and DNA nucleosides. In various embodiments, the 3' wing region comprises one or more RNA nucleosides. In various embodiments, the 3' wing region comprises one or more DNA nucleosides. In various embodiments, the 3' wing region comprises both RNA nucleosides and DNA nucleosides.

[00171] In various embodiments, the central region includes one, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, or twenty oligonucleotide units. In various embodiments, the central region includes one, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen,

sixteen, seventeen, eighteen, nineteen, or twenty linked nucleosides. In some embodiments, the central region comprises a stretch of nucleosides that enable recruitment and activation of RNAseH. In some embodiments, the central region comprises one or more of linked DNA nucleosides, 2'-Fluoro Arabino Nucleic Acids (FANA), and Fluoro Cyclohexenyl nucleic acid (F-CeNA). In some embodiments, all nucleosides of the central region are DNA nucleosides. In some embodiments, the central region comprises a contiguous stretch of 5-16 DNA nucleosides. In some embodiments, the central region comprises a contiguous stretch of 6-15, 7-14, 8-13, or 9-11 DNA nucleosides. In various embodiments, the central region comprises a mix of DNA nucleosides and RNA nucleosides. In various embodiments, at least one oligonucleotide unit of the central region is a spacer. In some embodiments, one oligonucleotide unit of the central region is a spacer. In some embodiments, two oligonucleotide units of the central region are spacers.

[00172] In some embodiments, all of the nucleosides of the central region are DNA nucleosides. In further embodiments the central region may consist of a mixture of DNA nucleosides and other nucleosides (2'-Fluoro Arabino Nucleic Acids (FANA), and Fluoro Cyclohexenyl nucleic acid (F-CeNA)) capable of mediating RNase H cleavage. In some embodiments, at least 50% of the nucleosides of the central region are DNA nucleosides, such as at least 60%, at least 65%, at least 70%, at least 75%, at least 80%, at least 85%, at least 90%, at least 95%, or 100% DNA nucleosides.

[00173] In particular embodiments, the AON includes a 5' wing region of 5 linked nucleosides, a central region of 10 linked nucleosides, and a 3' wing region of 5 linked nucleosides, also referred to as a 5-10-5 gapmer. In particular embodiments, the AON includes a 5' wing region of 3 linked nucleosides, a central region of 8 linked nucleosides, and a 3' wing region of 3 linked nucleosides, also referred to as a 3-8-3 gapmer. In particular embodiments, the AON includes a 5' wing region of 3 linked nucleosides, a central region of 10 linked nucleosides, and a 3' wing region of 3 linked nucleosides, also referred to as a 3-10-3 gapmer. In particular embodiments, the AON includes a 5' wing region of 4 linked nucleosides, a central region of 10 linked nucleosides, and a 3' wing region of 4 linked nucleosides, also referred to as a 4-10-4 gapmer. In particular embodiments, the AON includes a 5' wing region of 4 linked nucleosides, a central region of 8 linked nucleosides, and a 3' wing region of 4 linked nucleosides, also referred to as a 4-8-4 gapmer. In various embodiments, at least one of the nucleosides in any of the 3' wing region, 5' wing region, or central is replaced with a spacer. Embodiments of gapmer AONs with one or more spacers is described in further detail herein.

[00174] In particular embodiments, gapmer AONs discloed herein comprise a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, wherein the gapmer AON includes a 5' wing region comprising one or more RNA nucleosides, a central region comprising one or more DNA nucleosides, and a 3' wing region comprising one or more RNA nucleosides. In particular embodiments, gapmer AONs discloed herein comprise a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 are 5-10-5 gapmers (e.g., 5' wing region of 5 linked nucleosides, a central region of 10 linked nucleosides, and a 3' wing region of 5 linked nucleosides). In particular embodiments, gapmer AONs discloed herein comprise a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 are 6-11-6 gapmers (e.g., 5' wing region of 6 linked nucleosides, a central region of 11 linked nucleosides, and a 3' wing region of 6 linked nucleosides). In particular embodiments, gapmer AONs disclosed herein comprise a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 are 5-8-5 gapmers (e.g., 5' wing region of 5 linked nucleosides, a central region of 8 linked nucleosides, and a 3' wing region of 5 linked nucleosides).

[00175] Further example Gapmer AONs described herein can include those identified below in Tables 3A-3D. Specifically, Table 3A shows example PPM1A gapmer AONs, Table 3B shows example ATXN2 gapmer AONs, Table 3C shows example SOD1 gapmer AONs, and Table 3D shows example MAPT gapmer AONs. In various embodiments, all cytosines of gapmer AONs shown in Tables 3A-3D are 5 methylcytosines (5-MeC).

Table 3A: Example PPM1A Gapmer AONs and Gapmer variant AONs. In the gapmer structure, "e" refers to a ribonucleoside, such as a 2'-MOE modified ribonucleoside, and "d10" or "d11" denotes 10 or 11 DNA deoxyribonucleosides, respectively

SEQ ID NO:	PPM1A AON Sequence (5'-3')	Gapmer structure
301595	TCCACTTGGCAAACCGATCACAG	eeeeee-d11-eeeeee
301596	GTCCACTTGGCAAACCGATCACA	eeeeee-d11-eeeeee

301604	TGTACTTCACATTTGGAGCC	eeeee-d10-eeeee

Table 3C: Example SOD1 Gapmer AON. In the gapmer structure, "e" refers to a ribonucleoside, such as a 2'-MOE modified ribonucleoside, and "d10" denotes 10 deoxyribonucleosides.

SEQ ID NO:	SOD1 AON Sequence (5'-3')	Gapmer structure
301605	CAGGATACATTTCTACAGCT	eeeee-d10-eeeee

Table 3D: Example MAPT Gapmer AONs and Gapmer variant AONs. In the gapmer structure, "e" refers to a ribonucleoside, such as a 2'-MOE modified ribonucleoside, and "d8" or "d10" denotes 8 or 10 deoxyribonucleosides, respectively.

SEQ ID NO:	MAPT AON Sequence (5'-3')	Gapmer structure
301606	CCGTTTTCTTACCACCCT	eeeee-d8-eeeee
301607	CCGTTTTCTTACCACCCTAA	eeeee-d10-eeeee

[00176] In various embodiments, gapmer AONs, such as gapmer AONs comprising a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or any of the gapmer AON sequences shown in Tables 3A-3D (e.g., SEQ ID NOs: 301595-301607), include a mixture of ribonucleosides and deoxyribonucleosides (including modified ribonucleosides and/or modified deoxyribonucleosides) in the 5' wing region and/or the 3' wing region.

[00177] In particular embodiments, gapmer AONs, such as gapmer AONs comprising a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or any of the gapmer AON sequences shown in Tables 3A-3D (e.g., SEQ ID NOs: 301595-301607), include modified ribonucleosides in the 5' wing region and/or the 3' wing region. In particular embodiments, each nucleoside in the 5' wing region and the 3' wing region is a modified nucleoside e.g., a 2'-O-(2-methoxyethyl) (2'-MOE) nucleoside. For example, each guanonsine in the 5' wing region or 3' wing region may be a modified 2'-O-(2-methoxyethyl)guanosine. For example, each adenosine in the 5' wing region or 3' wing region may be a modified 2'-O-(2-methoxyethyl)adenosine. For example, each cytosine in the 5' wing region and 3' wing region may be a 2'-O-(2-methoxyethyl)-5-methylcytosine. For example, each thymidine in the 5' wing region and the 3' wing region may be a 2'-O-(2-methoxyethyl)thymidine.

[00178] In various embodiments, examplary gapmer AONs have one or more modified internucleoside linkages, such as any of a phosphorothioate linkage, an alkyl phosphate linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a phosphorodithioate linkage, a phosphotriester linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

Antisense Oligonucleotides with One or more Spacers

[00179] Embodiments disclosed herein include antisense oligonucleotides (AONs) comprising one or more spacers. In particular embodiments, an AON includes one spacer. In particular embodiments, an AON includes two spacers. In particular embodiments, an AON includes three spacers. Generally, a spacer refers to a nucleoside-replacement group lacking a nucleobase and wherein the nucleoside sugar moiety is replaced by a non-sugar substitute group. The non-sugar substitute group is not capable of linking to a nucleobase, but is capable of linking with the 3' and 5' positions of nucleosides adjacent to the spacer through an internucleoside linking group.

[00180] In various embodiments, AONs with one or more spacers include parent AONs (e.g., antisense oligonucleotides that are complementary to a portion of a target gene product, such as any one of a PPM1A, ATXN2, SOD1, or MAPT mRNA transcript) in which one or more of the nucleosides of the parent oligonucleotides (e.g., any of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566) are replaced with a spacer.

[00181] In various embodiments, AONs with one or more spacers include oligonucleotide variants (e.g., an antisense oligonucleotide that represents a modified version (e.g., shorter or longer) of a corresponding parent oligonucleotide) in which one or more of the nucleosides of the oligonucleotide variants (e.g., a shorter or longer version of a corresponding parent oligonucleotide that includes a nucleobase sequence selected from any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566) are replaced with a spacer.

[00182] In various embodiments, AONs with one or more spacers include gapmer AONs which include at least three distinct structural regions (e.g., a 5′-wing region, a central region, and a 3′-wing region, in '5→3' orientation), in which one or more of the nucleosides of the gapmer AONs (e.g., gapmer AONs comprising a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or any of the gapmer AON sequences shown in Tables 3A-3D (e.g., SEQ ID NOs: 301595-301607)) are replaced with a spacer. In particular embodiments, for a gapmer AON with one or more spacers, a nucleoside in the 5'-wing region is replaced with a spacer. In particular embodiments, for a gapmer AON with one or more spacers, a nucleoside in the 3'-wing region is replaced with a spacer. In particular embodiments, for a gapmer AON with one or more spacers, a nucleoside in the central region is replaced with a spacer. In particular embodiments, for a gapmer AON with one or more spacers, a nucleoside in the 5'-wing region is replaced with a spacer and a nucleoside in the central region is replaced with a spacer. In particular embodiments, for a gapmer AON with one or more spacers, a nucleoside in the 5'-wing region is replaced with a spacer and a nucleoside in the 3'-wing region is replaced with a spacer. In particular embodiments, for a gapmer AON with one or more spacers, a nucleoside in the central region is replaced with a spacer and a nucleoside in the 3'-wing region is replaced with a spacer.

[00183] In particular embodiments, the gapmer oligonucleotide comprises sugar modifications in any of the following patterns: eeeee-d10-eeeee, eeeee-d8-eeeee, eeeeee-d11-eeeeee, eee-d8-eee, eee-d10-eee, eeee-d10-eeee, and eeee-d8-eeee, wherein e = 2'-MOE nucleoside and d = a deoxyribonucleoside. In such embodiments, a spacer may replace at least one "e" (e.g., a 2'-MOE nucleoside) or may replace at least one "d" (e.g., a deoxyribonucleoside) in the gapmer oligonucleotide.

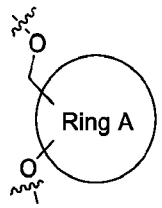
[00184] As used herein, an "AON with one or more spacers" refers to any of a parent AON (e.g., any of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566) with one or more spacers, an AON variant (e.g., a shorter or longer version of a corresponding parent oligonucleotide that comprises a nucleobase sequence selected from any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566) with one or more spacers, or a gapmer

AON (e.g., a gapmer AON comprising a sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or any of the gapmer AON sequences shown in Tables 3A-3D (e.g., SEQ ID NOs: 301595-301607)) with one or more spacers. In certain embodiments, an AON with one or more spacers may be an oligonucleotide with 5 to 100 oligonucleotide units in length, for example, 10 to 60 oligonucleotide units in length, for example, 12 to 50 oligonucleotide units in length, 14 to 40 oligonucleotide units in length, 10 to 30 oligonucleotide units in length, for example, 14 to 30 oligonucleotide units in length, for example, 14 to 25 or 15 to 22 oligonucleotide units in length, or 18, 19, 20, 21, 22, 23, 24, or 25 oligonucleotide units in length. As used herein, an "oligonucleotide unit" refers to either a nucleoside (e.g., a nucleoside which includes a sugar and/or a nucleobase) or a nucleoside-replacement group (e.g., a spacer) of the oligonucleotide.

[00185] In particular embodiments, AONs with one or more spacers are 25 oligonucleotide units in length. In particular embodiments, AONs with one or more spacers are 23 oligonucleotide units in length. In particular embodiments, AONs with one or more spacers are 21 oligonucleotide units in length. In particular embodiments, AONs with one or more spacers are 20 oligonucleotide units in length. In particular embodiments, AONs with one or more spacers are 19 oligonucleotide units in length. In particular embodiments, AONs with one or more spacers are 18 oligonucleotide units in length. In various embodiments, AONs with one or more spacers are at least 15, at least 16, at least 17, at least 18, at least 19, at least 20, at least 21, at least 22, at least 23, at least 24, or at least 25 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 15 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 16 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 17 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 18 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 19 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 20 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 21 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 22 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 23 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 24 oligonucleotide units in length. In various embodiments, the AONs with one or more spacers are at least 25 oligonucleotide units in length.

[00186] In various embodiments, an AON with one or more spacers comprises a sequence that shares at least 80% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In various embodiments, an AON with one or more spacers comprises a sequence that shares at least 85% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In various embodiments, an AON with one or more spacers comprises a sequence that shares at least 90% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In various embodiments, an AON with one or more spacers comprises a sequence that shares at least 95% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566. In various embodiments, an AON comprises a sequence that shares 98% identity with an equal length portion of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566.

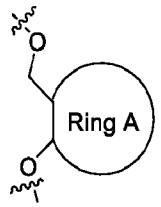
[00187] In some embodiments, the spacer is of Formula (X):



Formula (X)

wherein ring A is as defined herein.

[00188] In some embodiments, the spacer is of Formula (Xa):

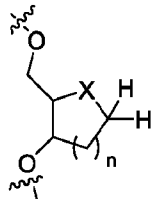


Formula (Xa)

wherein ring A is as defined herein and the -CH_2-O- group is on a ring A atom adjacent to the -O- group.

[00189] As generally defined herein, ring A of formulae (X) and (Xa), is an optionally substituted 4-8 member monocyclic cycloalkyl group (*e.g.* ring A is cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl) or a 4-8 member monocyclic heterocyclyl group, wherein the heterocyclyl group contains 1 or 2 heteroatoms selected from O, S and N (*e.g.* ring A is oxetanyl, tetrahydrofuranyl, tetrahydropyranyl, 1,4-dioxanyl, pyrrolidinyl, piperidinyl, piperazinyl, morpholinyl, azepanyl). In some embodiments, ring A is tetrahydrofuranyl. In some embodiments, ring A is tetrahydropyranyl. In some embodiments, ring A is pyrrolidinyl. In some embodiments, ring A is cyclopentyl. In some embodiments, the monocyclic cycloalkyl or monocyclic heterocyclyl is not further substituted. In some embodiments, the cycloalkyl or

heterocyclyl is further substituted with 0, 1, 2 or 3 substituents selected from halo (*e.g.*, -F, -Cl), -OMe, -OEt -O(CH_2)OMe, -O(CH_2)$_2$OMe and CN. In some embodiments, the spacer is represented by Formula (I), wherein:

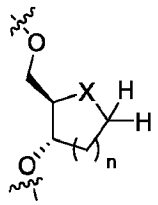


Formula (I)

X is selected from -CH_2- and -O-; and

n is 0, 1, 2 or 3.

[00190] In some embodiments, the spacer is represented by Formula (I'), wherein:

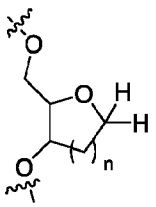


Formula (I')

X is selected from -CH_2-and -O-; and

n is 0, 1, 2 or 3.

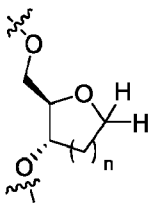
[00191] In some embodiments, the spacer is represented by Formula (Ia), wherein:



Formula (Ia)

and n is 0, 1, 2 or 3.

[00192] In some embodiments, the spacer is represented by Formula (Ia'), wherein:



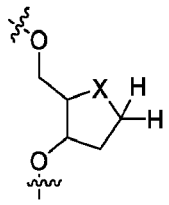
Formula (Ia')

and n is 0, 1, 2 or 3.

[00193] As generally defined herein, X is selected from -CH_2- and -O-. In some embodiments, X is -CH_2-. In other embodiments, X is -O-.

[00194] As generally defined herein, n is 0, 1, 2 or 3. In some embodiments, n is 0. In some embodiments, n is 1 or 2. In some embodiments, n is 1. In other embodiments, n is 2. In certain embodiments, n is 3.

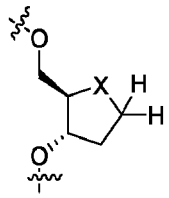
[00195] In some embodiments, the spacer is represented by Formula (II), wherein:



Formula (II)

X is selected from -CH_2- and -O-.

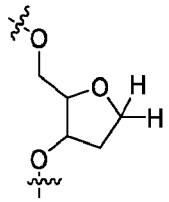
[00196] In some embodiments, the spacer is represented by Formula (II'), wherein:



Formula (II')

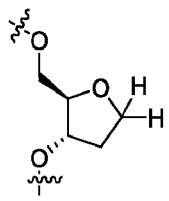
X is selected from -CH_2-and -O.

[00197] In some embodiments, the spacer is represented by Formula (Iia), wherein:



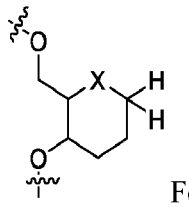
Formula (Iia).

[00198] In some embodiments, the spacer is represented by Formula (Iia'), wherein:



Formula (Iia').

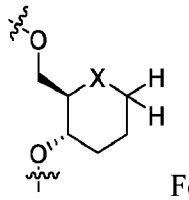
[00199] In some embodiments, the spacer is represented by Formula (III), wherein:



Formula (III)

X is selected from -CH_2- and -O-.

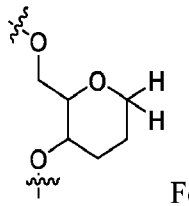
[00200] In some embodiments, the spacer is represented by Formula (III'), wherein:



Formula (III')

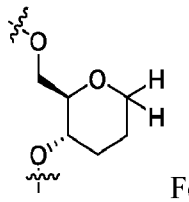
X is selected from -CH_2-and -O.

[00201] In some embodiments, the spacer is represented by Formula (IIIa), wherein:



Formula (IIIa).

[00202] In some embodiments, the spacer is represented by Formula (IIIa'), wherein:



Formula (IIIa').

[00203] In some embodiments, the open positions of Formulae (I), (I'), (Ia), (Ia'), (II), (II'), (Iia), (Iia'), (III), (III'), (IIIa) and (IIIa') (*i.e.*, the positions not specifically depicted as bearing exclusively hydrogen atoms, including the -CH_2- group of X) are further substituted with 0-3 substituents selected from halo (*e.g.*, -F, -Cl), -OMe, -OEt -O(CH_2)OMe, -O(CH_2)$_2$OMe and CN. In some embodiments, Formulae (I), (I'), (Ia), (Ia'), (II), (II'), (Iia), (Iia'), (III), (III'), (IIIa) and (IIIa') are not further substituted.

[00204] As described further below, an AON with one or more spacers is described in reference to a corresponding parent oligonucleotide, to a corresponding oligonucleotide variant, or to a corresponding gapmer oligonucleotide. In various embodiments, an oligonucleotide with one or

more spacers differs from a parent oligonucleotide, an oligonucleotide variant, or a gapmer oligonucleotide in that each of the one or more spacers replaces a nucleoside in parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. As used hereafter, the "position" of the oligonucleotide refers to a particular location as counted from the 5' end of the oligonucleotide. In various embodiments, the spacer replaces a nucleoside at any one of positions 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, or 25 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 7 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 8 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 11 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 14 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 16 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 19 of the parent oligonucleotide, of the oligonucleotide variant, or of the gapmer oligonucleotide. In particular embodiments, a spacer replaces a nucleoside at position 22 of the oligonucleotide variant or of the gapmer oligonucleotide.

[00205] In various embodiments, an oligonucleotide includes one spacer that replaces a nucleoside in the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide (e.g., one spacer replaces one nucleoside of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide). Example oligonucleotides with one spacer are shown below in Table 4A. In particular embodiments, the spacer replaces a nucleoside between positions 9 and 15 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside between positions 9 and 12 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside at position 9 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside at position 10 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside at position 11 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside at position 12 of the parent oligonucleotide, oligonucleotide

variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside between positions 12 and 16 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the spacer replaces a nucleoside at position 15 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide.

[00206] In various embodiments, an oligonucleotide including one spacer has 2 segments, where at least one of the 2 segments has at most 11 linked nucleosides. For example, the oligonucleotide may be 23 oligonucleotide units in length, and the spacer can be located at position 12. Therefore, the oligonucleotide has 2 segments divided by the spacer, where both of the 2 segments are 11 nucleosides in length. In various embodiments, an oligonucleotide including one spacer has 2 segments, where at least one of the 2 segments has at most 10 linked nucleosides. For example, the oligonucleotide may be 21 oligonucleotide units in length, and the spacer can be located at position 11. Therefore, the oligonucleotide has 2 segments divided by the spacer, where both of the 2 segments are 10 nucleosides in length. As another example, the oligonucleotide may be 25 oligonucleotide units in length, and the spacer can be located at position 15. Therefore, the oligonucleotide has 2 segments divided by the spacer, where one of the 2 segments is 14 nucleobases in length and the second of the 2 segments is 10 nucleobases in length. As another example, the oligonucleotide may be 20 oligonucleotide units in length, and the spacer can be located at position 11. Therefore, the oligonucleotide has 2 segments divided by the spacer, where one of the 2 segments is 10 nucleobases in length and the second of the 2 segments is 9 nucleobases in length. As another example, the oligonucleotide may be 18 oligonucleotide units in length, and the spacer can be located at position 11. Therefore, the oligonucleotide has 2 segments divided by the spacer, where one of the 2 segments is 10 nucleobases in length and the second of the 2 segments is 7 nucleobases in length. As another example, the oligonucleotide may be 18 oligonucleotide units in length, and the spacer can be located at position 9. Therefore, the oligonucleotide has 2 segments divided by the spacer, where one of the 2 segments is 8 nucleobases in length and the second of the 2 segments is 9 nucleobases in length.

[00207] In various embodiments, an oligonucleotide includes two spacers that each replace a nucleoside in the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide (e.g., two spacers replace two separate nucleosides of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide). Example oligonucleotides with two spacers are shown below in Table 4B and Table 4C. In various embodiments, a first spacer and a second spacer are separated by at least 5 nucleobases, at least 6 nucleobases, at least 7 nucleobases, at least 8 nucleobases, at least 9 nucleobases, or at least 10 nucleobases in the oligonucleotide. In particular

embodiments, a first spacer and a second spacer are separated by at least 5 nucleobases, at least 6 nucleobases, or at least 7 nucleobases. In particular embodiments, the first spacer and the second spacer are not adjacent to one another in the oligonucleotide.

[00208] In particular embodiments, the first spacer replaces a nucleoside between positions 7 and 11 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In various embodiments, the first spacer replaces a nucleoside between positions 8 and 11, positions 9 and 11, positions 10 and 11, positions 7 and 10, positions 7 and 9, positions 7 and 8, positions 8 and 10, positions 8 and 9, or positions 9 and 10 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the second spacer replaces a nucleoside between positions 14 and 22 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In various embodiments, the second spacer replaces a nucleoside between positions 15 and 22, positions 16 and 22, positions 17 and 22, position 18 and 22, position 19 and 22, positions 20 and 22, positions 21 and 22, positions 15 and 21, position 16 and 21, positions 17 and 21, positions 18 and 21, positions 19 and 21, positions 20 and 21, positions 15 and 20, positions 16 and 20, positions 17 and 20, positions 18 and 20, positions 19 and 20, positions 15 and 19, positions 16 and 19, positions 17 and 19, positions 18 and 19, positions 15 and 18, position 16 and 18, position 17 and 18, positions 15 and 17, positions 16 and 17, or positions 15 and 16 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide.

[00209] In preferred embodiments, the first spacer replaces a nucleoside at position 7 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 14 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In preferred embodiments, the first spacer replaces a nucleoside at position 7 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 15 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In preferred embodiments, the first spacer replaces a nucleoside at position 7 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 19 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In preferred embodiments, the first spacer replaces a nucleoside at position 8 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 16 of the K parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In preferred embodiments, the first spacer replaces a nucleoside at position 11 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 19 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In

preferred embodiments, the first spacer replaces a nucleoside at position 11 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 22 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In preferred embodiments, the first spacer replaces a nucleoside at position 9 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 19 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In preferred embodiments, the first spacer replaces a nucleoside at position 5 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide and the second spacer replaces a nucleoside at position 17 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide.

[00210] In various embodiments, an oligonucleotide includes three spacers that each replace a nucleoside in the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide (e.g., three spacers replace three separate nucleosides of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide). In particular embodiments, the first spacer replaces a nucleoside between positions 7 and 11 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the second spacer replaces a nucleoside between positions 14 and 22 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the third spacer replaces a nucleoside between positions 21 and 24 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In some embodiments, the first spacer replaces a nucleoside between positions 2 and 5 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the second spacer replaces a nucleoside between positions 8 and 12 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. In particular embodiments, the third spacer replaces a nucleoside between positions 18 and 22 of the parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide.

[00211] In various embodiments, the three spacers in an oligonucleotide are positioned such that each of the four segments of the oligonucleotide are at most 7 linked nucleosides in length. For example, an oligonucleotide may have a first segment with 7 linked nucleosides connected to a first spacer, then a second segment with 7 linked nucleosides connected on one end to the first spacer and connected on another end to a second spacer, then a third segment with 6 linked nucleosides connected on one end to the second spacer and connected on another end to a third spacer, then a fourth segment with 6 linked nucleosides connected to the third spacer.

[00212] In various embodiments, the one or more spacers are positioned in the oligonucleotide to replace one or more adenosine or thymine nucleosides (as opposed to guanine or cytosine

nucleosides). For example, the one or more spacers can replace one, two, three, four, five, six, seven, eight, or nine adenosine or thymine nucleosides in the oligonucleotide. In various embodiments, the one or more spacers are positioned in the oligonucleotide to replace one or more guanine or cytosine nucleosides (as opposed to adenosine or thymine nucleosides). For example, the one or more spacers can replace one, two, three, four, five, six, seven, eight, or nine guanine or cytosine nucleosides in the oligonucleotide. In various embodiments, the spacers are positioned in the oligonucleotide to replace an equal number of adenosine/thymine nucleosides and guanine/cytosine nucleosides. For example, a first spacer in the oligonucleotide may replace an adenosine/thymine nucleoside and a second spacer in the oligonucleotide may replace a guanine/cytosine nucleoside.

[00213] In various embodiments, the one or more spacers are positioned in the oligonucleotide to control the sequence content in the oligonucleotide. For example, the one or more spacers are positioned such that at least one of the spacers is located adjacent to a guanine group. In various embodiments, an oligonucleotide with spacers can include one spacer adjacent to a guanine group, two spacers adjacent to guanine groups, three spacers adjacent to guanine groups, four spacers adjacent to guanine groups, or five spacers adjacent to guanine groups. In one embodiment, if counting from the 5' end of the oligonucleotide, a spacer immediately precedes a guanine group in the sequence. Thus, in various embodiments, an oligonucleotide with spacers can include one spacer that immediately precedes a guanine group, two spacers that each immediately precede a guanine group, three spacers that each immediately precede a guanine group, four spacers that each immediately precede a guanine group, or five spacers that each immediately precede a guanine group. In one embodiment, if counting from the 5' end of the oligonucleotide, a guanine group is immediately succeeded by a spacer. Thus, in various embodiments, an oligonucleotide with spacers can include one spacer that immediately succeeds a guanine group, two spacers that each immediately succeed a guanine group, three spacers that each immediately succeed a guanine group, four spacers that each immediately succeed a guanine group, or five spacers that each immediately succeed a guanine group. In various embodiments, the spacers in the oligonucleotide can be positioned to maximize the number of spacers adjacent to guanine groups.

[00214] In various embodiments, the one or more spacers are positioned in the oligonucleotide to replace one or more adenosine or thymine nucleosides such that the one or more spacers are located adjacent guanine groups. For example, two spacers can replace adenosine or thymine nucleosides in the oligonucleotide, each of the two spacers being located adjacent to a guanine group.

[00215] In various embodiments, the oligonucleotide with one or more spacers has a particular GC content. As used herein, GC content (or guanine-cytosine content) is the percentage of nitrogenous bases in the oligonucleotide that are either guanine (G) or cytosine (C). In various embodiments, the oligonucleotide with one or more spacers has at least 10% GC content, at least 20% GC content, at least 25% GC content, at least 30% GC content, at least 35% GC content, at least 40% GC content, at least 45% GC content, at least 50% GC content, at least 55% GC content, at least 60% GC content, at least 65% GC content, at least 75% GC content, at least 80% GC content, at least 85% GC content, at least 90% GC content, or at least 95% GC content. In particular embodiments, the oligonucleotide with one or more spacers has at least 30% GC content. In particular embodiments, the oligonucleotide with one or more spacers has at least 40% GC content. In various embodiments, the one or more spacers are positioned in the oligonucleotide to maximize GC content. For example, instead of selecting a guanine or cytosine for replacement by a spacer in the oligonucleotide, a thymine or adenine can be selected for replacement by a spacer.

[00216] In various embodiments, an oligonucleotide with spacers is designed such that 1) each segment of the oligonucleotide has at most 7 linked nucleosides and 2) at least two, three, or four spacers are positioned adjacent to a guanine group. In some embodiments, an oligonucleotide with spacers is designed such that 1) each segment of the oligonucleotide has at most 7 linked nucleosides and 2) each of two spacers precede a guanine group.

[00217] In various embodiments, the inclusion of one or more spacers in the oligonucleotide does not decrease the effectiveness of the oligonucleotide with the spacers in reducing the frequency of target mRNA or pre-mRNA transcripts in comparison to the effect of a corresponding parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide. Example mRNA or pre-mRNa transcripts include gene products of any of PPM1A, ATXN2, SOD1, or MAPT. In various embodiments, the inclusion of one or more spacers in the oligonucleotide increases the effectiveness of the oligonucleotide with the spacers in reducing the frequency of target mRNA or pre-mRNA transcripts in comparison to the effect of a corresponding parent oligonucleotide, oligonucleotide variant, or gapmer oligonucleotide.

[00218] Tables 4A, 4B, and 4C document example AONs with one or more spacers and their relation to corresponding parent oligonucleotides, corresponding oligonucleotide variants, and/or corresponding gapmer oligonucleotides. Each oligonucleotide is assigned a sequence name. As used hereafter, the nomenclature of the sequence name is expressed as "X_spA" (for an AON with one spacer), "X_spA_spB" (for an AON with two spacers), or "X_spA_spB_spC" (for an AON with three spacers). Here, "X" refers to the length of the AON, "A" refers to the position in

the AON where the first spacer is located, "B" refers to the position in the AON where the second spacer is located, and if present, "C" refers to the position in the AON where the third spacer is located.

[00219] Example AONs with one spacer are documented below in Table 4A.

Table 4A: Identification of AONs with one spacer. Here, each AON has 2 segments.

Sequence name	**Relation to gapmer oligonucleotide or gapmer oligonucleotide variant**	**Sequence* (where *X* indicates a nucleoside of the gapmer oligonucleotide or oligonucleotide gapmer variant and S_y indicates presence of a Spacer where *y* denotes the position)** (5' → 3')
Gapmer oligonucleotide (e.g., 5-10-5 gapmer)	N/A	XXXXXXXXXXXXXXXXXXXX (20mer)
Gapmer oligonucleotide (20mer) with Spacer at position 1 (AON 20_sp1)	Nucleoside at position 1 of 20mer is substituted with a spacer	$\mathbf{S_1}$XXXXXXXXXXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 2 (AON 20_sp2)	Nucleoside at position 2 of 20mer is substituted with a spacer	X$\mathbf{S_2}$XXXXXXXXXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 3 (AON 20_sp3)	Nucleoside at position 3 of 20mer is substituted with a spacer	XX$\mathbf{S_3}$XXXXXXXXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 4 (AON 20_sp4)	Nucleoside at position 4 of 20mer is substituted with a spacer	XXX$\mathbf{S_4}$XXXXXXXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 5 (AON 20_sp5)	Nucleoside at position 5 of 20mer is substituted with a spacer	XXXX$\mathbf{S_5}$XXXXXXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 6 (AON 20_sp7)	Nucleoside at position 6 of 20mer is substituted with a spacer	XXXXX$\mathbf{S_6}$XXXXXXXXXXXXX
Gapmer oligonucleotide	Nucleoside at position 7 of	XXXXXX$\mathbf{S_7}$XXXXXXXXXXXX

(20mer) with Spacer at position 7 (AON 20_sp7)	20mer is substituted with a spacer	
Gapmer oligonucleotide (20mer) with Spacer at position 8 (AON 20_sp8)	Nucleoside at position 8 of 20mer is substituted with a spacer	XXXXXXX$\mathbf{S}_8$XXXXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 9 (AON 20_sp9)	Nucleoside at position 9 of 20mer is substituted with a spacer	XXXXXXXX$\mathbf{S}_9$XXXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 10 (AON 20_sp10)	Nucleoside at position 10 of 20mer is substituted with a spacer	XXXXXXXXX$\mathbf{S}_{10}$XXXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 11 (AON 20_sp11)	Nucleoside at position 11 of 20mer is substituted with a spacer	XXXXXXXXXX$\mathbf{S}_{11}$XXXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 12 (AON 20_sp12)	Nucleoside at position 12 of 20mer is substituted with a spacer	XXXXXXXXXXX$\mathbf{S}_{12}$XXXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 13 (AON 20_sp13)	Nucleoside at position 13 of 20mer is substituted with a spacer	XXXXXXXXXXXX$\mathbf{S}_{13}$XXXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 14 (AON 20_sp14)	Nucleoside at position 14 of 20mer is substituted with a spacer	XXXXXXXXXXXXX$\mathbf{S}_{14}$XXXXX
Gapmer oligonucleotide (20mer) with Spacer at position 15 (AON 20_sp15)	Nucleoside at position 15 of 20mer is substituted with a spacer	XXXXXXXXXXXXXX$\mathbf{S}_{15}$XXXX
Gapmer oligonucleotide (20mer) with Spacer at position 16 (AON 20_sp16)	Nucleoside at position 16 of 20mer is substituted with a spacer	XXXXXXXXXXXXXXX$\mathbf{S}_{16}$XXX
Gapmer oligonucleotide	Nucleoside at position 17 of	XXXXXXXXXXXXXXXX$\mathbf{S}_{17}$XX

(20mer) with Spacer at position 17 (AON 20_sp17)	20mer is substituted with a spacer	
Gapmer oligonucleotide (20mer) with Spacer at position 18 (AON 20_sp18)	Nucleoside at position 18 of 20mer is substituted with a spacer	XXXXXXXXXXXXXXXXX$\mathbf{S}_{18}$XX
Gapmer oligonucleotide (20mer) with Spacer at position 18 (AON 20_sp19)	Nucleoside at position 19 of 20mer is substituted with a spacer	XXXXXXXXXXXXXXXXXX$\mathbf{S}_{19}$X
Gapmer oligonucleotide (20mer) with Spacer at position 20 (AON 20_sp18)	Nucleoside at position 20 of 20mer is substituted with a spacer	XXXXXXXXXXXXXXXXXX$\mathbf{S}_{20}$
Gapmer oligonucleotide variant (23mer) (e.g., 6-11-6 gapmer)	N/A	XXXXXXXXXXXXXXXXXXXXXXX (23mer)
Gapmer oligonucleotide (23mer) with Spacer at position 12 (AON 23_sp12)	Nucleoside at position 12 of 23mer is substituted with a spacer	XXXXXXXXXXX$\mathbf{S}_{12}$XXXXXXXXXXX
Gapmer oligonucleotide variant (21mer)	N/A	XXXXXXXXXXXXXXXXXXXXX (21mer)
Gapmer oligonucleotide (21mer) with Spacer at position 11 (AON 21_sp11)	Nucleoside at position 11 of 21mer is substituted with a spacer	XXXXXXXXXX$\mathbf{S}_{11}$XXXXXXXXXX
Gapmer oligonucleotide variant (19mer)	N/A	XXXXXXXXXXXXXXXXXXX (19mer)
Gapmer oligonucleotide (19mer) with Spacer at position 10 (AON 19_sp10)	Nucleoside at position 10 of 19mer is substituted with a spacer	XXXXXXXXX$\mathbf{S}_{10}$XXXXXXXXX
Gapmer oligonucleotide variant (18mer) (e.g., 4-10-4 gapmer)	N/A	XXXXXXXXXXXXXXXXXX (18mer)
Gapmer oligonucleotide	Nucleoside at position 9 of 18mer is	XXXXXXXX$\mathbf{S}_{9}$XXXXXXXXX

(18mer) with Spacer at position 9 (AON 18_sp9)	substituted with a spacer	
Gapmer oligonucleotide (18mer) with Spacer at position 10 (AON 18_sp10)	Nucleoside at position 10 of 18mer is substituted with a spacer	XXXXXXXXX$\mathbf{S_{10}}$XXXXXXXX
Gapmer oligonucleotide (18mer) with Spacer at position 11 (AON 18_sp11)	Nucleoside at position 11 of 18mer is substituted with a spacer	XXXXXXXXXX$\mathbf{S_{11}}$XXXXXXX

* At least one nucleoside linkage of the nucleobase sequence is selected from a phosphorothioate linkage, an alkyl phosphate linkage, a phosphorodithioate linkage, a phosphotriester linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

[00220] In various embodiments, oligonucleotides disclosed herein include two spacers. In various embodiments, the inclusion of two spacers divide up the oligonucleotide into three separate segments, where at least one of the segments is at most 7 linked nucleosides in length.

[00221] In particular embodiments, a first spacer is located between positions 5 and 11 of the oligonucleotide. In various embodiments, the first spacer is located between positions 7 and 11 of the oligonucleotide. In various embodiments, the second spacer is located between positions 15 and 19 of the oligonucleotide. In various embodiments, the first spacer and the second spacer are separated by at least 5 nucleobases, at least 6 nucleobases, or at least 7 nucleobases in the oligonucleotide.

[00222] In various embodiments, the first spacer is located between positions 5 and 11 of the oligonucleotide, and the second spacer is located between positions 15 and 19 of the oligonucleotide. In various embodiments, the first spacer is located at position 8 of the oligonucleotide, and wherein the second spacer is located at position 16 of the oligonucleotide. In various embodiments, the first spacer is located at position 5 of the oligonucleotide, and wherein the second spacer is located at position 17 of the oligonucleotide. In various embodiments, the first spacer is located at position 7 of the oligonucleotide, and wherein the second spacer is

located at position 14 of the oligonucleotide. In various embodiments, the first spacer is located at position 7 of the oligonucleotide, and wherein the second spacer is located at position 15 of the oligonucleotide. In various embodiments, the first spacer is located at position 11 of the oligonucleotide, and wherein the second spacer is located at position 19 of the oligonucleotide.

Example AONs with two spacers are documented below in Table 4B.

Table 4B: Identification of AONs with two spacers. Here, each AON has 3 segments.

Sequence name	**Relation to gapmer oligonucleotide**	**Sequence* (where *X* indicates a nucleoside of the gapmer oligonucleotide and S_y indicates presence of a Spacer where *y* denotes the position)** (5' → 3')
20mer Gapmer oligonucleotide (e.g., 5-10-5 gapmer)	N/A	XXXXXXXXXXXXXXXXXXXX
Gapmer oligonucleotide with Spacers at positions 5 and 15 (AON 20_sp5sp15)	Nucleosides at positions 5 and 15 are each substituted with a spacer	XXXX$\mathbf{S_5}$XXXXXXXXX$\mathbf{S_{15}}$XXXXX
Gapmer oligonucleotide with Spacers at positions 5 and 16 (AON 20_sp5sp16)	Nucleosides at positions 5 and 16 are each substituted with a spacer	XXXX$\mathbf{S_5}$XXXXXXXXXX$\mathbf{S_{16}}$XXXX
Gapmer oligonucleotide with Spacers at positions 5 and 17 (AON 20_sp5sp17)	Nucleosides at positions 5 and 17 are each substituted with a spacer	XXXX$\mathbf{S_5}$XXXXXXXXXXX$\mathbf{S_{17}}$XXX
Gapmer oligonucleotide with Spacers at positions 5 and 18 (AON 20_sp5sp18)	Nucleosides at positions 5 and 18 are each substituted with a spacer	XXXX$\mathbf{S_5}$XXXXXXXXXXXX$\mathbf{S_{18}}$XX
Gapmer oligonucleotide with Spacers at positions 5 and 19 (AON 20_sp5sp19)	Nucleosides at positions 5 and 19 are each substituted with a spacer	XXXX$\mathbf{S_5}$XXXXXXXXXXXXX$\mathbf{S_{19}}$X
Gapmer oligonucleotide with Spacers at positions 6 and 15 (AON 20_sp6sp15)	Nucleosides at positions 6 and 15 are each substituted with a spacer	XXXXX$\mathbf{S_6}$XXXXXXXX$\mathbf{S_{15}}$XXXXX

Gapmer oligonucleotide with Spacers at positions 6 and 16 (AON 20_sp6sp16)	Nucleosides at positions 6 and 16 are each substituted with a spacer	XXXXX$\mathbf{S_6}$XXXXXXXXX$\mathbf{S_{16}}$XXXX
Gapmer oligonucleotide with Spacers at positions 6 and 17 (AON 20_sp6sp17)	Nucleosides at positions 6 and 17 are each substituted with a spacer	XXXXX$\mathbf{S_6}$XXXXXXXXXX$\mathbf{S_{17}}$XXX
Gapmer oligonucleotide with Spacers at positions 6 and 18 (AON 20_sp6sp18)	Nucleosides at positions 6 and 18 are each substituted with a spacer	XXXXX$\mathbf{S_6}$XXXXXXXXXXX$\mathbf{S_{18}}$XX
Gapmer oligonucleotide with Spacers at positions 6 and 19 (AON 20_sp6sp19)	Nucleosides at positions 6 and 19 are each substituted with a spacer	XXXXX$\mathbf{S_6}$XXXXXXXXXXXX$\mathbf{S_{19}}$X
Gapmer oligonucleotide with Spacers at positions 7 and 14 (AON 20_sp7sp14)	Nucleosides at positions 7 and 14 are each substituted with a spacer	XXXXXX$\mathbf{S_7}$XXXXXX$\mathbf{S_{14}}$XXXXXX
Gapmer oligonucleotide with Spacers at positions 7 and 15 (AON 20_sp7sp15)	Nucleosides at positions 7 and 15 are each substituted with a spacer	XXXXXX$\mathbf{S_7}$XXXXXXX$\mathbf{S_{15}}$XXXXX
Gapmer oligonucleotide with Spacers at positions 7 and 16 (AON 20_sp7sp16)	Nucleosides at positions 7 and 16 are each substituted with a spacer	XXXXXX$\mathbf{S_7}$XXXXXXXX$\mathbf{S_{16}}$XXXX
Gapmer oligonucleotide with Spacers at positions 7 and 17 (AON 20_sp7sp17)	Nucleosides at positions 7 and 17 are each substituted with a spacer	XXXXXX$\mathbf{S_7}$XXXXXXXXX$\mathbf{S_{17}}$XXX
Gapmer oligonucleotide with Spacers at positions 7 and 18 (AON 20_sp7sp18)	Nucleosides at positions 7 and 18 are each substituted with a spacer	XXXXXX$\mathbf{S_7}$XXXXXXXXXX$\mathbf{S_{18}}$XX
Gapmer oligonucleotide with Spacers at positions 7 and 19 (AON 20_sp7sp19)	Nucleosides at positions 7 and 19 are each substituted with a spacer	XXXXXX$\mathbf{S_7}$XXXXXXXXXXX$\mathbf{S_{19}}$X

Gapmer oligonucleotide with Spacers at positions 8 and 15 (AON 20_sp8sp15)	Nucleosides at positions 8 and 15 are each substituted with a spacer	XXXXXXX$\mathbf{S_8}$XXXXXX$\mathbf{S_{15}}$XXXXX
Gapmer oligonucleotide with Spacers at positions 8 and 16 (AON 20_sp8sp16)	Nucleosides at positions 8 and 16 are each substituted with a spacer	XXXXXXX$\mathbf{S_8}$XXXXXXX$\mathbf{S_{16}}$XXXX
Gapmer oligonucleotide with Spacers at positions 8 and 17 (AON 20_sp8sp17)	Nucleosides at positions 8 and 17 are each substituted with a spacer	XXXXXXX$\mathbf{S_8}$XXXXXXXX$\mathbf{S_{17}}$XXX
Gapmer oligonucleotide with Spacers at positions 8 and 18 (AON 20_sp8sp18)	Nucleosides at positions 8 and 18 are each substituted with a spacer	XXXXXXX$\mathbf{S_8}$XXXXXXXXX$\mathbf{S_{18}}$XX
Gapmer oligonucleotide with Spacers at positions 8 and 19 (AON 20_sp8sp19)	Nucleosides at positions 8 and 19 are each substituted with a spacer	XXXXXXX$\mathbf{S_8}$XXXXXXXXXX$\mathbf{S_{19}}$X
Gapmer oligonucleotide with Spacers at positions 9 and 15 (AON 20_sp9sp15)	Nucleosides at positions 9 and 15 are each substituted with a spacer	XXXXXXXX$\mathbf{S_9}$XXXXX$\mathbf{S_{15}}$XXXXX
Gapmer oligonucleotide with Spacers at positions 9 and 16 (AON 20_sp9sp16)	Nucleosides at positions 9 and 16 are each substituted with a spacer	XXXXXXXX$\mathbf{S_9}$XXXXXX$\mathbf{S_{16}}$XXXX
Gapmer oligonucleotide with Spacers at positions 9 and 17 (AON 20_sp9sp17)	Nucleosides at positions 9 and 17 are each substituted with a spacer	XXXXXXXX$\mathbf{S_9}$XXXXXXX$\mathbf{S_{17}}$XXX
Gapmer oligonucleotide with Spacers at positions 9 and 18 (AON 20_sp9sp18)	Nucleosides at positions 9 and 18 are each substituted with a spacer	XXXXXXXX$\mathbf{S_9}$XXXXXXXX$\mathbf{S_{18}}$XX
Gapmer oligonucleotide with Spacers at positions 9 and 19 (AON 20_sp9sp19)	Nucleosides at positions 9 and 19 are each substituted with a spacer	XXXXXXXX$\mathbf{S_9}$XXXXXXXXX$\mathbf{S_{19}}$X

* At least one nucleoside linkage of the nucleobase sequence is selected from a phosphorothioate linkage, an alkyl phosphate linkage, a phosphorodithioate linkage, a phosphotriester linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

[00223] In various embodiments, AONs with one or more spacers are reduced in length or increased in length in comparison to the AONs described above in Tables 4A and 4B. For example, such AONs may be oligonucleotide variants with one or more spacers. In various embodiments, the oligonucleotide variants with one or more spacers are 23mers, 21mers, 19mers, or 18mers. In various embodiments, oligonucleotide variants include two spacers such that the oligonucleotide variant includes three segments that are divided up by the two spacers. In various embodiments, at least one of the three segments has at most 7 linked nucleosides. In various embodiments, each of the three segments has at most 7 linked nueclosides. Example oligonucleotide variants with one or more spacers are shown below in Table 4C.

Table 4C: AON variants with two spacers. Here, each AON variant has 3 segments.

Sequence name	**Relation to oligonucleotide variant**	**Sequence* (where *X* indicates a nucleoside of the oligonucleotide variant and S_y indicates presence of a Spacer where *y* denotes the position)** (5' → 3')

Gapmer oligonucleotide variant (18mer) with Spacers at positions 8 and 15 (AON variant 18_sp8sp15)	Nucleosides at positions 8 and 15 are substituted with spacers	XXXXXXX$\mathbf{S_8}$XXXXXX$\mathbf{S_{15}}$XXX

* At least one nucleoside linkage of the nucleobase sequence is selected from a phosphorothioate linkage, an alkyl phosphate linkage, a phosphorodithioate linkage, a phosphotriester linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose)

linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

[00224] In various embodiments, antisense oligonucleotides disclosed herein (e.g.,PPM1A AONs, ATXN2 AONs, SOD1 AONs, or MAPT AONs) comprise one or more locked nucleic acids (LNAs). In particular embodiments, an antisense oligonucleotide includes one LNA. In particular embodiments, an antisense oligonucleotide includes two LNAs. In particular embodiments, an antisense oligonucleotide includes three LNAs. Generally, a LNA refers to nucleic acid monomers having a bridge (*e.g.*, methylene, ethylene, aminooxy, or oxyimino bridge) connecting two carbon atoms between the 4' and 2' position of the nucleoside sugar unit, thereby forming a bicyclic sugar.

[00225] In some embodiments, antisense oligonucleotides disclosed herein (e.g.,PPM1A AONs, ATXN2 AONs, SOD1 AONs, or MAPT AONs) comprise one or more spacers as well as one or more locked nucleic acids (LNAs). In some embodiments, antisense oligonucleotides disclosed herein (e.g.,PPM1A AONs, ATXN2 AONs, SOD1 AONs, or MAPT AONs) comprise two spacers and two LNAs. In some embodiments, an antisense oligonucleotide disclosed herein comprises two spacers and three LNAs.

[00226] In various embodiments, a spacer and a LNA are located adjacent to one another in an antisense oligonucleotide. For example, a spacer can be located at position M of the antisense oligonucleotide. Additionally, a LNA can be located at a position $M + 1$ or position $M - 1$ of the antisense oligonucleotide. In various embodiments, a first spacer is located adjacent to a first LNA and a second spacer is located adjacent to a second LNA in an antisense oligonucleotide. For example, a first spacer can be located at position M of the antisense oligonucleotide and a second spacer can be located at position N of the antisense oligonucleotide. A first LNA can be located at a position $M + 1$ or position $M - 1$ of the antisense oligonucleotide and a second LNA can be located at a position $N + 1$ or position $N - 1$ of the antisense oligonucleotide. In other embodiments, one or more spacers and one or more LNAs are not located adjacent to one another in an antisense oligonucleotide. For example, there may be one, two, three, four, five, six, seven, eight, nine, or ten oligonucleotide units between a spacer and a LNA in an antisense oligonucleotide.

Chemical Modifications to AONs

[00227] As described herein, AONs, such as AONs with a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, may include one or more chemical modifications to one or more nucleosides and/or to one or more internucleoside linkages. A nucleoside is a base-sugar combination. The nucleobase (also known as base) portion of the nucleoside is normally a heterocyclic base moiety. Nucleotides are nucleosides that further include a phosphate group covalently linked to the sugar portion of the nucleoside. For those nucleosides that include a pentofuranosyl sugar, the phosphate group can be linked to the 2', 3' or 5' hydroxyl moiety of the sugar. Oligonucleotides are formed through the covalent linkage of adjacent nucleosides to one another, to form a linear polymeric oligonucleotide. Within the oligonucleotide structure, the phosphate groups are commonly referred to as forming the internucleoside linkages of the oligonucleotide.

[00228] Modifications to AONs encompass substitutions or changes to internucleoside linkages and/or nucleosides (*e.g.*, sugar moieties or nucleobases of nucleosides). Modified AONs can be preferred over native forms because of desirable properties such as, for example, enhanced cellular uptake, enhanced affinity for nucleic acid target, increased stability in the presence of nucleases, or increased inhibitory activity. Chemically modified nucleosides, nucleobases, and internucleoside linkages are described in Agrawal and Gait, *History and Development of Nucleotide Analogues in Nucleic Acids Drugs*, in Drug Discovery Series No. 68, Advances in Nucleic Acid Therapeutics, 1-21 (Agrawal and Gait eds., 2019), the contents of which are incorporated by reference herein.

Modified Internucleoside Linkages

[00229] In various embodiments, AONs, such as AONs comprising a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), include one or more modified internucleoside linkages. The naturally occurring internucleoside linkage of RNA and DNA is a 3' to 5' phosphodiester linkage. AONs having one or more modified, *i.e.*, non-naturally occurring, internucleoside linkages can be selected over antisense compounds having naturally occurring internucleoside linkages because of desirable properties such as, for example, enhanced cellular uptake, enhanced affinity for target nucleic acids, and increased stability in the presence of nucleases.

[00230] Modified internucleoside linkages include internucleoside linkages that retain a phosphorus atom as well as internucleoside linkages that do not have a phosphorus atom. Representative phosphorus containing internucleoside linkages include, but are not limited to, phosphodiesters, phosphotriesters, methylphosphonates, phosphoramidate, and phosphorothioates. Methods of preparation of phosphorous-containing and non-phosphorous-containing linkages are well known. Examples of modified internucleoside linkages include any one of a phosphorothioate linkage, an alkyl phosphate linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a phosphorodithioate linkage, a phosphotriester linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage.

[00231] In various embodiments, AONs include one or more modified internucleoside linkages that link the oligonucleotide units. In various embodiments, AONs include one, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, or nineteen modified internucleoside linkages that link the oligonucleotide units.

[00232] In various embodiments, each modified internucleoside linkage of the AON can be designed independent of other modified internucleoside linkages of the AON. In other words, the modified internucleoside linkages of an AON need not all be the same type of modified internucleoside linkage. In various embodiments, the modified internucleoside linkages are interspersed throughout the antisense compound.

[00233] In various embodiments, AONs include at least one phosphorothioate linkage. In various embodiments, AONs include at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, at least nine, at least ten, at least eleven, at least twelve, at least thirteen, at least fourteen, at least fifteen, at least sixteen, at least seventeen, at least eighteen, or at least nineteen phosphorothioate linkages. In particular embodiments, AONs include thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, twenty, twenty one, or twenty two phosphorothioate linkages. In particular embodiments, AONs include 17 phosphorothioate linkages. In particular embodiments, AONs include 19 phosphorothioate linkages. In particular embodiments, AONs include 22 phosphorothioate linkages. In particular embodiments, all internucleoside linkages of the AON are phosphorothioate linkages.

[00234] In various embodiments, an AON includes a mixture of modified internucleoside linkages and naturally occurring phosphodiester linkages. For example, an AON includes at least one phosphodiester linkage and at least one phosphorothioate linkage. In various embodiments, an AON includes between 6 and 10, between 6 and 9, between 6 and 8, between 7 and 10, between 7 and 9, or 6, 7, or 8 phosphorothioate linkages. In some embodiments, an AON includes 6, 7, 8, 9, or 10 phosphorothioate linkages. In some embodiments, an AON includes between 6 and 10, between 6 and 9, between 6 and 8, between 7 and 10, between 7 and 9, or 6, 7, or 8 phosphodiester linkages. In some embodiments, an AON includes 6, 7, 8, 9, or 10 phosphodiester linkages.

[00235] In particular embodiments, an AON includes 10 phosphorothioate linkages and 9 phosphodiester linkages. In particular embodiments, an AON includes 6 phosphorothioate linkages and 7 phosphodiester linkages. In particular embodiments, an AON includes 6 phosphorothioate linkages and 9 phosphodiester linkages. In particular embodiments, an AON includes 8 phosphorothioate linkages and 9 phosphodiester linkages. In particular embodiments, an AON includes 8 phosphorothioate linkages and 7 phosphodiester linkages. In particular embodiments, an AON includes 12 phosphorothioate linkages and 7 phosphodiester linkages. In particular embodiments, an AON includes 15 phosphorothioate linkages and 4 phosphodiester linkages. In particular embodiments, an AON includes 15 phosphorothioate linkages and 2 phosphodiester linkages. In particular embodiments, an AON includes 17 phosphorothioate linkages and 2 phosphodiester linkages.

[00236] In some embodiments, AONs include internucleoside linkages that are designed according to the gapmer design of the AON. In some embodiments, the 5' wing region includes at least one modified internucleoside linkage (*e.g.*, modified from the naturally occurring internucleoside linkage of a 3' to 5' phosphodiester linkage). In some embodiments, the 5' wing region includes at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, at least nine, or at least ten modified internucleoside linkages. In some embodiments, the 3' wing region includes at least one modified internucleoside linkage. In some embodiments, the 3' wing region includes at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, at least nine, or at least ten modified internucleoside linkages. In some embodiments, the central region includes at least one modified internucleoside linkage. In some embodiments, the central region includes at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, at least nine, or at least ten modified internucleoside linkages.

[00237] In particular embodiments all internucleoside linkages of the 5' wing region are modified internucleoside linkages, such as phosphorothioate linkages. In particular embodiments all internucleoside linkages of the 3' wing region are modified internucleoside linkages, such as phosphorothioate linkages. In particular embodiments all internucleoside linkages of the central region are modified internucleoside linkages, such as phosphorothioate linkages. In particular embodiments all internucleoside linkages of each of the 5' wing region, 3' wing region, and the central region are modified internucleoside linkages, such as phosphorothioate linkages.

[00238] In various embodiments, two internucleoside linkages of the 5' wing region are phosphorothioate linkages. In various embodiments, two internucleoside linkages of the 5' wing region are phosphodiester linkages. In various embodiments, two internucleoside linkages of the 5' wing region are phosphorothioate linkages and another two internucleoside linkages of the 5' wing region are phosphodiester linkages. In various embodiments, two internucleoside linkages of the 3' wing region are phosphorothioate linkages. In various embodiments, two internucleoside linkages of the 3' wing region are phosphodiester linkages. In various embodiments, two internucleoside linkages of the 3' wing region are phosphorothioate linkages and another two internucleoside linkages of the 3' wing region are phosphodiester linkages.

[00239] In various embodiments, four internucleoside linkages of the 5' wing region are phosphorothioate linkages. In various embodiments, four internucleoside linkages of the 5' wing region are phosphorothioate linkages and two internucleoside linkages of the 3' wing region are phosphorothioate linkages. In various embodiments, one internucleoside linkage of the 5' wing region is a phosphorothioate linkage. In various embodiments, one internucleoside linkage of the 3' wing region is a phosphorothioate linkage. In various embodiments, one internucleoside linkage of the 5' wing region is a phosphorothioate linkage and one internucleoside linkage of the 3' wing region is a phosphorothioate linkage.

[00240] In some embodiments, the one or more modified internucleoside linkages in the 5' wing region, 3' wing region, or the central region are phosphorothioate internucleoside linkages. In some embodiments, the phosphorothioate linkages are stereochemically pure phosphorothioate linkages. In some embodiments the phosphorothioate linkages are *S*p phosphorothioate linkages. In other embodiments, the phosphorothioate linkages are *R*p phosphorothioate linkages.

[00241] In some embodiments, the one or more modified internucleoside linkages in the 5' wing region, 3' wing region, or the central region can be any of an alkyl phosphate linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a phosphorodithioate linkage, a phosphotriester linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a

phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage. In various embodiments, each modified internucleoside linkage of the 5' wing region, 3' wing region, or the central region can be designed independent of other modified internucleoside linkages. In other words, the modified internucleoside linkages of 5' wing region, 3' wing region, and the central region need not all be the same type of modified internucleoside linkage. In various embodiments, modified internucleoside linkages are interspersed throughout the antisense compound.

[00242] In various embodiments, one or more internucleoside linkages of the 5' wing region, the 3' wing region, or the central region are naturally occurring linkages (*e.g.*, phosphodiester bonds). In various embodiments, all internucleoside linkages of the central region are unmodified internucleoside linkages (*e.g.*, phosphodiester linkages).

[00243] In various embodiments, the internucleoside linkages of the one region (*e.g.*, 5' wing region, 3' wing region, or the central region) may differ from the internucleoside linkages of another region. In particular embodiments, the 5' wing region includes at least one modified internucleoside linkage, the 3' wing region includes at least one modified internucleoside linkage, and all internucleoside linkages of the central region are unmodified internucleoside linkages (*e.g.*, phosphodiester linkages). In some embodiments, the central region of the oligonucleotide comprises phosphodiester bonds and the 5' wing region and 3' wing region each comprises one or more phosphorothioate linkages. In particular embodiments, all internucleoside linkages of the 5' wing region are modified internucleoside linkages, all internucleoside linkages of the 3' wing region are modified internucleoside linkages, and all internucleoside linkages of the central region are unmodified internucleoside linkages (*e.g.*, phosphodiester linkages).

[00244] In particular embodiments, the gapmer AON is a 5-10-5 gapmer and the internucleoside linkages of the gapmer AON are denoted as: sssssssssssssssss (where "s" refers to a phosphorothioate bond). In particular embodiments, the gapmer AON is a 5-10-5 gapmer and the internucleoside linkages of the gapmer AON are denoted as any of: sssssssssssssssss, sossssssssssssssoss, sssssoooooooooosssss, sosossssssssssosos, soooossssssssssoooos, soooossssssssssooss, ooooossssssssssooooo, ooooooooooooooosssss, soossssssssssssoos, soossssssssssssssss, sssssssssssssssoos, and sssssoooooooooooooo (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In particular embodiments, the

gapmer AON is a 3-8-3 gapmer and the internucleoside linkages of the gapmer AON are denoted as: sssssssssssss (where "s" refers to a phosphorothioate bond).

[00245] In particular embodiments, the gapmer AON is a 3-8-3 gapmer and the internucleoside linkages of the gapmer AON are denoted as any of: sssooooooosss, ooosssssssooo, sssssssssooo, sossssssssos, sossssssssss, sssssssssssos, and ooossssssssss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In particular embodiments, the gapmer AON is a 3-10-3 gapmer and the internucleoside linkages of the gapmer AON are denoted as: sssssssssssssss (where "s" refers to a phosphorothioate bond).

[00246] In particular embodiments, the gapmer AON is a 3-10-3 gapmer and the internucleoside linkages of the gapmer AON are denoted as any of: sssooooooooosss, ooosssssssssooo, sssssssssssooo, sossssssssssos, sossssssssssss, sssssssssssssos, and ooossssssssssss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In particular embodiments, the gapmer AON is a 4-10-4 gapmer and the internucleoside linkages of the gapmer AON are denoted as: ssssssssssssssss (where "s" refers to a phosphorothioate bond).

[00247] In particular embodiments, the gapmer AON is a 4-10-4 gapmer and the internucleoside linkages of the gapmer AON are denoted as any of: ssssooooooooosssss, oooosssssssssoooo, sssssssssssssoooo, soossssssssssoos, soossssssssssss, sssssssssssssoos, and oooossssssssssss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In particular embodiments, the gapmer AON is a 4-8-4 gapmer and the internucleoside linkages of the gapmer AON are denoted as: ssssssssssssss (where "s" refers to a phosphorothioate bond).

[00248] In particular embodiments, the gapmer AON is a 4-8-4 gapmer and the internucleoside linkages of the gapmer AON are denoted as any of: ssssooooooosssss, oooosssssssoooo, sssssssssssoooo, soossssssssssoos, soossssssssssss, sssssssssssssoos, and oooossssssssssss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond).

[00249] In particular embodiments, the gapmer AON is a 5-8-5 gapmer and the internucleoside linkages of the gapmer AON are denoted as any of: sssssssssssssssss or sossssssssssssoss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond).

Modified Sugar Moieties

[00250] AONs, such as AONs with a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), can contain one or more nucleosides wherein the sugar group has been modified. Such sugar

modified nucleosides may impart enhanced nuclease stability, increased binding affinity, or some other beneficial biological property to the antisense compounds.

[00251] In various embodiments, nucleosides with a modified sugar moiety include a ribose in which the 2′-OH group may be replaced by any one selected from the group consisting of OR, R, R′OR, SH, SR, NH_2, NR_2, N_3, CN, F, Cl, Br, and I (wherein R is an alkyl or aryl and R′ is an alkylene), a 2'-O-methyl (2'-OMe) nucleoside, 2'-O-(2-methoxyethyl) (2'-MOE) nucleoside, peptide nucleic acid (PNA), bicyclic nucleic acid (BNA), 2'-deoxy-2'-fluoro nucleoside, 2'-fluoro-β-D-arabinonucleoside, locked nucleic acid (LNA), constrained ethyl 2'-4'-bridged nucleic acid (cEt), *S*-cEt, morpholino oligomer, tcDNA, 2′-O, 4′-C-ethylene linked nucleic acid (ENA), hexitol nucleic acids (HNA), and tricyclic analog (*e.g.*, tcDNA).

[00252] In certain embodiments, nucleosides comprise chemically modified ribofuranose ring moieties. Examples of chemically modified ribofuranose rings include without limitation, addition of substituent groups (including 5' and 2' substituent groups, bridging of non-geminal ring atoms to form bicyclic nucleic acids (BNA), replacement of the ribosyl ring oxygen atom with S, N(R), or $C(R_1)(R_2)$ (R, R_1 and R_2 are each independently H, C_1-C_{12} alkyl or a protecting group) and combinations thereof. Examples of chemically modified sugars include 2'-F-5'-methyl substituted nucleoside (*see* PCT International Application WO 2008/101157 Published on Aug. 21, 2008 for other disclosed 5',2'-bis substituted nucleosides) or replacement of the ribosyl ring oxygen atom with S or CF_2 with further substitution at the 2'-position (*see* published U.S. Patent Application US2005-0130923, published on Jun. 16, 2005) or alternatively 5'-substitution of a BNA (*see* PCT International Application WO 2007/134181 Published on Nov. 22, 2007 wherein LNA is substituted with for example a 5'-methyl or a 5'-vinyl group).

[00253] Examples of nucleosides having modified sugar moieties include without limitation nucleosides comprising 5'-vinyl, 5'-methyl (R or 5), 4'-S, 2'-F, 2'-OCH_3, 2'-OCH_2CH_3, 2'-O CH_2 CH_2F and 2'-$O(CH_2)_2OCH_3$ substituent groups. The substituent at the 2' position can also be selected from allyl, amino, azido, thio, O-allyl, O—C_1-C_{10} alkyl, OCF_3, OCH_2F, $O(CH_2)_2S$ CH_3, $O(CH_2)_2$—O—$N(R_m)(R_n)$, O—CH_2—C(=O)—$N(R_m)(R_n)$, and O—CH_2—C(=O)—$N(R_1)$—($CH_2)_2$—$N(R_m)(R_n)$- , where each R_l, R_m and R_n is, independently, H or substituted or unsubstituted C_1-C_{10} alkyl.

[00254] Additional examples of modified sugar moieties include a 2'-OMe modified sugar moiety, bicyclic sugar moiety, 2'-O-(2-methoxyethyl) (2'-MOE), 2'-O-(N-methylacetamide), 2'-deoxy-2'-fluoro nucleoside, 2'-fluoro-β-D-arabinonucleoside, locked nucleic acid (LNA), constrained ethyl 2'-4'-bridged nucleic acid (cEt) (4'-$CH(CH_3)$-O-2'), *S*-constrained ethyl (*S*-cEt) 2'-4'-bridged nucleic acid, 4' -CH_2-O-CH_2-2', 4' -CH_2-N(R)-2', 4'-$CH(CH_2OCH_3)$-O-2'

("constrained MOE" or "cMOE"), hexitol nucleic acids (HNA), and tricyclic analog (*e.g.*, tcDNA).

[00255] In some embodiments, AONs comprise a 2'-O-methyl nucleoside (2'OMe) (*e.g.*, an AON comprising one or more 2'OMe modified sugar), 2'-O-(2-methoxyethyl) (2'-MOE) (*e.g.*, an AON comprising one or more 2'-MOE modified sugar (*e.g.*, 2'-MOE)), peptide nucleic acid (PNA) (*e.g.*, an AON comprising one or more *N*-(2-aminoethyl)-glycine units linked by amide bonds or carbonyl methylene linkage as repeating units in place of a sugar-phosphate backbone), locked nucleic acid (LNA) (*e.g.*, an AON comprising one or more locked ribose, and can be a mixture of 2'-deoxy nucleotides or 2'OMe nucleotides), constrained ethyl 2'-4'-bridged nucleic acid (c-ET) (*e.g.*, an AON comprising one or more cET sugar), cMOE (*e.g.*, an AON comprising one or more cMOE sugar), morpholino oligomer (*e.g.*, an AON comprising a backbone comprising one or more PMO), deoxy-2'-fluoro nucleoside (*e.g.*, an AON comprising one or more 2'-fluoro-β-D-arabinonucleoside), 2′-O,4′-C-ethylene linked nucleic acid (ENA) (*e.g.*, an AON comprising one or more ENA modified sugar), hexitol nucleic acid (HNA) (*e.g.*, an AON comprising one or more HNA modified sugar), or tricyclic analog (tcDNA) (*e.g.*, an AON comprising one or more tcDNA modified sugar).

[00256] As used herein, "bicyclic nucleosides" refer to modified nucleosides comprising a bicyclic sugar moiety. Examples of bicyclic nucleosides include without limitation nucleosides comprising a bridge between the 4' and the 2' ribosyl ring atoms. In certain embodiments, antisense compounds provided herein include one or more bicyclic nucleosides comprising a 4' to 2' bridge. Examples of such 4' to 2' bridged bicyclic nucleosides, include but are not limited to one of the formulae: 4'-(CH_2)—O-2' (LNA); 4'-(CH_2)—S-2'; 4'-(CH_2)$_2$—O-2' (ENA); 4'-CH(CH_3)—O-2' and 4'-CH(CH_2OCH_3)—O-2' (and analogs thereof (*see* U.S. Pat. No. 7,399,845, issued on Jul. 15, 2008)); 4'-C(CH_3)(CH_3)—O-2' (and analogs thereof (*see* published International Application WO/2009/006478, published Jan. 8, 2009)); 4'-CH_2—N(OCH_3)-2' (and analogs thereof (*see* published International Application WO/2008/150729, published Dec. 11, 2008)); 4'-CH_2—O—N(CH_3)-2' (*see* published U.S. Patent Application US2004-0171570, published Sep. 2, 2004); 4'- CH_2—N(R)—O-2', wherein R is H, C_1-C_{12} alkyl, or a protecting group (*see* U.S. Pat. No. 7,427,672, issued on Sep. 23, 2008); 4'-CH_2—C(H)(CH_3)-2' (see Chattopadhyaya et al., J. Org. Chem., 2009, 74, 118-134); and 4'-CH_2—C—(=CH_2)-2' (and analogs thereof (*see* published International Application WO 2008/154401, published on Dec. 8, 2008)).

[00257] Further reports related to bicyclic nucleosides can also be found in published literature (*see* for example: Singh et al., Chem. Commun., 1998, 4, 455-456; Koshkin et al., Tetrahedron, 1998, 54, 3607-3630; Wahlestedt et al., Proc. Natl. Acad. Sci. U.S.A., 2000, 97, 5633-5638;

Kumar et al., Bioorg. Med. Chem. Lett., 1998, 8, 2219-2222; Singh et al., J. Org. Chem., 1998, 63, 10035-10039; Srivastava et al., J. Am. Chem. Soc., 2007, 129(26) 8362-8379; Elayadi et al., Curr. Opinion Invest. Drugs, 2001, 2, 558-561; Braasch et al., Chem. Biol., 2001, 8, 1-7; and Orum et al., Curr. Opinion Mol. Ther., 2001, 3, 239-243; U.S. Pat. Nos. 6,268,490; 6,525,191; 6,670,461; 6,770,748; 6,794,499; 7,034,133; 7,053,207; 7,399,845; 7,547,684; and 7,696,345; U.S. Patent Publication No. US2008-0039618; US2009-0012281; U.S. Patent Ser. No. 60/989,574; 61/026,995; 61/026,998; 61/056,564; 61/086,231; 61/097,787; and 61/099,844; Published PCT International applications WO 1994/014226; WO 2004/106356; WO 2005/021570; WO 2007/134181; WO 2008/150729; WO 2008/154401; and WO 2009/006478. Each of the foregoing bicyclic nucleosides can be prepared having one or more stereochemical sugar configurations including for example α-L-ribofuranose and β-D-ribofuranose (see PCT international application PCT/DK98/00393, published on Mar. 25, 1999 as WO 99/14226).

[00258] In certain embodiments, bicyclic sugar moieties of BNA nucleosides include, but are not limited to, compounds having at least one bridge between the 4' and the 2' position of the pentofuranosyl sugar moiety wherein such bridges independently comprises 1 or from 2 to 4 linked groups independently selected from $—[C(R_a)(R_b)]_n—$, $—C(R_a)=C(R_b)—$, $—C(R_a)=N—$, $—C(=O)—$, $—C(=NR_a)—$, $—C(=S)—$, $—O—$, $—Si(R_a)_2—$, $—S(=O)_x—$, and $—N(R_a)—$; wherein:

x is 0, 1, or 2;

n is 1, 2, 3, or 4;

each R_a and R_b is, independently, H, a protecting group, hydroxyl, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, heterocycle radical, substituted heterocycle radical, heteroaryl, substituted heteroaryl, C_5-C_7 alicyclic radical, substituted C_5-C_7 alicyclic radical, halogen, OJ_1, NJ_1J_2, SJ_1, N_3, $COOJ_1$, acyl (C(=O)—H), substituted acyl, CN, sulfonyl ($S(=O)_2$-J_1), or sulfoxyl (S(=O)-J_1); and

each J_1 and J_2 is, independently, H, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, acyl (C(=O)—H), substituted acyl, a heterocycle radical, a substituted heterocycle radical, C_1-C_{12} aminoalkyl, substituted C_1-C_{12} aminoalkyl or a protecting group.

[00259] In certain embodiments, the bridge of a bicyclic sugar moiety is $—[C(R_a)(R_b)]_n—$, $—[—[C(R_a)(R_b)]_n—O—$, $—C(R_aR_b)—N(R)—O—$ or $—C(R_aR_b)—O—N(R)—$. In certain embodiments, the bridge is 4'-CH_2-2', 4'-$(CH_2)_2$-2', 4'-$(CH_2)_3$-2', 4'-CH_2—O-2', 4'-$(CH_2)_2$—O-2', 4'-CH_2—O—N(R)-2' and 4'-CH_2—N(R)—O-2'- wherein each R is, independently, H, a protecting

group or C_1-C_{12} alkyl, each R_a and R_b is, independently, H, a protecting group, hydroxyl, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, heterocycle radical, substituted heterocycle radical, heteroaryl, substituted heteroaryl, C_5-C_7 alicyclic radical, substituted C_5-C_7 alicyclic radical, halogen, OJ_1, NJ_1J_2, SJ_1, N_3, $COOJ_1$, acyl (C(=O)--H), substituted acyl, CN, sulfonyl ($S(=O)_2$-J_1), or sulfoxyl (S(=O)-J_1).

[00260] In certain embodiments, bicyclic nucleosides are further defined by isomeric configuration. For example, a nucleoside comprising a 4'-2' methylene-oxy bridge, may be in the α-L configuration or in the β-D configuration. Previously, α-L-methyleneoxy (4'-CH_2—O-2') BNA's have been incorporated into antisense oligonucleotides that showed antisense activity (Frieden et al., Nucleic Acids Research, 2003, 21, 6365-6372).

[00261] In certain embodiments, bicyclic nucleosides include, but are not limited to, α-L-methyleneoxy (4'-CH_2—O-2') BNA, β-D-methyleneoxy (4'-CH_2—O-2') BNA, ethyleneoxy (4'-$(CH_2)_2$—O-2) BNA, aminooxy (4'-CH_2—O—N(R)-2') BNA, oxyamino (4'-CH_2—N(R)—O-2') BNA, methyl(methyleneoxy) (4'-$CH(CH_3)$—O-2') BNA, methylene-thio (4'-CH_2—S-2') BNA, methylene-amino (4'-CH_2—N(R)-2') BNA, methyl carbocyclic (4'-CH_2—$CH(CH_3)$-2') BNA, and propylene carbocyclic (4'-$(CH_2)_3$-2') BNA.

[00262] As used herein, "locked nucleic acid" or "LNA" or "LNA nucleosides" refer to modified nucleosides having a bridge (*e.g.*, methylene, ethylene, aminooxy, or oxyimino bridge) connecting two carbon atoms between the 4' and 2' position of the nucleoside sugar unit, thereby forming a bicyclic sugar. Examples of such bicyclic sugar include, but are not limited to (A) α-L-Methyleneoxy (4'-CH_2—O-2') LNA, (B) β-D-Methyleneoxy (4'-CH_2—O-2') LNA, (C) Ethyleneoxy (4'-$(CH_2)_2$—O-2') LNA, (D) Aminooxy (4'-CH_2—O—N(R)-2') LNA and (E) Oxyamino (4'-CH_2—N(R)—O-2') LNA; wherein R is H, C_1-C_{12} alkyl, or a protecting group (*see* U.S. Pat. No. 7,427,672, issued on Sep. 23, 2008).

[00263] As used herein, LNA nucleosides include, but are not limited to, nucleosides having at least one bridge between the 4' and the 2' position of the sugar wherein each of the bridges independently comprises 1 or from 2 to 4 linked groups independently selected from —$[C(R_1)(R_2)]_n$ —, —$C(R_1)$=$C(R_2)$—, —$C(R_1)$=N—, —C(=NR_1)—, —C(=O)—, —C(=S)—, —O—, —$Si(R_1)_2$—, —$S(=O)_x$— and —$N(R_1)$ —; wherein: x is 0, 1, or 2; n is 1, 2, 3, or 4; each R_1 and R_2 is, independently, H, a protecting group, hydroxyl, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, a heterocycle radical, a substituted heterocycle radical, heteroaryl, substituted heteroaryl, C_5-C_7 alicyclic radical, substituted C_5-C_7 alicyclic radical, halogen, OJ_1,

NJ_1J_2, SJ_1, N_3, $COOJ_1$, acyl (C(=O) —H), substituted acyl, CN, sulfonyl ($S(=O)_2$-J_1), or sulfoxyl (S(=O)- J_1); and each J_1 and J_2 is, independently, H, C_1-C_{12} alkyl, substituted C_1-C_{12} alkyl, C_2-C_{12} alkenyl, substituted C_2-C_{12} alkenyl, C_2-C_{12} alkynyl, substituted C_2-C_{12} alkynyl, C_5-C_{20} aryl, substituted C_5-C_{20} aryl, acyl (C(=O) —H), substituted acyl, a heterocycle radical, a substituted heterocycle radical, C_1-C_{12} aminoalkyl, substituted C_1-C_{12} aminoalkyl or a protecting group.

[00264] Examples of 4'-2' bridging groups encompassed within the definition of LNA include, but are not limited to one of formulae: —$[C(R_1)(R_2)]_n$ —, — $[C(R_1)(R_2)]_n$—O—, — $C(R_1R_2)$—$N(R_1)$—O— or —$C(R_1R_2)$—O—$N(R_1)$—. Furthermore, other bridging groups encompassed with the definition of LNA are 4'-CH_2-2', 4'-$(CH_2)_2$-2', 4'-$(CH_2)_3$-2', 4'-CH_2—O-2', 4'-$(CH_2)_2$—O-2', 4'-CH_2—O—$N(R_1)$-2' and 4'- CH_2—$N(R_1)$—O-2'- bridges, wherein each R_1 and R_2 is, independently, H, a protecting group or C_1-C_{12} alkyl.

[00265] Also included within the definition of LNA according to the invention are LNAs in which the 2'-hydroxyl group of the ribosyl sugar ring is connected to the 4' carbon atom of the sugar ring, thereby forming a bridge to form the bicyclic sugar moiety. The bridge can be a methylene (—CH_2—) group connecting the 2' oxygen atom and the 4' carbon atom, for which the term methyleneoxy (4'-CH_2—O-2') LNA is used. Furthermore, in the case of the bicyclic sugar moiety having an ethylene bridging group in this position, the term ethyleneoxy (4'-CH_2CH_2—O-2') LNA is used. α-L-methyleneoxy (4'-CH_2-O-2'), an isomer of methyleneoxy (4'-CH_2—O-2') LNA is also encompassed within the definition of LNA, as used herein.

[00266] In various embodiments, AONs disclosed herein include one or more 2'-O-(2-methoxyethyl) (2'-MOE) nucleosides. In various embodiments, AONs disclosed herein include two, three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventee, eighteen, nineteen, twenty, twenty one, twenty two, twenty three, twenty four, or twenty five 2'-*O*-(2-methoxyethyl) (2'-MOE) nucleosides. In various embodimens, AONs disclosed herein include more than twenty five 2'-*O*-(2-methoxyethyl) (2'-MOE) nucleosides.

[00267] In some embodiments, AONs include modified sugar moieties that are designed according to the gapmer design of the gapmer AON. In various embodiments, gapmer AONs include one or more modified sugar moieties. In various embodiments, the 5' wing region includes at least one modified sugar moiety. In various embodiments, the 3' wing region includes at least one modified sugar moiety. In various embodiments, the 5' wing region includes at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, at least nine, or at least ten modified sugar moieties. In various embodiments, the 3' wing region includes at least two, at least three, at least four, at least five, at least six, at least seven, at least eight, at least nine, or at least ten modified sugar moieties. In some embodiments, each of the 5' wing region

and/or the 3' wing region includes from 1 to 7 modified sugar moieties, such as from two to six modified sugar moieties, from two to five modified sugar moieties, from two to four modified sugar moieties, or from one to three modified sugar moieties. In particular embodiments, the 5' wing region includes 3 modified sugar moieties and the 3' wing region includes 3 modified sugar moieties. In particular embodiments, the 5' wing region includes 4 modified sugar moieties and the 3' wing region includes 4 modified sugar moieties. In particular embodiments, the 5' wing region includes 5 modified sugar moieties and the 3' wing region includes 5 modified sugar moieties.

[00268] In various embodiments, the nucleosides with a modified sugar moiety in the 5' and 3' wing regions are any one of a ribose in which the 2′-OH group may be replaced by any one selected from the group consisting of OR, R, R′OR, SH, SR, NH_2, NR_2, N_3, CN, F, Cl, Br, and I (wherein R is an alkyl or aryl and R′ is an alkylene), a 2'-O-methyl (2'-OMe) nucleoside, 2'-O-(2-methoxyethyl) (2'-MOE) nucleoside, peptide nucleic acid (PNA), bicyclic nucleic acid (BNA), 2'-deoxy-2'-fluoro nucleoside, 2'-fluoro-β-D-arabinonucleoside, locked nucleic acid (LNA), constrained ethyl 2'-4'-bridged nucleic acid (cEt), *S*-cEt, morpholino oligomer, tcDNA, 2′-O,4′-C-ethylene linked nucleic acid (ENA), hexitol nucleic acids (HNA), and tricyclic analog (*e.g.*, tcDNA).

[00269] In some embodiments, the 5' wing region and/or 3′ wing region comprises at least one 2'-MOE nucleoside. In some embodiments both the 5′ and 3′ wing regions comprise at least one 2'-MOE nucleoside. In some embodiments, each of the 5′ wing region and the 3′ wing region comprises two, three, four, five, six, seven, eight, nine, or ten 2'-MOE nucleosides. In particular embodiments, each of the 5′ wing region and the 3′ wing region comprises four 2'-MOE nucleosides. In particular embodiments, each of the 5′ wing region and the 3′ wing region comprises five 2'-MOE nucleosides. In some embodiments, all the nucleosides in each of the 5' wing region and the 3' wing region are 2'-MOE nucleosides.

[00270] In other embodiments, the wing regions may comprise both 2'-MOE nucleosides and other nucleosides (mixed wings), such as DNA nucleosides and/or non-MOE modified nucleosides, such as bicyclic nucleosides (BNAs) (*e.g.*, locked nucleic acid (LNA) nucleosides or constrained ethyl 2'-4'-bridged nucleic acid (cEt) nucleosides), 2'-O-methyl nucleosides, tricycloDNA, *S*-cEt, morpholinos, or other 2' substituted nucleosides.

[00271] In some embodiments, the 5' wing region or the 3′ wing region comprises at least one BNA (*e.g.*, at least one LNA nucleoside or cET nucleoside). In some embodiments each of the 5′ and 3′ wing regions comprises a BNA. In some embodiments all the nucleosides in the 5' and 3' wing regions are BNAs. In a further embodiment, the BNAs in the 5' and/or 3' wing regions are

independently selected from the group comprising oxy-LNA, thio-LNA, amino-LNA, cET, and/or ENA, in either the beta-D or alpha-L configurations or combinations thereof.

[00272] In some embodiments, the 5' and/ or 3′ wing comprises at least one 2'-O-methyl nucleoside. In some embodiments, the 5′ wing comprises at least one 2'-O-methyl nucleoside. In some embodiments both the 5′ and 3′ wing regions comprise a 2'-O-methyl nucleoside. In some embodiments all the nucleosides in the wing regions are 2'-O-methyl nucleosides.

Modified Nucleobase

[00273] AONs, such as AONs with a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), include one or more modified nucleobases. Examples of modified nucleobases, including a 5-methylpyrimidine, for example, 5-methylcytosine or 5-methoxyuridine, a 5-methylpurine, for example, 5-methylguanine, or pseudouridine.

[00274] In various embodiments, an AON includes at least one modified nucleobase. In various embodiments, an AON includes two, three, four, five, six, seven, eight, nine, or ten modified nucleobases. In various embodiments, an AON includes at least one 5-methylcytosine nucleobase. In various embodiments, an AON includes two, three, four, five, six, seven, eight, nine, or ten 5-methylcytosine nucleobases.

[00275] In various embodiments, an AON includes both modified and unmodified nucleobases. For example, an AON may include both cytosines and 5-methyl cytosines. In some embodiments, an AON may include one, two three, four, five, six, seven, eight, nine, or ten cytosines and further include one, two, three, four, five, six seven, eight, nine, or ten 5-methylcytosines.

[00276] In various embodiments, each of a particular type of nucleobase in the AON is replaced with a corresponding modified nucleobase. For example, every guanine of the AON is replaced with a 5-methyl guanine. As another example, every cytosine of the AON is replaced with a 5-methylcytosine.

[00277] In some embodiments, an AON includes modified nucleobases that are designed according to the gapmer design of the gapmer AON. In various embodiments, the linked nucleosides of the 5' wing region, the linked nucleosides of the 3' wing region, or the linked nucleosides of the central region comprise one or more modified nucleobases. In some embodiments, the 5' wing region and/or the 3' wing region includes one to ten modified nucleobases, such as from two to eight modified nucleobases, from three to six modified

nucleobases, or from four to five modified nucleobases. In some embodiments, the 5' wing region and/or the 3' wing region includes one, two, three, four, five, six, seven, eight, nine, or ten modified nucleobases. In some embodiments, the central region includes one to ten modified nucleobases, such as from two to eight modified nucleobases, from three to six modified nucleobases, or from four to five modified nucleobases. In some embodiments, the central region includes one, two, three, four, five, six, seven, eight, nine, or ten modified nucleobases. Examples of modified nucleobases include a 5-methylpyrimidine, for example, pseudouridine, 5-methylcytosine or 5-methoxyuridine, a 5-methylpurine, for example, 5-methylguanine.

[00278] In various embodiments, at least one cytosine in the 5' wing region and/or the 3' wing region of the AON is replaced with a modified nucleobase, such as a 5-methylcytosine. In various embodiments, at least one cytosine in the 5' wing region is replaced with a modified nucleobase, such as a 5-methylcytosine. In various embodiments, at least one cytosine in the 3' wing region is replaced with a modified nucleobase, such as a 5-methylcytosine. In various embodiments, at least one cytosine in the central region is replaced with a modified nucleobase, such as a 5-methylcytosine. In various embodiments, all cytosines in the 5' wing region are replaced with modified nucleobases, such as 5-methylcytosines. In various embodiments, all cytosines in the 3' wing region are replaced with modified nucleobases, such as 5-methylcytosines. In various embodiments, all cytosines in the central region are replaced with modified nucleobases, such as 5-methylcytosines.

[00279] In particular embodiments, all cytosines in the 5' wing region, all cytosines in the 3' wing region, and all cytosines in the central region are replaced with modified nucleobases, such as 5-methylcytosines. In particular embodiments, all cytosines in the 5' wing region, all cytosines in the 3' wing region are replaced with modified nucleobases, such as 5-methylcytosines; however, all cytosines in the central region are unmodified nucleobases.

Modified Oligonucleotides

[00280] Described herein are additional embodiments of modified oligonucleotides, which can include any of the modified internucleoside linkages and/or modified nucleosides (*e.g.*, modified sugar moieties, and/or modified nucleobases) described above.

[00281] In some embodiments, an AON, or a pharmaceutically acceptable salt thereof, comprises the sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), where at least one nucleoside of the sequence is substituted with a 2'-O-(2-methoxyethyl) nucleoside, a 2'-O-methyl

nucleoside, a 2'-O-(N-methylacetamide) nucleoside, a 2'-deoxy-2'-fluoro nucleoside, a 2'-fluoro-β-D-arabinonucleoside, a bicylic nucleic acid, a bridged nucleic acid, a locked nucleic acid (LNA), a constrained ethyl (cET) nucleic acid, a tricyclo-DNA (tcDNA), a 2′-O,4′-C-ethylene linked nucleic acid (ENA), or a peptide nucleic acid (PNA). In particular embodiments, at least one internucleoside linkage of the AON is a phosphorothioate linkage. In some embodiments, all internucleoside linkages of the AON are phosphorothioate linkages. Also described herein are pharmaceutical compositions that include any of the foregoing antisense oligonucleotides, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable excipient.

[00282] AONs described herein, can include chemically modified nucleosides, including modified ribonucleosides and/or modified deoxyribonucleosides. Chemically modified nucleosides include 2'-substituted nucleosides in which the 2' position of the sugar ring includes a moiety other than -H or -OH (for example, -F or an O-alkyl group). For example, chemically modified nucleosides include, but are not limited to 2'-O-(2-methoxyethyl) modifications, for example, 2'-O-(2-methoxyethyl)guanosine, 2'-O-(2-methoxyethyl)adenosine, 2'-O-(2-methoxyethyl)cytosine, 2'-O-(2-methoxyethyl)thymidine, and 2'-O-(2-methoxyethyl)-5-methylcytosine.

[00283] In some embodiments, AONs can include chemically modified nucleosides, for example, 2' O-methyl ribonucleosides, for example, 2' O-methyl cytidine, 2' O-methyl guanosine, 2' O-methyl uridine, and/or 2' O-methyl adenosine. AONs described herein, can also include one or more chemically modified bases, including a 5-methyl pyrimidine, for example, 5-methylcytosine, and/or a 5-methyl purine, for example, 5-methyl guanine. AONs described herein, can also include any of the following chemically modified nucleosides: 5-methyl-2'-O-methylcytidine, 5-methyl-2'-O-methylthymidine, 5-methylcytidine, 5-methyluridine, and/or 5-methyl 2'-deoxycytidine.

[00284] It is contemplated that in some embodiments, a disclosed AON may optionally have at least one modified nucleobase, *e.g.*, 5-methylcytosine, and/or at least one methylphosphonate nucleotide, which is placed, for example, either at only one of the 5′ or 3′ ends or at both 5′ and 3′ ends or along the oligonucleotide sequence.

[00285] In certain embodiments, the disclosure provides mixed modalities of AONs with combinations of modified nucleosides, *e.g.*, a combination of a peptide nucleic acid (PNA) and a locked nucleic acid (LNA). Chemically modified nucleosides also include, but are not limited to, locked nucleic acids (LNAs), 2'-O-methyl, 2'-fluoro, and 2'-fluoro-β-D-arabinonucleotide (FANA) modifications. Chemically modified nucleosides that can be included in AONs described herein are described in Johannes and Lucchino, (2018) "Current Challenges in Delivery

and Cytosolic Translocation of Therapeutic RNAs" *Nucleic Acid Ther.* 28(3): 178–93; Rettig and Behlke, (2012) "Progress toward in vivo use of siRNAs-II" *Mol Ther* 20:483–512; and Khvorova and Watts, (2017) "The chemical evolution of oligonucleotide therapies of clinical utility" *Nat Biotechnol.*, 35(3):238-48, the contents of each of which are incorporated by reference herein.

[00286] AONs described herein can include chemical modifications that promote stabilization of an oligonucleotide's terminal 5'-phosphate and phosphatase-resistant analogs of 5′-phosphate. Chemical modifications that promote oligonucleotide terminal 5'-phosphate stabilization or which are phosphatase-resistant analogs of 5′-phosphate include, but are not limited to, 5′-methyl phosphonate, 5′-methylenephosphonate, 5′-methylenephosphonate analogs, 5′-*E*-vinyl phosphonate (5′-*E*-VP), 5′-phosphorothioate, and 5′-*C*-methyl analogs. Chemical modifications that promote AON terminal 5'-phosphate stabilization and phosphatase-resistant analogues of 5′-phosphate are described in Khvorova and Watts, (2017) "The chemical evolution of oligonucleotide therapies of clinical utility" *Nat Biotechnol.*, 35(3):238-48, the contents of which are incorporated by reference herein.

[00287] In some embodiments described herein, an AON, or a pharmaceutically acceptable salt thereof, is a modified oligonucleotide which includes the sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), and at least one nucleoside linkage of the nucleotide sequence is a a phosphorothioate linkage, an alkyl phosphate linkage, an alkylphosphonate linkage, a 3-methoxypropyl phosphonate linkage, a phosphorodithioate linkage, a phosphotriester linkage, a methylphosphonate linkage, an aminoalkylphosphotriester linkage, an alkylene phosphonate linkage, a phosphinate linkage, a phosphoramidate linkage, a phosphoramidothioate linkage, a phosphorodiamidate (*e.g.*, comprising a phosphorodiamidate morpholino (PMO), 3' amino ribose, or 5' amino ribose) linkage, an aminoalkylphosphoramidate linkage, a thiophosphoramidate linkage, a thionoalkylphosphonate linkage, a thionoalkylphosphotriester linkage, a thiophosphate linkage, a selenophosphate linkage, and a boranophosphate linkage. In particular embodiments, at least one internucleoside linkage of the nucleotide sequence is a phosphorothioate linkage. In some embodiments of AONs described herein, one, two, three, or more internucleoside linkages of the nucleotide sequence is a phosphorothioate linkage. In various embodiments of AONs described herein, all internucleoside linkages of the nucleotide sequence are phosphorothioate linkages. Thus, in some embodiments, all of the nucleotide linkages of an AON sequence of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with

one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, are phosphorothioate linkages.

[00288] Contemplated AONs may optionally include at least one modified sugar. For example, the sugar moiety of at least one nucleotide constituting the oligonucleotide is a ribose in which the 2′-OH group may be replaced by any one selected from the group consisting of OR, R, R′OR, SH, SR, NH_2, NR_2, N_3, CN, F, Cl, Br, and I (wherein R is an alkyl or aryl and R′ is an alkylene).

[00289] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 5-10-5 gapmer AON can have the sequence of sssssooooooooosssss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond) where all the phosphorothioate bonds are in the 5' wing region or the 3' wing region and all the phosphodiester bonds are in the central region of the AON. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00290] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of ooooossssssssssooooo (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00291] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified

nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssssssssssssssss (where "s" refers to a phosphorothioate bond) where all internucleoside linkages of the AON are phosphorothioate bonds. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00292] In particular embodiments, an AON has a structure of eee-d8-eee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes three 2'-MOE modified nucleosides, the gap region includes 8 oligonucloetide units comprising at least 4 contiguous nucleobases, and the 3' wing region includes three 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssooooooosss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond) where all the phosphorothioate bonds are in the 5' wing region or the 3' wing region and all the phosphodiester bonds are in the central region of the AON. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00293] In particular embodiments, an AON has a structure of eee-d8-eee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes three 2'-MOE modified nucleosides, the gap region includes 8 oligonucleotide units comprising 4 contiguous DNA nucleobases, and the 3' wing region includes three 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of ooosssssssooo (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond) where all the phosphodiester bonds are in the 5' wing region or the 3' wing region and all the phosphorothioate bonds are in the central region of the AON. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00294] In particular embodiments, an AON has a structure of eee-d8-eee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes three 2'-MOE modified nucleosides, the gap region includes 8 oligonucleotide units comprising 4 contiguous DNA nucleobases, and the 3' wing region includes three 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssssssssssss (where "s" refers to a phosphorothioate bond) where all internucleoside linkages of the AON are phosphorothioate bonds. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00295] In particular embodiments, an AON has a structure of eee-d10-eee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes three 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes three 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssooooooooosss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond) where all the phosphorothioate bonds are in the 5' wing region or the 3' wing region and all the phosphodiester bonds are in the central region of the AON. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00296] In particular embodiments, an AON has a structure of eee-d10-eee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes three 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes three 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of ooosssssssssooo (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine).

[00297] In particular embodiments, an AON has a structure of eee-d10-eee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes three 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes three 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssssssssssss (where "s" refers to a phosphorothioate bond) where all internucleoside linkages of the AON are phosphorothioate bonds. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00298] In particular embodiments, an AON has a structure of eeee-d10-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes four 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of ssssoooooooossss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond) where all the phosphorothioate bonds are in the 5' wing region or the 3' wing region and all the phosphodiester bonds are in the central region of the AON. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00299] In particular embodiments, an AON has a structure of eeee-d10-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes four 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of oooossssssssoooo (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00300] In particular embodiments, an AON has a structure of eeee-d10-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes four 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssssssssssssss (where "s" refers to a phosphorothioate bond) where all internucleoside linkages of the AON are phosphorothioate bonds. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00301] In particular embodiments, an AON has a structure of eeee-d8-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes four 2'-MOE modified nucleosides, the gap region includes 8 oligonucleotide units comprising 4 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of ssssooooooossss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond) where all the phosphorothioate bonds are in the 5' wing region or the 3' wing region and all the phosphodiester bonds are in the central region of the AON. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00302] In particular embodiments, an AON has a structure of eeee-d8-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes four 2'-MOE modified nucleosides, the gap region includes 8 oligonucleotide units comprising 4 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of oooossssssssoooo (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing

region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00303] In particular embodiments, an AON has a structure of eeee-d8-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes four 2'-MOE modified nucleosides, the gap region includes 8 oligonucleotide units comprising 4 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssssssssssssss (where "s" refers to a phosphorothioate bond) where all internucleoside linkages of the AON are phosphorothioate bonds. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine).

[00304] In particular embodiments, an AON has a structure of eeeeee-d11-eeeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d11" denotes a contiguous 11 DNA nucleobase sequence). In this embodiment, the 5' wing region includes six 2'-MOE modified nucleosides, the gap region includes 11 contiguous DNA nucleobases, and the 3' wing region includes six 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 6-11-6 gapmer AON can have the sequence of sssssssssssssssssssss (where "s" refers to a phosphorothioate bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00305] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 5-10-5 gapmer AON can have the sequence of sosossssssssssosos (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00306] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 5-10-5 gapmer AON can have the sequence of soooossssssssssooos (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00307] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 5-10-5 gapmer AON can have the sequence of soooossssssssssooss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00308] In particular embodiments, an AON has a structure of eeeee-d8-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d8" denotes a contiguous 8 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 8 oligonucleotide units comprising 4 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 5-8-5 gapmer AON can have the sequence of sosssssssssssoss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00309] In particular embodiments, an AON has a structure of eeeee-d10-eeeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes five 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes five 2'-MOE modified nucleosides. In various embodiments, the internucleoside linkages of the 5-10-5 gapmer AON can have the sequence of sosssssssssssssosss (where "s" refers to a phosphorothioate bond and "o" refers to a phosphodiester bond). In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

[00310] In particular embodiments, an AON has a structure of eeeeee-d10-eeee (where "e" denotes a 2'-MOE modified nucleoside and where "d10" denotes a contiguous 10 DNA nucleobase sequence). In this embodiment, the 5' wing region includes six 2'-MOE modified nucleosides, the gap region includes 10 contiguous DNA nucleobases, and the 3' wing region includes four 2'-MOE modified nucleosides. The internucleoside linkages of the AON can have the sequence of sssssssssssssss (where "s" refers to a phosphorothioate bond) where all internucleoside linkages of the AON are phosphorothioate bonds. In various embodiments, the AON includes unmodified cytosines. In various embodiments, the AON includes modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the 5' wing region and the 3' wing region are modified cytosines (*e.g.*, 5-methylcytosine). In various embodiments, all cytosines of the central region are modified cytosines (*e.g.*, 5-methylcytosine).

Target Gene Product

[00311] Generally, an AON disclosed herein includes linked nucleosides with a nucleobase sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a portion of a target gene product. Example target gene products include any of PPM1A, ATXN2, SOD1, or MAPT gene products. In particular embodiments, an AON disclosed herein includes linked nucleosides with a nucleobase sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a portion of a gene product. In particular embodiments, an AON disclosed herein includes linked nucleosides with a nucleobase sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a portion of an ATXN2 gene product.

In particular embodiments, an AON disclosed herein includes linked nucleosides with a nucleobase sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a portion of a SOD1 gene product. In particular embodiments, an AON disclosed herein includes linked nucleosides with a nucleobase sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a portion of a MAPT gene product.

[00312] In embodiments of the invention described herein, an AON can target gene products of genes of one or more species. For example, an AON can target a gene product of a mammalian gene, for example, a human (*i.e.*, *Homo sapiens*) gene, a rodent gene (for example, a mouse (*Mus musculus*) gene), and/or a primate gene (for example, a *Macaca fascicularis* gene or a *Macaca mulatta* gene). In particular embodiments, the AON targets a human gene product.

[00313] A gene product can be, for example, an RNA gene product, for example, an mRNA gene product, or a protein product of a target gene. In some embodiments, the AON includes a sequence that is at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or that is 100% complementary to a sequence of a gene or a RNA, for example a mRNA or a pre-mRNA, or a portion thereof. In some embodiments the AON includes a nucleobase sequence that is complementary to a portion of a sequence that is shared between genes or RNAs (for example, mRNAs) of multiple species. For example, in some embodiments, the AON is an antisense therapeutic, for example, an AON that is complementary to a sequence shared by a human, mouse, and/or primate genes or mRNAs.

PPM1A

[00314] In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from nucleotide 41,932 to nucleotide 42,787 and from nucleotide 44,874 to nucleotide 44,990 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909) or a PPM1A coding sequence), or a portion thereof. In some embodiments of the disclosure, the PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from nucleotide 41,932 to nucleotide 42,787 and from nucleotide 44,874 to nucleotide 44,990 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909) or a PPM1A coding sequence), or a portion thereof.

[00315] In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from one or more of nucleotides 8470-8926, 41933-42787, 44874-45990, 49055-49164, 50647-50704, and 51703-58336 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909). In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from the coding region of a PPM1A gene sequence, such as a coding region including nucleotides 8470-8926, 41933-42787, 44874-45990, 49055-49164, 50647-50704, and 51703-58336 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909). In various embodiments, the PPM1A mRNA is PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910).

[00316] In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from one or more of nucleotides 8470-8926, 9629-9730, 41933-42787, and 44874-47804 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909). In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from the coding region of a PPM1A gene sequence, such as a coding region including one or more of nucleotides 8470-8926, 9629-9730, 41933-42787, and 44874-47804 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909). In various embodiments, the PPM1A mRNA is PPM1A mRNA transcript variant 2, corresponding to NCBI Reference Sequence NM_177951.3 (SEQ ID NO: 1911).

[00317] In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from one or more of nucleotides 4999-5295, 41933-42787, 44874-44990, 49055-49164, 50647-50704, 51703-58336 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909). In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA or PPM1A pre-mRNA comprising sequences from one or more coding regions of a PPM1A gene sequence, such as a coding region including nucleotides 4999-5295, 41933-42787, 44874-44990, 49055-49164, 50647-50704, 51703-58336 of a PPM1A gene sequence (for example the PPM1A gene sequence of NCBI Reference Sequence NG_029698.1 (SEQ ID NO: 1909). In various embodiments, the PPM1A mRNA is PPM1A mRNA transcript variant 3, corresponding to NCBI Reference Sequence NM_177952.3 (SEQ ID NO: 1912).

[00318] In some embodiments of the disclosure, the PPM1A gene product comprises a sequence including nucleotides 457-1429 of PPM1A mRNA transcript variant 1 (*i.e.*, nucleotides 457-1429 of, for example, PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910)), or a portion thereof. In some embodiments of the disclosure, the PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with nucleotides 457-1429 of PPM1A mRNA transcript variant 1 (*i.e.*, nucleotides 457-1429 of, for example, PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910)), or a portion thereof.

[00319] In some embodiments described herein, a PPM1A gene product is a PPM1A mRNA isoform transcript (for example, PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910)), or a portion thereof. In some embodiments described herein, a PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a PPM1A mRNA isoform transcript (for example, PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910)), or a portion thereof.

PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910)

8221 caattacata a ((SEQ ID NO: 1910)

[00320] In some embodiments described herein, a PPM1A gene product is a PPM1A mRNA isoform transcript (for example, PPM1A mRNA transcript variant 2, corresponding to NCBI Reference Sequence NM_177951.3 (SEQ ID NO: 1911)), or a portion thereof. In some embodiments described herein, a PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a PPM1A mRNA isoform transcript (for example, PPM1A mRNA transcript variant 2, corresponding to NCBI Reference Sequence NM_177951.3 (SEQ ID NO: 1911)), or a portion thereof.

[00321] In some embodiments described herein, a PPM1A gene product is a PPM1A mRNA isoform transcript (for example, PPM1A mRNA transcript variant 3, corresponding to NCBI Reference Sequence NM_177952.3 (SEQ ID NO: 1912)), or a portion thereof. In some embodiments described herein, a PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a PPM1A mRNA isoform transcript (for example, PPM1A mRNA transcript variant 3, corresponding to NCBI Reference Sequence NM_177952.3 (SEQ ID NO: 1912)), or a portion thereof.

[00322] In some embodiments described herein, a PPM1A gene product is a *Mus musculus* PPM1A mRNA isoform transcript (for example, *Mus musculus* PPM1A mRNA alpha isoform transcript, corresponding to NCBI Reference Sequence NM_008910.3 (SEQ ID NO: 1913)), or a portion thereof. In some embodiments described herein, a PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99% identity, or 100% identity with a PPM1A mRNA isoform transcript (for example, *Mus musculus* PPM1A mRNA alpha isoform transcript, corresponding to NCBI Reference Sequence NM_008910.3 (SEQ ID NO: 1913)), or a portion thereof.

[00323] In some embodiments of the disclosure, the PPM1A gene product is a PPM1A mRNA transcript variant other than the PPM1A transcripts described above (*e.g.*, PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910), PPM1A mRNA transcript variant 2, corresponding to NCBI Reference Sequence

NM_177951.3 (SEQ ID NO: 1911), PPM1A mRNA transcript variant 3, corresponding to NCBI Reference Sequence NM_177952.3 (SEQ ID NO: 1912), or *Mus musculus* PPM1A mRNA alpha isoform transcript, corresponding to NCBI Reference Sequence NM_008910.3 (SEQ ID NO: 1913)). In some embodiments, the PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99% identity, or 100% identity with a sequence homologous to a sequence of PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (SEQ ID NO: 1910), PPM1A mRNA transcript variant 2, corresponding to NCBI Reference Sequence NM_177951.3 (SEQ ID NO: 1911), PPM1A mRNA transcript variant 3, corresponding to NCBI Reference Sequence NM_177952.3 (SEQ ID NO: 1912), or *Mus musculus* PPM1A mRNA alpha isoform transcript, corresponding to NCBI Reference Sequence NM_008910.3 (SEQ ID NO: 1913). In some embodiments, the PPM1A gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a sequence homologous to nucleotides 457-1429 of PPM1A mRNA transcript variant 1, corresponding to NCBI Reference Sequence NM_021003.5 (*i.e.*, nucleotides 457-1429 of SEQ ID NO: 1910), or a portion thereof.

ATXN2

[00324] In some embodiments of the disclosure, the ATXN2 gene product is an ATNX2 mRNA or ATNX2 pre-mRNA comprising sequences from an ATXN2 gene sequence (for example the ATXN2 gene sequence of NCBI Reference Sequence NG_011572.3 (SEQ ID NO: 149355), the ATXN2 gene sequence of NCBI Reference Sequence NC_000012.12 (Reference GRCh38.p13 Primary Assembly), or an ATXN2 coding sequence), or a portion thereof. In some embodiments of the disclosure, the ATXN2 gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with an ATXN2 mRNA or ATXN2 pre-mRNA sequence (for example the ATXN2 gene sequence of NCBI Reference Sequence NG_011572.3 (SEQ ID NO: 149355), the ATXN2 gene sequence of NCBI Reference Sequence NC_000012.12 (Reference GRCh38.p13 Primary Assembly), or an ATXN2 coding sequence), or a portion thereof.

NCBI Reference NM_001310121.1 (SEQ ID NO: 149357)

[00326] In various embodiments, the ATXN2 gene product is an ATXN2 mRNA isoform comprising NCBI Reference Sequence NM_001310123.1 (SEQ ID NO: 149358). In various embodiments, the ATXN2 gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with an ATXN2 mRNA isoform, comprising NCBI Reference Sequence NM_001310123.1 (SEQ ID NO: 149358).

[00327] In various embodiments, the ATXN2 gene product is an ATXN2 mRNA isoform comprising NCBI Reference Sequence NM_001372574.1 (SEQ ID NO: 149359). In various embodiments, the ATXN2 gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with an ATXN2 mRNA isoform, comprising NCBI Reference Sequence NM_001372574.1 (SEQ ID NO: 149359).

[00328] In various embodiments, the ATXN2 gene product is an ATXN2 mRNA isoform comprising NCBI Reference Sequence NM_002973.4 (SEQ ID NO: 149360). In various embodiments, the ATXN2 gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with an ATXN2 mRNA isoform, comprising NCBI Reference Sequence NM_002973.4 (SEQ ID NO: 149360).

[00329] In various embodiments, the ATXN2 gene product is an ATXN2 mRNA transcript variant comprising NCBI Reference Sequence NR_132311.2 (SEQ ID NO: 149361). In various embodiments, the ATXN2 gene product comprises a sequence that shares at least 80%, at least

81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with an ATXN2 mRNA transcript variant, comprising NCBI Reference Sequence NR_132311.2 (SEQ ID NO: 149361).

SOD1

[00330] In some embodiments of the disclosure, the SOD1 gene product is a SOD1 mRNA or SOD1 pre-mRNA comprising sequences from a SOD1 gene sequence (for example the SOD1 gene sequence of NCBI Reference Sequence NG_008689.1 (SEQ ID NO: 167802), the SOD1 gene sequence of NCBI Reference Sequence NC_000021.9 (Reference GRCh38.p13 Primary Assembly) (SEQ ID NO: 167803), or a SOD1 coding sequence), or a portion thereof. In some embodiments of the disclosure, the SOD1 gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a SOD1 mRNA or SOD1 pre-mRNA sequence (for example the SOD1 gene sequence of NCBI Reference Sequence NG_008689.1 (SEQ ID NO: 167802), the SOD1 gene sequence of NCBI Reference Sequence NC_000021.9 (Reference GRCh38.p13 Primary Assembly) (SEQ ID NO: 167803), or a SOD1 coding sequence), or a portion thereof.

NCBI Reference Sequence NG_008689.1 (SEQ ID NO: 167802)

[00331] In various embodiments, the SOD1 gene product is a SOD1 mRNA sequence comprising NCBI Reference Sequence NM_000454.5 (SEQ ID NO: 167804). In various embodiments, the SOD1 gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a SOD1 mRNA sequence comprising NCBI Reference Sequence NM_000454.5 (SEQ ID NO: 167804).

MAPT

[00332] In some embodiments of the disclosure, the MAPT gene product is a MAPT mRNA or MAPT pre-mRNA comprising sequences from a MAPT gene sequence (for example the MAPT gene sequence of NCBI Reference Sequence NG_007398.2 (SEQ ID NO: 301567), the MAPT gene sequence of NCBI Reference Sequence NC_000017.11 (Reference GRCh38.p13 Primary Assembly) (SEQ ID NO: 301568), or a MAPT coding sequence), or a portion thereof. In some embodiments of the disclosure, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA or MAPT pre-mRNA sequence (for example the MAPT gene sequence of NCBI Reference Sequence NG_007398.2 (SEQ ID NO: 301567), the MAPT gene sequence of NCBI Reference Sequence NC_000017.11 (Reference GRCh38.p13 Primary Assembly) (SEQ ID NO: 301568), or a MAPT coding sequence), or a portion thereof.

NCBI Reference Sequence NM_001123066.4 (SEQ ID NO: 301569).

[00334] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001123067.4 (SEQ ID NO: 301570). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001123067.4 (SEQ ID NO: 301570).

[00335] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001203251.2 (SEQ ID NO: 301571). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001203251.2 (SEQ ID NO: 301571).

[00336] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001203252.2 (SEQ ID NO: 301572). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001203252.2 (SEQ ID NO: 301572).

[00337] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377265.1 (SEQ ID NO: 301573). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377265.1 (SEQ ID NO: 301573).

[00338] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377266.1 (SEQ ID NO: 301574). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at

least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377266.1 (SEQ ID NO: 301574).

[00339] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377267.1 (SEQ ID NO: 301575). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377267.1 (SEQ ID NO: 301575).

[00340] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377268.1 (SEQ ID NO: 301576). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_001377268.1 (SEQ ID NO: 301576).

[00341] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_005910.6 (SEQ ID NO: 301577). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_005910.6 (SEQ ID NO: 301577).

[00342] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_016834.5 (SEQ ID NO: 301578). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_016834.5 (SEQ ID NO: 301578).

[00343] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_016835.5 (SEQ ID NO: 301579). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%,

at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_016835.5 (SEQ ID NO: 301579).

[00344] In various embodiments, the MAPT gene product is a MAPT mRNA sequence comprising NCBI Reference Sequence NM_016841.5 (SEQ ID NO: 301580). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA sequence comprising NCBI Reference Sequence NM_016841.5 (SEQ ID NO: 301580).

[00345] In various embodiments, the MAPT gene product is a MAPT RNA sequence comprising NCBI Reference Sequence NR_165166.1 (SEQ ID NO: 301581). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT RNA sequence comprising NCBI Reference Sequence NR_165166.1 (SEQ ID NO: 301581).

[00346] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257370.4 (SEQ ID NO: 301582). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257370.4 (SEQ ID NO: 301582).

[00347] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257366.3 (SEQ ID NO: 301583). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257366.3 (SEQ ID NO: 301583).

[00348] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257362.4 (SEQ ID NO: 301584). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257362.4 (SEQ ID NO: 301584).

[00349] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257365.4 (SEQ ID NO: 301585). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257365.4 (SEQ ID NO: 301585).

[00350] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257367.4 (SEQ ID NO: 301586). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257367.4 (SEQ ID NO: 301586).

[00351] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257368.4 (SEQ ID NO: 301587). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257368.4 (SEQ ID NO: 301587).

[00352] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257369.4 (SEQ ID NO: 301588). In various

embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257369.4 (SEQ ID NO: 301588).

[00353] In various embodiments, the MAPT gene product is a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257371.4 (SEQ ID NO: 301589). In various embodiments, the MAPT gene product comprises a sequence that shares at least 80%, at least 81%, at least 82%, at least 83%, at least 84%, at least 85%, at least 86, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% identity with a MAPT mRNA transcript variant comprising NCBI Reference Sequence XM_005257371.4 (SEQ ID NO: 301589).

AONs Targeting Gene Product

PPM1A AONs

[00354] In various embodiments, a PPM1A AON disclosed herein, such as PPM1A AONs comprising a sequence of any one of SEQ ID NOs: 1-954, or a sequence of any one SEQ ID NOs: 1-954 in which one or more nucleosides are replaced with the one or more spacers, such as a sequence of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, target specific portions of a PPM1A gene product, such as a PPM1A mRNA or pre-mRNA transcript (*e.g.*, any one of SEQ ID NO: 1909-1913). In some embodiments, a PPM1A AON may be an oligonucleotide sequence at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913). In particular embodiments, a PPM1A AON may be an oligonucleotide sequence at least 85% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913). In particular embodiments, a PPM1A AON may be an oligonucleotide sequence at least 90% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913). In particular embodiments, a PPM1A AON may be an oligonucleotide sequence at least 95% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913). In particular

embodiments, a PPM1A AON may be an oligonucleotide sequence at least 98% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913). In particular embodiments, a PPM1A AON may be an oligonucleotide sequence at least 99% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913). In particular embodiments, a PPM1A AON may be an oligonucleotide sequence that is 100% complementary to a portion of a PPM1A gene product or to PPM1A gene sequence (*e.g.*, any one of SEQ ID NOs: 1909-1913).

[00355] In some embodiments described herein, a PPM1A AON targets a specific portion of a PPM1A gene product, such as a PPM1A mRNA transcript or a PPM1A pre-mRNA transcript. For example, as described herein, a PPM1A AON comprises a sequence that is at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or at least 100% complementary to a specific portion of a PPM1A gene product, for example, a PPM1A mRNA transcript or a PPM1A pre-mRNA transcript (*e.g.*, any one of SEQ ID NOs: 1909-1913).

[00356] In some embodiments, a PPM1A AON comprises a sequence that is at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or at least 100% complementary to a sequence of an untranslated region (UTR) of a PPM1A mRNA sequence, for example a 5' UTR or a 3' UTR of a PPM1A mRNA sequence. In some embodiments, a PPM1A AON comprises a sequence that is 100% complementary to a nucleotide sequence of an untranslated region (UTR) of a PPM1A mRNA sequence, for example a 5' UTR or a 3' UTR of a PPM1A mRNA sequence.

ATXN2 AONs

[00357] In various embodiments, a ATXN2 AON disclosed herein, such as ATXN2 AONs with a sequence of any one of SEQ ID NOs: 1914-149354 or a sequence of any one SEQ ID NOs: 1914-149354 in which one or more nucleosides are replaced with the one or more spacers, such as a sequence of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), target specific portions of a ATXN2 gene product, such as a ATXN2 mRNA transcript (*e.g.*, any one of SEQ ID NOs: 149355-149361). In some embodiments, a ATXN2 AON may be an oligonucleotide sequence at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% complementary to a portion of an ATXN2 gene

product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361). In particular embodiments, an ATXN2 AON may be an oligonucleotide sequence at least 85% complementary to a portion of an ATXN2 gene product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361). In particular embodiments, an ATXN2 AON may be an oligonucleotide sequence at least 90% complementary to a portion of an ATXN2 gene product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361). In particular embodiments, an ATXN2 AON may be an oligonucleotide sequence at least 95% complementary to a portion of an ATXN2 gene product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361). In particular embodiments, an ATXN2 AON may be an oligonucleotide sequence at least 98% complementary to a portion of an ATXN2 gene product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361). In particular embodiments, an ATXN2 AON may be an oligonucleotide sequence at least 99% complementary to a portion of an ATXN2 gene product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361). In particular embodiments, an ATXN2 AON may be an oligonucleotide sequence that is 100% complementary to a portion of an ATXN2 gene product or to ATXN2 gene sequence (*e.g.*, any one of SEQ ID NOs: 149355-149361).

[00358] In some embodiments described herein, an ATXN2 AON targets a specific portion of an ATXN2 gene product, such as an ATXN2 mRNA transcript or an ATXN2 pre-mRNA transcript. For example, as described herein, an ATXN2 AON comprises a sequence that is at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or at least 100% complementary to a specific portion of an ATXN2 gene product, for example, an ATXN2 mRNA transcript or an ATXN2 pre-mRNA transcript (*e.g.*, any one of SEQ ID NOs: 149355-149361).

SOD1 AONs

[00359] In various embodiments, a SOD1 AON disclosed herein, such as SOD1 AONs with a sequence of any one of 149362-158581, or SOD1 AONs with one or more spacers (e.g., a SOD1 AON with a sequence of any one SEQ ID NOs: 149362-158581 in which one or more nucleosides are replaced with the one or more spacers), such as a sequence of any one of SEQ ID NOs: 301610-301741), target specific portions of a SOD1 gene product, such as a SOD1 mRNA transcript (*e.g.*, any one of SEQ ID NOs: 167802-167804). In some embodiments, a SOD1 AON may be an oligonucleotide sequence at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least

96%, at least 97%, at least 98%, at least 99%, or 100% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804). In particular embodiments, a SOD1 AON may be an oligonucleotide sequence at least 85% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804). In particular embodiments, a SOD1 AON may be an oligonucleotide sequence at least 90% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804). In particular embodiments, a SOD1 AON may be an oligonucleotide sequence at least 95% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804). In particular embodiments, a SOD1 AON may be an oligonucleotide sequence at least 98% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804). In particular embodiments, a SOD1 AON may be an oligonucleotide sequence at least 99% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804). In particular embodiments, a SOD1 AON may be an oligonucleotide sequence that is 100% complementary to a portion of a SOD1 gene product or to SOD1 gene sequence (*e.g.*, any one of SEQ ID NOs: 167802-167804).

[00360] In some embodiments described herein, a SOD1 AON targets a specific portion of a SOD1 gene product, such as a SOD1 mRNA transcript or a SOD1 pre-mRNA transcript. For example, as described herein, a SOD1 AON comprises a sequence that is at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or at least 100% complementary to a specific portion of a SOD1 gene product, for example, a SOD1 mRNA transcript or a SOD1 pre-mRNA transcript (*e.g.*, any one of SEQ ID NOs: 167802-167804).

MAPT AONs

[00361] In various embodiments, a MAPT AON disclosed herein, such as MAPT AONs with a sequence of any one of SEQ ID NOs: 167805-301566, or MAPT AONs with one or more spacers (e.g., a MAPT AON with a sequence of any one SEQ ID NOs: 167805-301566 in which one or more nucleosides are replaced with the one or more spacers), such as a sequence of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C), target specific portions of a MAPT gene product, such as a MAPT mRNA or pre-mRNA transcript (*e.g.*, any one of SEQ ID NOs: 301567-301589). In some embodiments, a MAPT AON may be an oligonucleotide sequence at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least

91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of SEQ ID NOs: 301567-301589). In particular embodiments, a MAPT AON may be an oligonucleotide sequence at least 85% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of SEQ ID NOs: 301567-301589). In particular embodiments, a MAPT AON may be an oligonucleotide sequence at least 90% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of SEQ ID NOs: 301567-301589). In particular embodiments, a MAPT AON may be an oligonucleotide sequence at least 95% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of SEQ ID NOs: 301567-301589). In particular embodiments, a MAPT AON may be an oligonucleotide sequence at least 98% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of SEQ ID NOs: 301567-301589). In particular embodiments, a MAPT AON may be an oligonucleotide sequence at least 99% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of S SEQ ID NOs: 301567-301589). In particular embodiments, a MAPT AON may be an oligonucleotide sequence that is 100% complementary to a portion of a MAPT gene product or to MAPT gene sequence (*e.g.*, any one of SEQ ID NOs: 301567-301589).

[00362] In some embodiments described herein, a MAPT AON targets a specific portion of a MAPT gene product, such as a MAPT mRNA transcript or a MAPT pre-mRNA transcript. For example, as described herein, a MAPT AON comprises a sequence that is at least 85%, at least 86%, at least 87%, at least 88%, at least 89%, at least 90%, at least 91%, at least 92%, at least 93%, at least 94%, at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or at least 100% complementary to a specific portion of a MAPT gene product, for example, a MAPT mRNA transcript or a MAPT pre-mRNA transcript (*e.g.*, any one of SEQ ID NOs: 301567-301589).

Nuclease-Mediated Inhibition

[00363] In one aspect, the present disclosure provides a nuclease to reduce expression of target gene products (e.g., gene products of any one of PPM1A, ATXN2, SOD1, or MAPT). In some embodiments, the nuclease can be a RNAse (e.g., RNAseH), Zinc Finger nuclease (ZFN), a meganuclease, a transcription activator-like effector nuclease (TALEN), or a clustered regularly interspaced short palindromic repeats (CRISPR) associated protein.

[00364] In certain embodiments, target gene products are inhibited, eliminated, or reduced in quantity using zinc finger nucleases (ZFNs). Synthetic ZFNs are composed of a zinc finger binding domain fused with, *e.g.*, a FokI DNA cleavage domain. ZFNs can be

designed/engineered for editing the genome of a cell, including, but not limited to, knock-out or knock-in gene expression, in a wide range of organisms. A meganuclease, a TALEN, or a CRISPR associated protein can be used for genome engineering in cells of a patient suffering from or at risk of a neurological disease, including neurons, for example, motor neurons, and other cells of the nervous system. The described reagents can be used to target promoters, protein-encoding regions (exons), introns, 5′ and 3′ UTRs, and more.

[00365] CRISPR genome editing typically comprises two distinct components: (1) a guide RNA and (2) an endonuclease, specifically a CRISPR associated (Cas) nuclease (*e.g.*, Cas9). The guide RNA is a combination of the endogenous bacterial crRNA and tracrRNA into a single chimeric guide RNA (gRNA) transcript. Without being bound by theory, it is believed that when gRNA and the Cas are expressed in the cell, the genomic target sequence can be modified or permanently disrupted.

[00366] A gRNA/Cas complex can be recruited to a target sequence, for example, the target gene (e.g., any one of PPM1A, ATXN2, SOD1, or MAPT) by base-pairing between the gRNA sequence and the complement to the target DNA sequence in the target gene. An appropriate genomic target sequence contains a Protospacer Adjacent Motif (PAM) sequence immediately following the target sequence. The binding of the gRNA/Cas complex localizes the Cas to the target sequence, allowing wild-type Cas to cut both strands of DNA, causing a double strand break. The double strand break is repaired through one of two general repair pathways: (1) the non-homologous end joining DNA repair pathway or (2) the homology directed repair pathway. The non-homologous repair pathway can result in insertions/deletions at the double strand break that can lead to frameshifts and/or premature stop codons, effectively disrupting the open reading frame of the target gene. The homology directed repair pathway requires the presence of a repair template, which is used to fix the double strand break.

[00367] In certain embodiments, target gene expression is reduced using CRISPR genome editing. In some embodiments, a gRNA pair is used to target a target gene to reduce and/or eliminate expression of the target gene. In certain embodiments, one gRNA pair is used to reduce expression of the target gene. In certain other embodiments, multiple gRNA pairs are used to reduce expression of the target gene. gRNA pairs can be designed using known techniques and based on the gene sequence. In certain embodiments, gRNA sequences may include modifications such as 2' O-methyl analogs and 3' phosphorothioate internucleotide linkages in the terminal three nucleotides on both 5' and 3' ends of the gRNA.

Neurological Diseases

[00368] Methods described herein may be used to treat neurological diseases including, but not limited to, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism.

[00369] Motor neuron diseases are a group of diseases characterized by loss of function of motor neurons that coordinate voluntary movement of muscles by the brain. Motor neuron diseases may affect upper and/or lower motor neurons, and may have sporadic or familial origins. Motor neuron diseases include amyotrophic lateral sclerosis (ALS or Lou Gehrig's disease), progressive bulbar palsy, pseudobulbar palsy, progressive muscular atrophy, primary lateral sclerosis, spinal muscular atrophy, post-polio syndrome, and ALS with frontotemporal dementia.

[00370] Symptoms of motor neuron diseases include muscle decay or weakening, muscle pain, spasms, slurred speech, difficulty swallowing, loss of muscle control, joint pain, stiff limbs, difficulty breathing, drooling, and complete loss of muscle control, including over basic functions such as breathing, swallowing, eating, speaking, and limb movement. These symptoms are also sometimes accompanied by depression, loss of memory, difficulty with planning, language deficits, altered behavior, and difficulty assessing spatial relationships and/or changes in personality.

[00371] Motor neuron diseases can be assessed and diagnosed by a clinician of skill, for example, a neurologist, using various tools and tests. For example, the presence or risk of developing a motor neuron disease can be assessed or diagnosed using blood and urine tests (for example, tests that assay for the presence of creatinine kinase), magnetic resonance imaging (MRI), electromyography (EMG), nerve conduction study (NCS), spinal tap, lumbar puncture, and/or muscle biopsy. Motor neuron diseases can be diagnosed with the aid of a physical exam

and/or a neurological exam to assess motor and sensory skills, nerve function, hearing and speech, vision, coordination and balance, mental status, and changes in mood or behavior.

[00372] A patient suffering from ALS, FTD, ALS with FTD, or another neurological or motor neuron disease can be a patient that is diagnosed with the disease or that displays symptoms of the disease. A patient suffering from ALS, FTD, ALS with FTD, or another neurological or motor neuron disease can be a patient that previously suffered from the disease and, after recovering or experiencing complete or partial amelioration of the disease and/or disease symptoms, experiences a complete or partial relapse of the disease or disease symptoms. A patient suffering from ALS, FTD, ALS with FTD, or another neurological or motor neuron disease or condition can be a patient that harbors a genetic mutation associated with manifestation of the disease or condition. For example, a patient suffering from ALS can be a patient that harbors a genetic mutation in any of SOD1, C9orf72, Ataxin 2 (ATXN2), Charged Multivesicular Body Protein 2B (CHMP2B), Dynactin 1 (DCTN1), Human Epidermal Growth Factor Receptor 4 (ERBB4), FIG4 phosphoinositide 5-phosphatase (FIG4), NIMA related kinase 1 (NEK1), Heterogeneous nuclear ribonucleoprotein A1 (HNRNPA1), Neurofilament Heavy (NEFH), Peripherin (PRPH), TAR DNA binding protein 43 (TDP43 or TARDP), Fused in Sarcoma (FUS), Ubiquilin-2 (UBQLN2), Kinesin Family Member 5A (KIF5A), Valosin-Containing Protein (VCP), Alsin (ALS2), Senataxin (SETX), Sigma Non-Opioid Intracellular Receptor 1 (SIGMAR1), Survival of Motor Neuron 1 (SMN1), Spastic Paraplegia 11 (SPG11), Autosomal Recessive, Transient Receptor Potential Cation Channel Subfamily M Member 7 (TRPM7), Vesicle-Associated Membrane Protein-Associated Protein B/C (VAPB), Angiogenin (ANG), Profilin-1 (PFN1), Matrin-3 (MATR3), Coiled-coil-helix-coiled-coil-helix domain Containing 10 (CHCHD10), Tubulin, Alpha 4A (TUBA4A), TBK1, C21orf2, Sequestosome-1 (SQSTM1, also known as Ubiquitin-binding protein p62), and/or optineurin (OPTN), in particular, where the mutation is associated with ALS or a high risk of developing ALS.

[00373] A patient at risk of ALS, FTD, ALS with FTD, or another neurological or motor neuron disease can include those patients with a familial history of the disease or a genetic predisposition to the disease (*e.g.*, a patient that harbors a genetic mutation associated with high disease risk, for example), or patients exposed to environmental factors that increase disease risk. For example, a patient may be at risk of ALS if the patient harbors a mutation in any of SOD1, C9orf72, ATXN2, CHMP2B, DCTN1, ERBB4, FIG4, HNRNPA1, NEFH, PRPH, NEK1, TDP43, FUS, UBQLN2, KIF5A, VCP, ALS2, SETX, SIGMAR1, SMN1, SPG11, TRPM7, VAPB, ANG, PFN1, MATR3, CHCHD10, TUBA4A, TBK1, SQSTM1, C21orf2, and/or OPTN, in particular, where the mutation is associated with ALS or high risk of developing ALS. A patient at risk may also

include those patients diagnosed with a disease or condition that has a high comorbidity with ALS, FTD, ALS with FTD, or another neurological or motor neuron disease (for example, a patient suffering from dementia, which is significantly associated with higher odds of a family history of ALS, FTD, and of bulbar onset ALS (*see* Trojsi, F., *et al.* (2017) "Comorbidity of dementia with amyotrophic lateral sclerosis (ALS): insights from a large multicenter Italian cohort" *J Neurol* 264: 2224-31)).

Amyotrophic Lateral Sclerosis

[00374] ALS is a progressive motor neuron disease that disrupts signals to all voluntary muscles. ALS results in atrophy of both upper and lower motor neurons. Symptoms of ALS include weakening and wasting of the bulbar muscles, general and bilateral loss of strength, spasticity, muscle spasms, muscle cramps, fasciculations, slurred speech, and difficulty breathing or loss of ability to breathe. Some individuals with ALS also suffer from cognitive decline. At the molecular level, ALS is characterized by protein and RNA aggregates in the cytoplasm of motor neurons, including aggregates of the RNA-binding protein TDP43.

[00375] ALS is most common in males above 40 years of age, although it can also occur in women and children. Risk of ALS is also heightened in individuals who smoke, are exposed to chemicals such as lead, or who have served in the military. Most instances of ALS are sporadic, while only about 10% of cases are familial. Causes of ALS include sporadic or inherited genetic mutations, high levels of glutamate, protein mishandling. Genetic mutations associated with ALS include mutations in the genes SOD1, C9orf72, TARDP, FUS, ANG, ATXN2, CHCHD10, CHMP2B, DCTN1, ERBB4, FIG4, HNRPA1, MATR3, NEFH, OPTN, PFN1, PRPH, SETX, SIGMAR1, SMN1, SPG11, SQSTM1, TBK1, TRPM7, TUBA4A, UBQLN2, VAPB, and VCP.

Frontotemporal Dementia

[00376] Frontotemporal dementia (FTD) is a form of dementia that affects the frontal and temporal lobes of the brain. It has an earlier average age of onset than Alzheimer's disease – 40 years of age. Symptoms of FTD include extreme changes in behavior and personality, speech and language problems, and movement-related symptoms such as tremor, rigidity, muscle spasm, weakness, and difficulty swallowing. Subtypes of FTD include behavior variant frontotemporal dementia (bvFTD), characterized by changes in personality and behavior and primary progressive aphasia (PPA), which affects language skills, speaking, writing and comprehension. FTD is associated with tau protein accumulation (Pick bodies) and function of altered TDP43 function. About 30% of cases of FTD are familial, and no other risk factors other than family history of the

disease are known. Genetic mutations associated with FTD include mutations in the genes C9orf72, Progranulin (GRN), microtubule-associated protein tau (MAPT), UBQLN2, VPC, CHMP2B, TARDP, FUS, ITM2B, CHCHD10, SQSTM1, PSEN1, PSEN2, CTSF, CYP27A1, TBK1 and TBP.

[00377] Amyotrophic lateral sclerosis with frontotemporal dementia (ALS with FTD) is a clinical syndrome in which FTD and ALS occur in the same individual. Interestingly, mutations in C9orf72 are the most common cause of familial forms of ALS and FTD. Additionally, mutations in TBK1, VCP, SQSTMI, UBQLN2 and CHMP2B are also associated with ALS with FTD. Symptoms of ALS with FTD include dramatic changes in personality, as well as muscle weakness, muscle atrophy, fasciculations, spasticity, dysarthria, dysphagia, and degeneration of the spinal cord, motor neurons, and frontal and temporal lobes of the brain. At the molecular level, ALS with FTD is characterized by the accumulation of TDP-43 and/or FUS proteins. TBK1 mutations are associated with ALS, FTD, and ALS with FTD.

TBK1 and RIPK1 Function

[00378] In one aspect, methods described herein include exposing a cell to a PPM1A AON to modify the activity, function, or other characteristics of a gene or a gene product, for example, an mRNA or protein. For example, methods described herein include a method of increasing or decreasing or inhibiting the activity, function, or other characteristics of a gene or a gene product. For example, described herein is a method of increasing phosphorylation of a residue of TANK-binding kinase 1 (also known as Serine/threonine-protein kinase TBK1; "TBK1"). For example, described herein is a method of increasing TBK1 serine residue 172 (ser172) phosphorylation in a cell, where the method includes exposing the cell to a PPM1A AON. In some embodiments, TBK1 ser172 phosphorylation is increased in a cell of a patient suffering from ALS, FTD, or ALS with FTD. In some embodiments, the method of increasing TBK1 ser172 phosphorylation includes exposing a cell to a PPM1A antisense oligonucleotide of any one of SEQ ID NOs: 1-954, or a sequence of any one SEQ ID NOs: 1-954 in which one or more nucleosides are replaced with the one or more spacers, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00379] Also described herein is a method of increasing TBK1 function in a cell, where the method includes exposing the cell to a PPM1A AON. For example, described herein is a method of increasing TBK1 function in a cell, where the method includes exposing the cell to a PPM1A AON. In some embodiments, TBK1 function is increased in a cell of a patient suffering from ALS, FTD, or ALS with FTD. In some embodiments, the method of increasing TBK1 function includes exposing a cell to a PPM1A antisense oligonucleotide of any one of SEQ ID NOs: 1-954,

or a sequence of any one SEQ ID NOs: 1-954 in which one or more nucleosides are replaced with the one or more spacers, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00380] Tank-binding kinase 1 (TBK1) is an IKK family of kinases that induces type-1 interferon activity and plays a major role in the phosphorylation of autophagy adaptors. Mutations in TBK1 are thought to result in impaired autophagy and contribute to the accumulation of protein aggregates and ALS pathology. At least 92 mutations in TBK1 have been identified in patients with ALS, FTD, or ALS with FTD (*see* Oakes *et al.*, (2017) "TBK1: a new player in ALS linking autophagy and neuroinflammation" *Molecular Brain* 10:5, pg. 1-10). Furthermore, along with mutations in C9orf72, OPTN, SQSTM1/p62, UBQLN2, and TDP43, mutations in TBK1 account for approximately 15% of ALS and FTD patients. Furthermore, TBK1 haploinsufficiency associated with loss of function mutations has been identified as a major driver of familial ALS (*see* Freischmidt *et al.*, (2015) "Haploinsufficiency of TBK1 causes familial ALS and fronto-temporal dementia" *Nature Neuroscience*, 18(5):631-6).

[00381] Autophagy is a process by which proteins and damaged organelles are degraded and recycled. Abnormal protein aggregates are a hallmark of ALS pathology, and mutations in several genes involved in regulating autophagy are associated with ALS (for example, SQSTM1, SOD1, OPTN, VCP, UBQLN2, and TBK1). Thus, disruption of autophagy appears to contribute to ALS pathology.

[00382] Phosphorylation of residue Ser172 of TBK1 results in conformational changes in TBK1, that allow substrate binding by the protein's kinase domain. TBK1 phosphorylates a number of autophagy adaptors, and several TBK1 mutations identified in ALS patients inhibit the ability of TBK1 to phosphorylate these adaptors. Other TBK1 mutations result in decreased mRNA and protein levels. Additionally, individuals carrying mutations in TBK1 also display TDP43-positive aggregates in various brain regions. Thus, TBK1 mutations may result in decreased autophagy and accumulation of protein aggregates in motor neurons.

[00383] PPM1A is a member of the PP2C family of Ser/Thr protein phosphatases. PP2C family members are negative regulators of cellular stress-response pathways and are involved in regulating the cell-cycle and NF-κB pathways. PPM1A also dephosphorylates and inactivates TBK1. In particular, PPM1A dephosphorylates Ser172 of TBK1. Activated TBK1 can phosphorylate RIPK1 in such a manner that RIPK1 is deactivated. Thus PPM1A activity indirectly activates RIPK1, and therefore, reducing PPM1A expression indirectly inactivates RIPK1.

[00384] The present disclosure is based in part on the finding that increasing TBK1 activity, for example, increasing TBK1 activity in an individual or the cell of an individual who is suffering from TBK1 haploinsufficiency, can be used as a mechanism to treat neurological diseases, for example, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism.

[00385] The disclosure is also based in part on the finding that increasing TBK1 activity, for example, increasing residual TBK1 activity in an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency, can be achieved by increasing the amount of phosphorylated TBK1, for example, by increasing the amount of phosphorylated Ser172 TBK1, for example, an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency. The disclosure is also based in part on the finding that increasing TBK1 activity, for example, increasing residual TBK1 activity in an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency, can be achieved by increasing the ratio of phosphorylated TBK1 to total TBK1, for example, increasing the ratio of phosphorylated Ser172 TBK1 to unphosphorylated Ser172 TBK1, for example, in an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency.

[00386] The disclosure is further based in part on the finding that increasing TBK1 activity (for example, increasing residual TBK1 activity in an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency), increasing the amount of phosphorylated TBK1 (for example, increasing the amount of phosphorylated Ser172 TBK1, for example, in an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency), and/or increasing the ratio of phosphorylated TBK1 to unphosphorylated TBK1 (for example, increasing the ratio of

phosphorylated Ser172 TBK1 to unphosphorylated Ser172 TBK1, for example, in an individual and/or a cell of an individual suffering from TBK1 haploinsufficiency) can be achieved by inhibiting PPM1A activity and/or decreasing PPM1A protein levels, for example, in an individual and/or a cell of an individual suffering from a TBK1 haploinsufficiency. Without being bound by theory, it is believed that inhibiting PPM1A activity and/or decreasing PPM1A protein levels can be achieved by administering to a patient or a cell of a patient, a PPM1A AON, for example, a PPM1A AON described herein. In particular embodiments, the disclosure provides methods of inhibiting PPM1A activity and/or decreasing PPM1A protein amounts by administering to a patient or a cell of a patient (for example, a patient suffering from a neurological disease or a cell of a patient suffering from a neurological disease, for example, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism) a PPM1A AON, for example, a PPM1A AON comprising the nucleotide sequence of any one of SEQ ID NOs: 1-954, or a sequence of any one SEQ ID NOs: 1-954 in which one or more nucleosides are replaced with the one or more spacers, such as a sequence of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00387] Additionally disclosed herein is a method of modulating activity of Receptor Interacting Serine/Threonine Kinase 1 (also known as "RIPK1"). For example, described herein is a method of modulating RIPK1 activity in a cell, where the method includes exposing the cell to a PPM1A AON. In various embodiments, modulating activity of RIPK1 can be useful for treating various diseases, including acute neuronal injury, multiple sclerosis, ALS, Alzheimer's Disease, Lysosomal Storage Diseases, Parkinson's Disease, and other human central nervous system

diseases. In some embodiments, RIPK1 activity is modulated in a cell of a patient suffering from ALS, FTD, or ALS with FTD. In some embodiments, the method of modulating RIPK1 activity includes exposing a cell to a PPM1A antisense oligonucleotide of any one of SEQ ID NOs: 1-954, or a sequence of any one SEQ ID NOs: 1-954 in which one or more nucleosides are replaced with the one or more spacers, such as a sequence of any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00388] TBK1 regulates RIPK1 through direct phosphorylation on multiple sites including Thr189 to suppress RIPK1 kinase activity by blocking the interaction with its substrates. Degterev, A. et al. Targeting RIPK1 for the Treatment of Human Diseases, PNAS (2019), 116(20) 9714-9722. Therefore, increasing TBK1 function by increasing phosphorylation of a residue of TANK-binding kinase 1 can result in suppression of RIPK1 activity.

Methods of Treatment

[00389] The disclosure contemplates, in part, treating neurological diseases (for example, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism) in a patient in need thereof comprising administering a disclosed AON. In some embodiments, provided herein are methods for treatment of a neurological disease in a patient in need thereof, comprising administering a disclosed AON. In some embodiments of the disclosure, an effective amount of a disclosed AON may be administered to a patient in need thereof to treat a neurological disease, for example, to restore autophagy in cells of a patient suffering from a neurological disease, and/or to reduce or inhibit a target gene product. In some embodiments of the disclosure, an effective amount of a disclosed AON may be administered to a patient in need thereof to increase TBK1

phosphorylation (for example TBK1 ser172 phosphorylation) in a cell and/or to increase TBK1 function (for example, TBK1 kinase function) in a cell.

[00390] In some embodiments, methods of treating a neurological disease associated with impaired autophagy and/or protein aggregation (for example, TDP-43 protein aggregation, for example, in motor neurons) in a patient in need thereof are provided comprising administering a disclosed compound. In some embodiments, treating a neurological disease comprises at least ameliorating or reducing one symptom associated with the neurological disease (for example, reducing muscle weakness in a patient with ALS). Methods of treating a neurological disease (for example, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism) in a patient suffering therefrom are provided, that include administering a disclosed AON. In some embodiments, methods of slowing the progression of a neurological disease, for example, a motor neuron disease, are provided.

[00391] Provided herein are methods of treating, reducing the risk of developing, or delaying the onset of a neurological disease in a subject in need thereof comprising administering a disclosed AON. The methods include for example, treating a subject at risk of developing a neurological disease; *e.g.*, administering to the subject an effective amount of a disclosed AON. Neurological diseases that can be treated in this manner include amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease,

tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism.

[00392] Methods of preventing or treating neurological diseases (for example, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism) form part of this disclosure. Such methods may comprise administering to a patient in need thereof or a patient at risk, a pharmaceutical preparation comprising an AON disclosed herein. For example, a method of preventing or treating a neurological disease is provided comprising administering to a patient in need thereof an AON disclosed herein.

[00393] Patients treated using an above method may experience a reduction of at least about 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, or even 95% in the amount of a target gene product in a target cell (for example, a motor neuron) after administering an AON disclosed herein, after *e.g.* 1 day, 2 days, 1 week, 2 weeks, 3 weeks, 4 weeks, 5 weeks, 6 weeks, 7 weeks, 8 weeks, 1 month, 2 months, 3, months, 4 months, 5, months, or 6 months or more. Administering

such an AON may be on, *e.g.*, at least a daily basis. The AON may be administered orally. In some embodiments, the AON is administered intrathecally or intracisternally. For example, in an embodiment described herein, an AON is administered intrathecally or intracisternally about every 3 months. The delay or worsening of clinical manifestation of a neurological disease in a patient as a consequence of administering an AON disclosed here may be at least *e.g.*, 6 months, 1 year, 18 months or even 2 years or more as compared to a patient who is not administered an AON such as one disclosed herein.

[00394] In another aspect, the disclosure provides methods of preventing, ameliorating, and/or treating a neurological disease, for example, a motor neuron disease. For example described herein are methods of preventing, ameliorating, and/or treating ALS, FTD, and ALS with FTD. In some embodiments, the disclosure provides a method of treating a neurological disease in a patient, for example, a patient in need of treatment of a neurological disease, where the method comprises administering to the patient an AON. In some embodiments, the neurological disease is selected from the group consisting of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Limbic-predominant age-related TDP-43 encephalopathy (LATE)), Cerebral Age-Related TDP-43 With Sclerosis (CARTS), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and synaptic diseases like autism.

[00395] In some embodiments, the patient is a mammal, for example, a human, a primate, a dog, a cat, a horse, a cow, a goat, a sheep, a mouse, or a rat. In particular embodiments, the patient is a human patient, for example, a human patient in need of treatment of a neurological disease, for example, ALS, FTD, or ALS with FTD. In some embodiments, the patient is a patient at risk of developing a neurological disease, for example, ALS, FTD, or ALS with FTD. In some

embodiments, the patient is a patient suffering from a neurological disease, for example, ALS, FTD, or ALS with FTD. In some embodiments, the patient is a patient exhibiting symptoms associated with a neurological disease, for example, ALS, FTD, or ALS with FTD.

[00396] In another aspect, described herein are methods of modifying or restoring cellular function or activity, for example, cellular function or activity of a motor neuron. For example, described herein is a method of modifying or restoring cellular function or activity of a motor neuron of a patient at risk of or suffering from a neurological disease, for example, amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism. In some embodiments, the method includes exposing a cell to an AON. In some embodiments, the method includes exposing the cell to an AON *in vivo* or *ex vivo*.

[00397] In an embodiment described herein, the disclosure provides a method of increasing or restoring autophagy in a cell, where the method includes exposing the cell to an AON or contacting the cell with an AON. In some embodiments, the cell is a cell of a patient in need of treatment of a neurological disease. In some embodiments, the neurological disease is any one of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy,

amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism. In some embodiments, the exposing or contacting is performed *in vivo* or *ex vivo*. For example, in an embodiment described herein, a cell of a patient suffering from ALS, FTD, or ALS with FTD is exposed to or contacted with an AON, for example, an antisense oligonucleotide comprising any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00398] The AONs of the invention can be used alone or in combination with each other where by at least two AONs of the invention are used together in a single composition or as part of a treatment regimen. The AONs of the invention may also be used in combination with other drugs for treating neurological diseases or conditions.

[00399] In various embodiments, methods of treating a neurological disease comprises selecting a patient for treatment using an AON disclosed herein. Selecting a patient for treatment can include measuring the presence or level of expression of certain markers of neurological disease. Examples of markers include neurofilament light (NEFL), neurofilament heavy (NEFH), phosphorylated neurofilament heavy chain (pNFH), TDP-43, or $p75^{ECD}$. Such markers can be measured from the plasma, the spinal cord fluid, the cerebrospinal fluid, the extracellular vesicles (for example, CSF exosomes), the blood, the urine, the lymphatic fluid, fecal matter, or a tissue of the patient.

[00400] In particular embodiments, the patient for treatment is selected by measuring phosphorylated neurofilament heavy chain (pNFH) in cerebrospinal fluid (CSF). In particular embodiments, the the pNFH in the CSF of the patient is used to predict disease status and survival in C9ORF72-associated amyotrophic lateral sclerosis (c9ALS) patients after initial administration and/or during on-going treatment.

[00401] In some embodiments, selecting a patient for treatment can include determining whether the patient expresses a mutation of a disease-associated gene. For example, a disease-associated gene can be an ALS-associated gene selected from any of TBK1, TARDBP, SQSTM1, VCP,

C9orf72, FUS, and CHCHD10. For example, the patient can be identified as a candidate patient for treatment according to the determination that the patient includes one or more mutations in the disease-associated genes.

[00402] In various embodiments, a patient selected for treatment can be administered an AON disclosed herein and/or or a pharmaceutical composition thereof.

Treatment and Evaluation

[00403] In another aspect, the methods described herein include exposing a cell to an AON to inhibit or decrease activity or function of a gene or gene product, for example, an mRNA or protein. For example, described herein is a method of inhibiting expression, activity, and/or function of any of PPM1A, ATXN2, SOD1, or MAPT in a cell. In some embodiments, expression, activity, and/or function of a target is is inhibited in a cell of a patient suffering from ALS, FTD, or ALS with FTD. In some embodiments, the method of inhibiting a target includes exposing a cell to an AON of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00404] In methods described herein, exposing a cell to an AON can include administering the AON, or a pharmaceutical composition that includes the AON, to a patient, for example, a patient suffering from or at risk of developing a neurological disease such as amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism. Thus, embodiments described herein can include

administering an AON, or a pharmaceutical composition that includes an AON, to a patient in need of treatment, for example, a patient suffering from or at risk of developing a neurological disease such as amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism. Methods described herein embrace methods of administering an AON that allow administration of a therapeutically effective amount of the AON to a patient, for example, to a cell of a patient and/or to a site for treatment of a patient. For example, methods described herein include, but are not limited to, methods where an AON, or a pharmaceutical composition that includes an AON, is administered topically, parenterally, orally, buccally, sublingually, pulmonarily, intrathecally, intracisternally, intratracheally, intrathalamically, intracerebroventricularly, intraocularly, intranasally, transdermally, rectally, vaginally, or intraduodenally. In particular embodiments, the AON is administered orally. In some embodiments, the AON is administered intrathecally or intracisternally. In embodiments described herein, the methods include administering a therapeutically effective amount of an AON, for example, a therapeutically effective amount of an AON.

[00405] The methods described herein include methods of administering to a patient and/or exposing a cell to an AON, for example, an AON of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, or a pharmaceutically acceptable salt thereof.

[00406] In a further aspect, described herein is a use of an AON in the manufacture of a medicament for the treatment of neurological disease. For example, described herein is a use of an AON in the manufacture of a medicament for the treatment of ALS, FTD, or ALS with FTD. In some embodiments, the AON for use in the manufacture of a medicament for treatment is an AON of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, or a pharmaceutically acceptable salt thereof.

[00407] In a further aspect, described herein is a method of treating a neurological disease in a patient in need thereof, where the method includes administering to the patient in need thereof a pharmaceutical composition comprising a therapeutically effective amount of an AON, and a pharmaceutically acceptable excipient. In some embodiments, the neurological disease is amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism. In some embodiments, the AON includes any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, or a pharmaceutically acceptable salt thereof.

[00408] In embodiments described herein, the pharmaceutical composition comprising a therapeutically effective amount of an AON, and a pharmaceutically acceptable excipient can be

administered in any number of ways to achieve therapeutic delivery to a cell of a patient and/or to a site for treatment of a patient in need thereof. For example, in embodiments described herein, a pharmaceutical composition comprising a therapeutically effective amount of an AON, and a pharmaceutically acceptable excipient can be administered topically, parenterally, intrathecally, orally, pulmonarily, intratracheally, intranasally, transdermally, buccally, intrathalamically, intracerebroventricularly, intraocularly, sublingually, rectally, vaginally, or intraduodenally. In particular embodiments, the pharmaceutical composition is administered orally. In some embodiments, the pharmaceutical composition is administered intrathecally or intracisternally. In embodiments described herein, the patient is a mammal, for example, a human patient.

[00409] In some embodiments, an AON described herein is for use as a medicament. For example, described herein is AON of any one of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, or a pharmaceutically acceptable salt thereof, for use as a medicament.

[00410] In some embodiments, an AON disclosed herein, is for use in the treatment of a neurological disease. For example, described herein is an AON, or a pharmaceutically acceptable salt thereof, for use in the treatment of a neurological disease. In some embodiments, the neurological disease is selected from the group consisting of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Limbic-predominant age-related TDP-43 encephalopathy (LATE)), Cerebral Age-Related TDP-43 With Sclerosis (CARTS), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and synaptic diseases like autism.

[00411] A patient, as described herein, refers to any animal at risk for, suffering from or diagnosed with a neurological disease, including, but not limited to, mammals, primates, and humans. In certain embodiments, the patient may be a non-human mammal such as, for example, a cat, a dog, or a horse. A patient may be an individual diagnosed with a high risk of developing a neurological disease, someone who has been diagnosed with a neurological disease, someone who previously suffered from a neurological disease, or an individual evaluated for symptoms or indications of a neurological disease, or any of the signs or symptoms associated with neurological diseases such as amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism.

[00412] "A patient in need," as used herein, refers to a patient suffering from any of the symptoms or manifestations of a neurological disease, a patient who may suffer from any of the symptoms or manifestations of a neurological disease, or any patient who might benefit from a method of the disclosure for treating a neurological disease. A patient in need may include a patient who is diagnosed with a risk of developing a neurological disease, a patient who has suffered from a neurological disease in the past, or a patient who has previously been treated for a neurological disease.

[00413] "Effective amount," as used herein, refers to the amount of an agent that is sufficient to at least partially treat a condition when administered to a patient. The therapeutically effective amount will vary depending on the severity of the condition, the route of administration of the component, and the age, weight, etc. of the patient being treated. Accordingly, an effective amount of a disclosed AON is the amount of the AON necessary to treat a neurological disease in a patient such that administration of the agent prevents a neurological disease from occurring in a

subject, prevents neurological disease progression (*e.g.*, prevents the onset or increased severity of symptoms of the neurological disease such as muscle weakening, spasms, or fasciculation), or relieves or completely ameliorates all associated symptoms of a neurological disease, *e.g.*, causes regression of the disease.

[00414] Efficacy of treatment may be evaluated by means of evaluation of gross symptoms associated with a neurological disease, analysis of tissue histology, biochemical assay, imaging methods such as, for example, magnetic resonance imaging, or other known methods. For instance, efficacy of treatment may be evaluated by analyzing gross symptoms of the disease such as changes in muscle strength and control or other aspects of gross pathology associated with a neurological disease following administration of a disclosed AON to a patient suffering from a neurological disease.

[00415] Efficacy of treatment may also be evaluated at the tissue or cellular level, for example, by means of obtaining a tissue biopsy (*e.g.*, a brain, spinal, muscle, or motor neuron tissue biopsy) and evaluating gross tissue or cell morphology or staining properties, or by obtaining a biofluid (e.g., cerebrospinal fluid, exosomes, plasma, or urine) and examining target expression in the fluid using a biochemical assay that examines protein or RNA expression. Such biochemical assays can include ddPCR, qRT-PCR, western blot, ELISA, and/or SIMOA. For instance, one may evaluate levels of a protein (*e.g.*, e.g., protein levels of any of PPM1A, ATXN2, SOD1, or MAPT) indicative of a disease or a neurological disease, in dissociated cells or non-dissociated tissue via immunocytochemical, immunohistochemical, Western blotting, or Northern blotting methods, or methods useful for evaluating RNA levels such as quantitative or semi-quantitative polymerase chain (*e.g.*, digital PCR (DigitalPCR, dPCR, or ddPCR), qPCR etc.) reaction. One may also evaluate the presence or level of expression of useful biomarkers (*e.g.*, neurofilament light (NEFL), neurofilament heavy (NEFH), SOD1/SOD1 transcripts, TDP-43 or p75 extracellular domain ($p75^{ECD}$)) found in spinal cord fluid, cerebrospinal fluid, plasma, extracellular vesicles (for example, exosome-like cerebrospinal fluid extracellular vesicles ("CSF exosomes"), such as those described in Welton *et al.*, (2017) "Cerebrospinal fluid extracellular vesicle enrichment for protein biomarker discovery in neurological disease; multiple sclerosis" *J Extracell Vesicles.*, 6(1):1-10; and Street *et al.*, (2012) "Identification and proteomic profiling of exosomes in human cerebrospinal fluid" *J Transl. Med.*, 10:5), urine, fecal matter, lymphatic fluid, blood, plasma, or serum to evaluate disease state and efficacy of treatment. Additional measurements of efficacy may include strength duration time constant (SDTC), short interval cortical inhibition (SICI), dynamometry, accurate test of limb isometric strength (ATLIS), compound muscle action potential (CMAP), and ALSFRS-R. In certain embodiments, urinary

neurotrophin receptor p75 extracellular domain ($p75^{ECD}$) is a disease progression and prognostic biomarker in amyotrophic lateral sclerosis (ALS). Phosphorylated neurofilament heavy chain (pNFH) in cerebrospinal fluid (CSF) predict disease status and survival in amyotrophic lateral sclerosis (ALS) patients. CSF pNFH can serve as a prognostic biomarker for clinical trials, which will increase the likelihood of successfully developing a treatment for ALS. In various embodiments, efficacy may be determined via any of MRI, fMRI, PET, EEG, or EMG.

[00416] In some embodiments, in evaluating the efficacy of a treatment against Alzheimer's disease, mental performance can be used for measuring efficacy such as with the Mini-Mental State Examination (MMSE). For measuring efficacy, the Functional Assessment Staging Test (FAST), the Motor Screening Task, Paired Associates Learning, Spatial Working Memory, Reaction time, Rapid Visual Information Processing, Delayed Matching to Sample, Pattern Recognition Memory can be used.

[00417] In some embodiments, in evaluating the efficacy of a treatment against Parkinson's disease, the Unified Parkinson's Disease Rating Scale (UPDRS) can be implemented as the performance measure. Other measures for quantifying aspects of functional performance not measured by the UPDRS can include the Berg Balance Scale (BBS), Forward Functional Reach Test (FFR), Backward Functional Reach Test (BFR), Timed "Up & Go" Test (TUG), and gait speed.

[00418] In evaluating efficacy of treatment, suitable controls may be chosen to ensure a valid assessment. For instance, one can compare symptoms evaluated in a patient with a neurological disease following administration of a disclosed AON to those symptoms in the same patient prior to treatment or at an earlier point in the course of treatment or in another patient not diagnosed with the neurological disease. Alternatively, one may compare the results of biochemical or histological analysis of tissue following administration of a disclosed AON with those of tissue from the same patient or from an individual not diagnosed with the neurological disease or from the same patient prior to administration of the AON. Additionally, one may compare blood, plasma, serum, cell, urine, lymphatic fluid, spinal cord fluid, cerebrospinal fluid, or fecal samples following administration of the AON with comparable samples from an individual not diagnosed with the neurological disease or from the same patient prior to administration of the AON. In some embodiments one may compare extracellular vesicles (for example CSF exosomes), following administration of the AON with extracellular vesicles from an individual not diagnosed with the neurological disease or from the same patient prior to administration of the AON.

[00419] Validation of target inhibition may be determined by direct or indirect assessment of target expression levels or activity. For instance, biochemical assays that measure any of PPM1A,

ATXN2, SOD1, or MAPT protein or RNA expression may be used to evaluate overall inhibition. For instance, one may measure target protein levels in cells or tissue by Western blot to evaluate overall levels. One may also measure target mRNA levels by means of Northern blot or quantitative polymerase chain reaction to determine overall target inhibition. One may also evaluate target protein levels or levels of another protein indicative of the target signaling activity in dissociated cells, non-dissociated tissue, extracellular vesicles (for example, CSF exosomes), blood, serum, or fecal matter via immunocytochemical or immunohistochemical methods.

[00420] Methods of treatment disclosed herein include methods of increasing or restoring autophagy in a cell. "Autophagy" refers to the natural, regulated mechanism of the cell that disassembles unnecessary or dysfunctional components, allowing orderly degradation and recycling of cellular components. Autophagy is generally responsible for degrading relatively long-lived, cytoplasmic proteins, soluble and insoluble misfolded proteins, and also entire organelles. Failure in autophagy machinery is thought to contribute to the formation of toxic protein aggregates in motor neurons (*See* Ramesh and Pandley, (2017) "Autophagy Dysregulation in ALS: When Protein Aggregates Get Out of Hand" *Front Mol Neurosci*. 10 (Article 263)). Dysregulation of autophagy and protein aggregation and mislocalization is implicated in neurological diseases, including ALS. Methods of increasing or restoring autophagy include methods that reduce expression levels of targets in a patient suffering from a neurological disease. Methods of increasing or restoring autophagy also include methods that increase TBK1 activity or expression or TBK1 phosphorylation (for example, TBK1 ser172 phosphorylation) in cells of a patient suffering from a neurological disease.

[00421] The disclosure also provides methods of inhibiting target gene products (e.g., PPM1A, ATXN2, SOD1, or MAPT) in cells of a patient suffering from a neurological disease. Target gene products may be inhibited in any cell in which the target expression or activity occurs, including cells of the nervous system (including the central nervous system, the peripheral nervous system, motor neurons, the brain, the brain stem, the frontal lobes, the temporal lobes, the spinal cord), the musculoskeletal system, spinal fluid, and cerebrospinal fluid. Cells of the musculoskeletal system include skeletal muscle cells (*e.g.*, myocytes). Motor neurons include upper motor neurons and lower motor neurons.

Pharmaceutical Compositions and Routes of Administration

[00422] The present disclosure also provides methods for treating a neurological disease via administration of a pharmaceutical composition comprising a disclosed AON. In another aspect, the disclosure provides a pharmaceutical composition for use in treating a neurological disease. The pharmaceutical composition may be comprised of a disclosed antisense oligonucleotide and a

pharmaceutically acceptable carrier. As used herein the term "pharmaceutical composition" means, for example, a mixture containing a specified amount of a therapeutic compound, *e.g.*, a therapeutically effective amount, of a therapeutic compound in a pharmaceutically acceptable carrier to be administered to a mammal, *e.g.*, a human, in order to treat a neurological disease. In some embodiments, contemplated herein are pharmaceutical compositions comprising a disclosed AON and a pharmaceutically acceptable carrier. In another aspect, the disclosure provides use of a disclosed AON in the manufacture of a medicament for treating a neurological disease. "Medicament," as used herein, has essentially the same meaning as the term "pharmaceutical composition."

[00423] As used herein, "pharmaceutically acceptable carrier" means buffers, carriers, and excipients suitable for use in contact with the tissues of human beings and animals without excessive toxicity, irritation, allergic response, or other problem or complication, commensurate with a reasonable benefit/risk ratio. The carrier(s) should be "acceptable" in the sense of being compatible with the other ingredients of the formulations and not deleterious to the recipient. Pharmaceutically acceptable carriers include buffers, solvents, dispersion media, coatings, isotonic and absorption delaying agents, and the like, that are compatible with pharmaceutical administration. The use of such media and agents for pharmaceutically active substances is known in the art. In one embodiment the pharmaceutical composition is administered orally and includes an enteric coating suitable for regulating the site of absorption of the encapsulated substances within the digestive system or gut. For example, an enteric coating can include an ethylacrylate-methacrylic acid copolymer.

[00424] In some embodiments, an AON of the disclosure, is in the form of a pharmaceutically acceptable salt. AONs described herein that are acidic in nature are capable of forming base salts with various pharmacologically acceptable cations. Examples of such salts include alkali metal or alkaline earth metal salts and, particularly, calcium, magnesium, sodium, lithium, zinc, potassium, and iron salts. Pharmaceutically acceptable salts of the disclosure include, for example, pharmaceutically acceptable salts of an AON of any of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C.

[00425] Also described herein are pharmaceutical compositions comprising an AON and a pharmaceutically acceptable excipient. For example, a pharmaceutical composition described herein can include an AON, for example, an AON of any one of SEQ ID NOs: 1-954, 1914-

149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, and a pharmaceutically acceptable excipient.

[00426] In some embodiments, an AON can be encapsulated in a nanoparticle coating. It is believed that nanoparticle encapsulation prevents AON degradation and enhances cellular uptake. For example, in some embodiments an AON is encapsulated in a coating of a cationic polymer, for example, a synthetic polymer (*e.g.*, poly-L-lysine, polyamidoamine, a poly(β-amino ester), and polyethyleneimine) or a naturally occurring polymer (*e.g.*, chitosan and a protamine). In some embodiments, an AON is encapsulated in a lipid or lipid-like material, for example, a cationic lipid, a cationic lipid-like material, or an ionizable lipid that is positively charged only at an acidic pH. For example, in some embodiments, an AON is encapsulated in a lipid nanoparticle that includes hydrophobic moieties, *e.g.*, cholesterol and/or a polyethylene glycol (PEG) lipid.

[00427] In some embodiments, an AON is conjugated to a bioactive ligand. For example, in some embodiments described herein, an AON is conjugated to a peptide, a lipid, N-acetylgalactosamine (GalNAc), cholesterol, vitamin E, an antibody, or a cell-penetrating peptide (for example, transactivator of transcription (TAT) and penetratine).

[00428] Pharmaceutical compositions containing a disclosed AON, such as those disclosed herein, can be presented in a dosage unit form and can be prepared by any suitable method. A pharmaceutical composition should be formulated to be compatible with its intended route of administration. Useful formulations can be prepared by methods well known in the pharmaceutical art. For example, see *Remington's Pharmaceutical Sciences*, 18th ed. (Mack Publishing Company, 1990).

[00429] Pharmaceutical formulations, for example, are sterile. Sterilization can be accomplished, for example, by filtration through sterile filtration membranes. Where the composition is lyophilized, filter sterilization can be conducted prior to or following lyophilization and reconstitution.

[00430] In one embodiment, a disclosed AON and any pharmaceutical composition thereof may be administered by one or several routes, including topically, parenterally, intrathecally, orally, pulmonarily, intratracheally, intranasally, transdermally, buccally, intrathalamically, intracerebroventricularly, intraocularly, sublingually, rectally, vaginally, or intraduodenally. The term parenteral as used herein includes subcutaneous injections, intrapancreatic administration, intravenous, intracisternal, intrathecal, intramuscular, intraperitoneal, intrasternal injection or infusion techniques. For example, a disclosed AON may be administered subcutaneously to a

subject. In another example, a disclosed AON may be administered orally to a subject. In another example, a disclosed AON may be administered directly to the nervous system, or specific regions or cells of the nervous system (*e.g.*, the brain, brain stem, lower motor neurons, spinal cord, upper motor neurons) via parenteral administration, for example, a disclosed AON may be administered intrathecally or intracisternally.

[00431] It will be appreciated that the AON administered to the patient having or at risk of a neurological disease in methods described herein, can be administered by various administration routes. In various embodiments, the AON can be administered by one or several routes, including orally (*e.g.*, by inhalation spray), topically, vaginally, rectally, intrathecally, intratracheally, intracisternally, intranasally, transdermally, intrathalamically, intracerebroventricularly, intraocularly, intraduodenally, buccally, sublingually, parenterally, *e.g.*, by subcutaneous injection. The term parenteral as used herein includes subcutaneous injections, intrapancreatic administration, and intravenous, intrathecal, intracisternal, intramuscular, intraperitoneal, and intrasternal injection or infusion techniques.

Parenteral Administration

[00432] The pharmaceutical compositions of the disclosure can be formulated for parenteral administration, *e.g.*, formulated for injection via the intravenous, intracisternal, intramuscular, subcutaneous, intrathecal, intralesional, or intraperitoneal routes. The preparation of an aqueous composition, such as an aqueous pharmaceutical composition containing a disclosed AON, will be known to those of skill in the art in light of the present disclosure. Typically, such compositions can be prepared as injectables, either as liquid solutions or suspensions; solid forms suitable for using to prepare solutions or suspensions upon the addition of a liquid prior to injection can also be prepared; and the preparations can also be emulsified.

[00433] The pharmaceutical forms suitable for injectable use include sterile aqueous solutions or dispersions; formulations including sesame oil, peanut oil or aqueous propylene glycol; and sterile powders for the extemporaneous preparation of sterile injectable solutions or dispersions. In all cases the form must be sterile and must be fluid to the extent that easy syringability exists. It must be stable under the conditions of manufacture and storage and must be preserved against the contaminating action of microorganisms, such as bacteria and fungi.

[00434] Solutions of active compounds as free base or pharmacologically acceptable salts can be prepared in water suitably mixed with a surfactant, such as hydroxypropylcellulose. Dispersions can also be prepared in glycerol, liquid polyethylene glycols, and mixtures thereof and in oils. In addition, sterile, fixed oils may be employed as a solvent or suspending medium. For this purpose any bland fixed oil can be employed including synthetic mono- or diglycerides. In addition, fatty

acids such as oleic acid can be used in the preparation of injectables. The sterile injectable preparation may also be a sterile injectable solution, suspension, or emulsion in a nontoxic parenterally acceptable diluent or solvent, for example, as a solution in 1,3-butanediol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution, U.S.P., and isotonic sodium chloride solution. In one embodiment, a disclosed AON may be suspended in a carrier fluid comprising 1% (w/v) sodium carboxymethylcellulose and 0.1% (v/v) TWEEN™ 80. Under ordinary conditions of storage and use, these preparations contain a preservative to prevent the growth of microorganisms.

[00435] Injectable preparations, for example, sterile injectable aqueous or oleaginous suspensions may be formulated according to the known art using suitable dispersing or wetting agents and suspending agents. Generally, dispersions are prepared by incorporating the various sterilized active ingredients into a sterile vehicle which contains the basic dispersion medium and the required other ingredients from those enumerated above. Sterile injectable solutions of the disclosure may be prepared by incorporating a disclosed AON in the required amount of the appropriate solvent with various of the other ingredients enumerated above, as required, followed by filtered sterilization. In the case of sterile powders for the preparation of sterile injectable solutions, the preferred methods of preparation are vacuum-drying and freeze-drying techniques which yield a powder of the active ingredient plus any additional desired ingredient from a previously sterile-filtered solution thereof. The injectable formulations can be sterilized, for example, by filtration through a bacteria-retaining filter.

[00436] The preparation of more, or highly concentrated solutions for intramuscular injection is also contemplated. In this regard, the use of DMSO as solvent is preferred as this will result in extremely rapid penetration, delivering high concentrations of the disclosed AON to a small area.

[00437] Suitable preservatives for use in such a solution include benzalkonium chloride, benzethonium chloride, chlorobutanol, thimerosal and the like. Suitable buffers include boric acid, sodium and potassium bicarbonate, sodium and potassium borates, sodium and potassium carbonate, sodium acetate, sodium biphosphate and the like, in amounts sufficient to maintain the pH at between about pH 6 and pH 8, and for example, between about pH 7 and pH 7.5. Suitable tonicity agents are dextran 40, dextran 70, dextrose, glycerin, potassium chloride, propylene glycol, sodium chloride, and the like, such that the sodium chloride equivalent of the solution is in the range 0.9 plus or minus 0.2%. Suitable antioxidants and stabilizers include sodium bisulfite, sodium metabisulfite, sodium thiosulfite, thiourea and the like. Suitable wetting and clarifying agents include polysorbate 80, polysorbate 20, poloxamer 282 and tyloxapol. Suitable viscosity-increasing agents include dextran 40, dextran 70, gelatin, glycerin, hydroxyethylcellulose,

hydroxymethylpropylcellulose, lanolin, methylcellulose, petrolatum, polyethylene glycol, polyvinyl alcohol, polyvinylpyrrolidone, carboxymethylcellulose and the like.

Intrathecal Administration

[00438] In some embodiments, an AON, or a pharmaceutical composition of the disclosure that includes an AON, is delivered to the CNS through intrathecal administration, thereby ensuring delivery into the cerebrospinal fluid (CSF) of a patient in need of treatment. In various embodiments, intrathecal administration (also referred to as intrathecal injection) refers to an injection into the spinal canal (intrathecal space surrounding the spinal cord). Various techniques may be used including, without limitation, lateral cerebroventricular injection through a burrhole or cisternal or lumbar puncture or the like. In some embodiments, "intrathecal administration" or "intrathecal delivery" according to the present invention refers to IT administration or delivery via the lumbar area or region, *e.g.*, lumbar IT administration or delivery. As used herein, the term "lumbar region" or "lumbar area" refers to the area between the third and fourth lumbar (lower back) vertebrae and, more inclusively, the L2-S1 region of the spine.

[00439] In various embodiments, compositions comprising a disclosed AON can be suitable for intrathecal delivery. For example, a composition suitable for intrathecal delivery can comprise the AON and any of cerebrospinal fluid, artificial cerebrospinal fluid, phosphate buffered saline (PBS), salt buffer, Ringer's solution, and Lactated Ringer's solution.

Oral Administration

[00440] In some embodiments, contemplated herein are compositions suitable for oral delivery of a disclosed AON, *e.g.*, tablets that include an enteric coating, *e.g.*, a gastro-resistant coating, such that the compositions may deliver an AON to, *e.g.*, the gastrointestinal tract of a patient.

[00441] For example, a tablet for oral administration is provided that comprises granules (*e.g.*, is at least partially formed from granules) that include a disclosed AON , *e.g.*, an AON of any of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, and pharmaceutically acceptable excipients. Such a tablet may be coated with an enteric coating. Contemplated tablets may include pharmaceutically acceptable excipients such as fillers, binders, disintegrants, and/or lubricants, as well as coloring agents, release agents, coating agents, sweetening, flavoring such as wintergreen, orange, xylitol, sorbitol, fructose, and maltodextrin, and perfuming agents, preservatives and/or antioxidants.

[00442] In some embodiments, contemplated pharmaceutical formulations include an intra-granular phase that includes a disclosed AON, *e.g.* an AON of any of SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566 or an AON with one or more spacers that replace one or more nucleosides of a sequence of any one SEQ ID NOs: 1-954, 1914-149354, 149362-158581, or 167805-301566, such as any one of SEQ ID NOs: 301692-301742 or the sequences in Tables 4A-4C, and a pharmaceutically acceptable salt (*e.g.*, a pharmaceutically acceptable filler). For example, a disclosed AON and a filler may be blended together, optionally, with other excipients, and formed into granules. In some embodiments, the intragranular phase may be formed using wet granulation, *e.g.* a liquid (*e.g.*, water) is added to the blended AON compound and filler, and then the combination is dried, milled and/or sieved to produce granules. One of skill in the art would understand that other processes may be used to achieve an intragranular phase.

[00443] In some embodiments, contemplated formulations include an extra-granular phase, which may include one or more pharmaceutically acceptable excipients, and which may be blended with the intragranular phase to form a disclosed formulation.

[00444] A disclosed formulation may include an intragranular phase that includes a filler. Exemplary fillers include, but are not limited to, cellulose, gelatin, calcium phosphate, lactose, sucrose, glucose, mannitol, sorbitol, microcrystalline cellulose, pectin, polyacrylates, dextrose, cellulose acetate, hydroxypropylmethyl cellulose, partially pre-gelatinized starch, calcium carbonate, and others including combinations thereof.

[00445] In some embodiments, a disclosed formulation may include an intragranular phase and/or an extragranular phase that includes a binder, which may generally function to hold the ingredients of the pharmaceutical formulation together. Exemplary binders of the disclosure may include, but are not limited to, the following: starches, sugars, cellulose or modified cellulose such as hydroxypropyl cellulose, lactose, pre-gelatinized maize starch, polyvinyl pyrrolidone, hydroxypropyl cellulose, hydroxypropylmethyl cellulose, low substituted hydroxypropyl cellulose, sodium carboxymethyl cellulose, methyl cellulose, ethyl cellulose, sugar alcohols and others including combinations thereof.

[00446] Contemplated formulations, *e.g.*, that include an intragranular phase and/or an extragranular phase, may include a disintegrant such as but are not limited to, starch, cellulose, crosslinked polyvinyl pyrrolidone, sodium starch glycolate, sodium carboxymethyl cellulose, alginates, corn starch, crosmellose sodium, crosslinked carboxymethyl cellulose, low substituted hydroxypropyl cellulose, acacia, and others including combinations thereof. For example, an intragranular phase and/or an extragranular phase may include a disintegrant.

[00447] In some embodiments, a contemplated formulation includes an intra-granular phase comprising a disclosed AON and excipients chosen from: mannitol, microcrystalline cellulose, hydroxypropylmethyl cellulose, and sodium starch glycolate or combinations thereof, and an extra-granular phase comprising one or more of: microcrystalline cellulose, sodium starch glycolate, and magnesium stearate or mixtures thereof.

[00448] In some embodiments, a contemplated formulation may include a lubricant, *e.g.* an extra-granular phase may contain a lubricant. Lubricants include but are not limited to talc, silica, fats, stearin, magnesium stearate, calcium phosphate, silicone dioxide, calcium silicate, calcium phosphate, colloidal silicon dioxide, metallic stearates, hydrogenated vegetable oil, corn starch, sodium benzoate, polyethylene glycols, sodium acetate, calcium stearate, sodium lauryl sulfate, sodium chloride, magnesium lauryl sulfate, talc, and stearic acid.

[00449] In some embodiments, the pharmaceutical formulation comprises an enteric coating. Generally, enteric coatings create a barrier for the oral medication that controls the location at which the drug is absorbed along the digestive track. Enteric coatings may include a polymer that disintegrates at different rates according to pH. Enteric coatings may include for example, cellulose acetate phthalate, methyl acrylate-methacrylic acid copolymers, cellulose acetate succinate, hydroxylpropylmethyl cellulose phthalate, methyl methacrylate-methacrylic acid copolymers, ethylacrylate-methacrylic acid copolymers, methacrylic acid copolymer type C, polyvinyl acetate-phthalate, and cellulose acetate phthalate.

[00450] Exemplary enteric coatings include Opadry® AMB, Acryl-EZE®, Eudragit® grades. In some embodiments, an enteric coating may comprise about 5% to about 10%, about 5% to about 20%, 8 to about 15%, about 8% to about 20%, about 10% to about 20%, or about 12 to about 20%, or about 18% of a contemplated tablet by weight. For example, enteric coatings may include an ethylacrylate-methacrylic acid copolymer.

[00451] For example, in a contemplated embodiment, a tablet is provided that comprises or consists essentially of about 0.5% to about 70%, *e.g.* about 0.5% to about 10%, or about 1% to about 20%, by weight of a disclosed AON or a pharmaceutically acceptable salt thereof. Such a tablet may include for example, about 0.5% to about 60% by weight of mannitol, *e.g.* about 30% to about 50% by weight mannitol, *e.g.* about 40% by weight mannitol; and/or about 20% to about 40% by weight of microcrystalline cellulose, or about 10% to about 30% by weight of microcrystalline cellulose. For example, a disclosed tablet may comprise an intragranular phase that includes about 30% to about 60%, *e.g.* about 45% to about 65% by weight, or alternatively, about 5 to about 10% by weight of a disclosed AON, about 30% to about 50%, or alternatively, about 5% to about 15% by weight mannitol, about 5% to about 15% microcrystalline cellulose,

about 0% to about 4%, or about 1% to about 7% hydroxypropylmethylcellulose, and about 0% to about 4%, *e.g.* about 2% to about 4% sodium starch glycolate by weight.

[00452] In another contemplated embodiment, a pharmaceutical tablet formulation for oral administration of a disclosed AON comprises an intra-granular phase, wherein the intra-granular phase includes a disclosed AON or a pharmaceutically acceptable salt thereof (such as a sodium salt), and a pharmaceutically acceptable filler, and which may also include an extra-granular phase, that may include a pharmaceutically acceptable excipient such as a disintegrant. The extra-granular phase may include components chosen from microcrystalline cellulose, magnesium stearate, and mixtures thereof. The pharmaceutical composition may also include an enteric coating of about 12% to 20% by weight of the tablet. For example, a pharmaceutically acceptable tablet for oral use may comprise about 0.5% to 10% by weight of a disclosed AON, *e.g.*, a disclosed AON or a pharmaceutically acceptable salt thereof, about 30% to 50% by weight mannitol, about 10% to 30% by weight microcrystalline cellulose, and an enteric coating comprising an ethylacrylate-methacrylic acid copolymer.

[00453] In another example, a pharmaceutically acceptable tablet for oral use may comprise an intra-granular phase, comprising about 5 to about 10% by weight of a disclosed AON, *e.g.*, a disclosed AON or a pharmaceutically acceptable salt thereof, about 40% by weight mannitol, about 8% by weight microcrystalline cellulose, about 5% by weight hydroxypropylmethyl cellulose, and about 2% by weight sodium starch glycolate; an extra-granular phase comprising about 17% by weight microcrystalline cellulose, about 2% by weight sodium starch glycolate, about 0.4% by weight magnesium stearate; and an enteric coating over the tablet comprising an ethylacrylate-methacrylic acid copolymer.

[00454] In some embodiments the pharmaceutical composition may contain an enteric coating comprising about 13% or about 15%, 16%, 17% or 18% by weight, *e.g.*, AcyrlEZE® (see, *e.g.*, PCT Publication No. WO 2010/054826, which is hereby incorporated by reference in its entirety).

[00455] The rate at which the coating dissolves and the active ingredient is released is its dissolution rate. In an embodiment, a contemplated tablet may have a dissolution profile, *e.g.* when tested in a USP/EP Type 2 apparatus (paddle) at 100 rpm and 37 °C in a phosphate buffer with a pH of 7.2, of about 50% to about 100% of the AON releasing after about 120 minutes to about 240 minutes, for example after 180 minutes. In another embodiment, a contemplated tablet may have a dissolution profile, *e.g.* when tested in a USP/EP Type 2 apparatus (paddle) at 100 rpm and 37°C in diluted HCl with a pH of 1.0, where substantially none of the AON is released after 120 minutes. A contemplated tablet, in another embodiment, may have a dissolution profile, *e.g.* when tested in USP/EP Type 2 apparatus (paddle) at 100 rpm and 37 °C in a phosphate buffer

with a pH of 6.6, of about 10% to about 30%, or not more than about 50%, of the AON releasing after 30 minutes.

[00456] In some embodiments, methods provided herein may further include administering at least one other agent that is directed to treatment of diseases and disorders disclosed herein. In one embodiment, contemplated other agents may be co-administered (*e.g.*, sequentially or simultaneously).

Dosage and Frequency of Administration

[00457] Exemplary formulations include dosage forms that include or consist essentially of about 35 mg to about 500 mg of a disclosed AON, such as any of a PPM1A AON, ATXN2 AON, SOD1 AON, or MAPT AON. For example, formulations that include about 35 mg, 40 mg, 50 mg, 60 mg, 70 mg, 80 mg, 90 mg, 100 mg, 110 mg, 120 mg, 130 mg, 140 mg, 150 mg, 160 mg, 170 mg, 180 mg, 190 mg, 200 mg, 250 mg, 300 mg, 350 mg, 400 mg, 450 mg, 500 mg, 600 mg, 700 mg, 800 mg, 900 mg, 1 g, 1.5 g, 2.0 g, 2.5 g, 3.0 g, 3.5 g, 4.0 g, 4.5 g, or 5.0 g of a disclosed AON are contemplated herein. In one embodiment, a formulation may include about 40 mg, 80 mg, or 160 mg of a disclosed AON. In some embodiments, a formulation may include at least 100 µg of a disclosed AON. For example, formulations may include about 0.1 mg, 0.2 mg, 0.3 mg, 0.4 mg, 0.5 mg, 1 mg, 5 mg, 10 mg, 15 mg, 20 mg, 25 mg, or 30 mg of a disclosed AON.

[00458] In some embodiments, methods described herein include administering at least 1 µg, at least 5 µg, at least 10 µg, at least 20 µg, at least 30 µg, at least 40 µg, at least 50 µg, at least 60 µg, at least 70 µg, at least 80 µg, at least 90 µg, or at least 100 µg of an AON. In some embodiments, methods of the invention include administering from 35 mg to 500 mg, from 1 mg to 10 mg, from 10 mg to 20 mg, from 20 mg to 30 mg, from 30 mg to 40 mg, from 40 mg to 50 mg, from 50 mg to 60 mg, from 60 mg to 70 mg, from 70 mg to 80 mg, from 80 mg to 90 mg, from 90 mg to 100 mg, from 100 mg to 150 mg, from 150 mg to 200 mg, from 200 mg to 250 mg, from 250 mg to 300 mg, from 300 mg to 350 mg, from 350 mg to 400 mg, from 400 mg to 450 mg, from 450 mg to 500 mg, from 500 mg to 600 mg, from 600 mg to 700 mg, from 700 mg to 800 mg, from 800 mg to 900 mg, from 900 mg to 1 g, from 1 mg to 50 mg, from 20 mg to 40 mg, or from 1 mg to 500 mg of a AON.

[00459] The amount administered will depend on variables such as the type and extent of disease or indication to be treated, the overall health and size of the patient, the *in vivo* potency of the AON, the pharmaceutical formulation, and the route of administration. The initial dosage can be increased beyond the upper level in order to rapidly achieve the desired blood-level or tissue level. Alternatively, the initial dosage can be smaller than the optimum, and the dosage may be progressively increased during the course of treatment. Human dosage can be optimized, *e.g.*, in

a conventional Phase I dose escalation study. Dosing frequency can vary, depending on factors such as route of administration, dosage amount and the disease being treated. Exemplary dosing frequencies are once per day, once per week and once every two weeks. In some embodiments, dosing is once per day for 7 days. In some embodiments, dosing is once per month. In some embodiments, dosing is once every 3 months.

Combination Therapies

[00460] In various embodiments, an AON as disclosed herein can be administered in combination with one or more additional therapies. The combination therapy of the disclosed oligonucleotide and the one or more additional therapies can, in some embodiments, be synergistic in treating any of amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), ALS with FTD, Alzheimer's disease (AD), Parkinson's disease (PD), Parkinson's Disease with dementia, dementia with lewy bodies, synucleinopathies, Huntington's disease, Brachial plexus injuries, peripheral nerve injuries, progressive supranuclear palsy (PSP), brain trauma, spinal cord injury, tuberous sclerosis complex, Pick's Disease, tauopathies, primary age-related tauopathy, Down Syndrome, epilepsy/seizure disorder, depression, traumatic brain injury (TBI), chronic traumatic encephalopathy (CTE), HIV-associated neurocognitive disorders (HAND), multisystem atrophy, amnestic mild cognitive impairment, corticobasal degeneration (CBD) and/or neuropathies such a chemotherapy induced neuropathy, Spinocerebellar ataxia (SCA), SCA type 2, Spinal Muscular Atrophy (SMA), Parkinsonism, Niemann-Pick disease type C (NPC), Charcot-Marie-Tooth Disease (CMT), Mucopolysaccharidosis type II (MPSIIA), Mucolipidosis IV, GM1 gangliosidosis, Sporadic inclusion body myositis (sIBM), Henoch-Schonlein purpura (HSP), Gaucher's disease, and facial onset sensory and motor neuronopathy, Guam Parkinson-dementia complex, multisystem proteinopathy, Perry disease, and autism.

[00461] Example additional therapies for treating amyotrophic lateral sclerosis (ALS), frontotemporal dementia (FTD), or ALS with FTD include any of Riluzole (Rilutek), troriluzole, Edaravone (Radicava), rivastigmine, donepezil, QRL-101, QRL-201, galantamine, selective serotonin reuptake inhibitor, antipsychotic agents, cholinesterase inhibitors, memantine, benzodiazepine antianxiety drugs, AMX0035 (ELYBRIO®), ZILUCOPLAN (RA101495), dual AON intrathecal administration (*e.g.*, BIIB067, BIIB078), BIIB100, levodopa/carbidopa, dopaminergic agents (*e.g.*, ropinirole, pramipexole, rotigotine), medroxyprogesterone, KCNQ2/KCNQ3 openers, Pridopidine, PrimeC (combination of ciprofloxacin and Celebrex), olanzapine (Zyprexa), quetiapine (Seroquel), SSRIs, divalproex sodium (Depakote), carbamazepine (Tegretol), medroxyprogestrone, lithium, anticonvulsants and psychostimulant agents. Additional therapies can further include breathing care, physical therapy, occupational

therapy, speech therapy, and nutritional support. In various embodiments, an additional therapy can be a second antisense oligonucleotide. As an example, the second antisense oligonucleotide may be a second AON that targets a transcript.

[00462] A combination therapy (*e.g.*, in combination with an AON) may be selected according to the disease that is to be treated. For example, for treating Alzheimer's Disease, any Memantine, Rivastigmine, Galantamine, Donepezil, Aricept®, Exelon® (Rivastigmine), Razadyne®, Aducanumab, BAN2401, BIIB091 (gosuranemab), BIIB076, BIIB080 (IONIS-MAPTRx), Elayta (CT1812), MK1942, allogenic hMSC, nilotinib, ABT-957, acitretin, ABT-354, GV1001, Riluzole, CAD106, CNP520, AD-35, Rilapladib, DHP1401, T-817 MA, TC-5619, TPI-287, RVT-101, LY450139, JNJ-54861911, Dapagliflozin, GSK239512, PF-04360365, ASP0777, SB-742457 (a 5-HT6 receptor antagonist), PF-03654746 (an H_3 receptor antagonist), GSK933776 (an Fc-inactivated anti-β amyloid (Aβ) monoclonal antibody (mAb)), Posiphen ((+)-phenserine tartrate), AMX0035 (ELYBRIO®), coenzyme Q10, aducanamab (ADUHLEM), memantine (NAMENDA), Namzeric, Suvorexant (belsomra), lecanemab, or any combination thereof can be selected as an additional therapy.

[00463] For example for treating Parkinson's Disease, any of Levodopa, Carbidopa-levidopa, pramipexole (MIRAPEX), ropinirole (REQUIP), rotigotine (NEUPRO), apomorphine (APOKYN, KYNMOBI), selegiline (EDLEPRYL, ZELAPAR), rasagiline, entacapone (COMTAN), tolcapone (TASMAR), amantadine (GOCOVRI, SYMMETREL, OSMOLEX), trihexyphenidyl (ARTANE), BIIB054 (cinepanemab), BIIB094, BIIB118, ABBV-0805, zonisamide, deep brain stimulation, brain-derived neurotrophic factor, stem-cell transplant, Niacin, brain stem stimulation, nicotine, nabilone, PF-06649751, DNL201, LRRK2 inhibitors, CK1 inhibitors, isradipine, CLR4001, IRX4204, Yohimbine, coenzyme Q10, OXB-102, duloxetine, pioglitazone, preladenant, istradefylline (NOURIANZ), safinamide (XADAGO), benztropine (COGENTIN), opicapone (ongentys), exenatide, lingzhi, Caffeine, sarizotan, embryonic dopamine cell implantation, or any combination thereof can be selected as an additional therapy.

[00464] For example, for treating progressive supranuclear palsy (PSP), any of UCB0107, ABBV-8E12, F-18 AV1451, BIIB092, C2N-8E12, tideglusib, deep transcranial magnetic stimulation, lipoic acid, tolfenamica acid, lithium, AZP2006, Glial Clell Line-Derived Neurotrophic Factor, NBMI, suvorxant, zolpidem, TPI 287, davunetide, pimavanserin, Levodopa, Carbidopa-levidopa, pramipexole, ropinirole, rotigotine, apomorphine, selegiline, rasagiline, entacapone, tolcapone, amantadine, trihexyphenidyl, BIIB054 (cinepanemab), BIIB094, BIIB118, ABBV-0805, zonisamide, deep brain stimulation, brain-derived neurotrophic factor, stem-cell

transplant, Niacin, brain stem stimulation, nicotine, nabilone, PF-06649751, DNL201, LRRK2 inhibitors, CK1 inhibitors, isradipine, CLR4001, IRX4204, Yohimbine, coenzyme Q10, OXB-102, duloxetine, pioglitazone, preladenant, or any combination thereof can be selected as an additional therapy.

[00465] For example, for treating epilepsy, any of Brivaracetam (briviact), cannabidiol (epidiolex), carbamazepine (carbatrol, Tegretol), cenobamate (xcopri), diazepam (valium), lorazepam (Ativan), clonazepam (klonopin), eslicarbazepine (aptiom), ethosuximide (zarontin), felbamate (felbatol), fenfluramine (fintepla), lacosamide (VIMPAT), lamotrigine (Lamictal), levetiracetam (Keppra), oxcarbazepine (oxtellar xr, Trileptal), perampanel (fycompa), phenobarbital, phenytoin (dilantin), pregabalin (lyrica), tiagabine (gabitril), topiramate (topamax), valproate (depakene, depakote), zonisamide (zonegran), or any combination thereof can be selected an additional therapy.

[00466] For example for treating Huntington's Disease, any of Tetrabenazine, deutetrabenazine, physical therapy, risperidone, haloperidol, chlorpromazine, clonazepam, diazepam, benzodiazepines, selective serotonin reuptake inhibitors. quetiapine, carbatrol, valproate, lamotrigine, pridopidine, delta-9-tetrahydrocannabinol, cannabidiol, stem-cell therapy, ISIS-443139, nilotinib, resveratrol, neflamapimod, fenofibrate, creatine, RO7234292, SAGE-718, WVE-120102, WVE-120101, dimebon, minocycline, deep brain stimulation, ursodiol, coenzyme Q10, OMS643762, VX15/2503, PF-02545920, BN82451B, SEN0014196, olanzapine, tiapridal (tiapride), or any combination thereof, can be selected as an additional therapy.

[00467] For example, for treating brain trauma, any of anticoagulants, antidepressants, muscle relaxants, stimulants, anticonvulsants, anti-anxiety medication, erythropoietin, hyperbaric treatment, rehabilitation therapies (*e.g.*, physical, occupational, speech, psychological, or vocational counseling), or any combination thereof can be selected as an additional therapy.

[00468] For example, for treating spinal cord injury, any of AXER-204, glyburide, 5-hydroxytryptophan (5-HTP), L-3,4-dihydroxyphenylalanine (L-DOPA), or rehabilitation therapies (*e.g.*, physical therapy, occupational therapy, recreational therapy, use of assistive devices, improved strategies for exercise and healthy diets), or any combination thereof can be selected as an additional therapy.

[00469] For example, for treating corticobasal degeneration, any of TPI-287, lithium, occupational, physical, and speech therapy, or any combination thereof can be selected as an additional therapy.

[00470] For example, for treating neuropathies, such as a chemotherapy induced neuropathy, any of gabapentin, pregabalin, lamotrigine, carbamazepine, duloxetine, gabapentinoids, tricyclic

antidepressants, serotonin-norepinephrine reuptake inhibitors, opioids, neurotoxin, dextromethorphan, nicotinamide riboside, auto-antibodies targeting neuronal antigens (TS-HDS and FGFR3), or any combination thereof can be selected as an additional therapy.

[00471] For example, for treating spinal muscular atrophy, any of nusinersen (SPINRAZA), onasemnogene abeparvovec-xioi (ZOLGENSMA), risdiplam (EVRYSDI), or a combination thereof can be selectd as an additional therapy.

[00472] For example, for treating spinocerebellar ataxia, any of amantadine, armodafinil, baclofen, buspirone, carbamazepine, citalopram, clonazepam, desvenlafaxine, diazepam, duloxetine, escitalopram, flunarizine, fluoxetine, fluvoxamine, gabapentin, isoniazid, levetiracetam, levodopa, memantine, modafinil, ondansetron, paroxetine, pramipexole, primidone, riluzole, ropinirole, sertraline, tizanidine, topiramate, trihexyphenidyl, valproic acid, venlafaxine, BHV-4157, or a combination thereof can be selected as an additional therapy.

[00473] For example, for treating Niemann-Pick disease type C, any of anti-seizure medications, speech therapy, physical therapy, occupational therapy, Adrabetadex, Arimoclomol, N-Acetyl-L-Leucine, or any combination thereof can be selected as an additional therapy.

[00474] For example, for treating Charcot-Marie-Tooth Disease (CMT), any of physical and occupational therapies, orthopedic surgery, orthopedic devices, PXT3003, or any combination thereof can be selected as an additional therapy.

[00475] For example, for treating Mucopolysaccharidosis type II (MPSIIA), any of enzyme replacement therapy: idursulfase (Elaprase), surgical intervention (tonsillectomy and/or adenoidectomy), RGX-121 gene therapy, adalimumab, MT2013-31, or any combination thereof can be selected as an additional therapy.

[00476] For example, for treating Mucolipidosis IV, any of physical, occupational, and speech therapies, contact lenses and artificial tears, genetic counseling, or any combination thereof can be selected as an additional therapy.

[00477] For example, for treating GM1 gangliosidosis, any of anticonvulsants, physical and occupational therapies, galactosidase, gene delivery of galactosidase, LYS-GM101 gene therapy, or any combination thereof can be selected as an additional therapy.

[00478] For example, for treating Sporadic inclusion body myositis (sIBM), any of physical and occupational therapies, use of devices such as braces, walkers, wheelchairs, immunosuppressants, BYM338, or any combination thereof can be selected as an additional therapy.

[00479] For example, for treating Henoch-Schonlein purpura (HSP), any of corticosteroids, colchicine, dapsone, azathioprine, or any combination thereof can be selected as an additional therapy.

[00480] For example, for treating Gaucher's disease, any of enzyme replacement therapy, substrate reduction therapy, N-acetylcysteine, GZ/SAR402671, cerezyme, or any combination thereof can be selected as an additional therapy.

[00481] In various embodiments, the disclosed oligonucleotide and the one or more additional therapies can be conjugated to one another and provided in a conjugated form. Further description regarding conjugates involving the disclosed oligonucleotide is described below. When administering a combination therapy to a patient in need of such administration, the therapeutic agents in the combination, or a pharmaceutical composition or compositions comprising the therapeutic agents, may be administered in any order such as, for example, sequentially, concurrently, together, simultaneously and the like. In various embodiments, the disclosed oligonucleotide and one or more additional therapies are provided concurrently. In various embodiments, the disclosed oligonucleotide and one or more additional therapies are provided simultaneously. In various embodiments, the disclosed oligonucleotide and one or more additional therapies are provided sequentially.

Conjugates

[00482] In certain embodiments, provided herein are oligomeric compounds, which comprise an oligonucleotide (*e.g.*, AON) and optionally one or more conjugate groups and/or terminal groups. Conjugate groups include one or more conjugate moiety and a conjugate linker which links the conjugate moiety to the oligonucleotide. Conjugate groups may be attached to either or both ends of an oligonucleotide and/or at any internal position. In certain embodiments, conjugate groups are attached to the 2'-position of a nucleoside of a modified oligonucleotide. In certain embodiments, conjugate groups that are attached to either or both ends of an oligonucleotide are terminal groups. In certain such embodiments, conjugate groups or terminal groups are attached at the 3' and/or 5'-end of oligonucleotides. In certain such embodiments, conjugate groups (or terminal groups) are attached at the 3'-end of oligonucleotides. In certain embodiments, conjugate groups are attached near the 3'-end of oligonucleotides. In certain embodiments, conjugate groups (or terminal groups) are attached at the 5'-end of oligonucleotides. In certain embodiments, conjugate groups are attached near the 5'-end of oligonucleotides.

[00483] Examples of terminal groups include but are not limited to conjugate groups, capping groups, phosphate moieties, protecting groups, modified or unmodified nucleosides, and two or more nucleosides that are independently modified or unmodified.

Conjugate Groups

[00484] In certain embodiments, an AON is covalently attached to one or more conjugate groups. In certain embodiments, conjugate groups modify one or more properties of the attached oligonucleotide, including but not limited to pharmacodynamics, pharmacokinetics, stability, binding, absorption, tissue distribution, cellular distribution, cellular uptake, charge, and clearance. In particular embodiments, conjugate groups modify the circulation time (*e.g.*, increase) of the oligonucleotides in the bloodstream such that increased concentrations of the oligonucleotides are delivered to the brain. In particular embodiments, conjugate groups modify the residence time (*e.g.*, increase residence time) of the oligonucleotides in a target organ (*e.g.*, brain) such that increased residence time of the oligonucleotides improves their performance (*e.g.*, efficacy). In particular embodiments, conjugate groups increase the delivery of the oligonucleotide to the brain through the blood brain barrier and/or brain parenchyma (*e.g.*, through receptor mediated transcytosis). In particular embodiments, conjugate groups enable the oligonucleotide to target a specific organ (*e.g.*, the brain). In certain embodiments, conjugate groups impart a new property on the attached oligonucleotide, e.g., fluorophores or reporter groups that enable detection of the oligonucleotide. Certain conjugate groups and conjugate moieties have been described previously, for example: cholesterol moiety (Letsinger et al., Proc. Natl. Acad. Sci. USA, 1989, 86, 6553-6556), cholic acid (Manoharan et al., Bioorg. Med. Chem. Lett., 1994, 4, 1053-1060), a thioether, e.g., hexyl-S-tritylthiol (Manoharan et al., Ann. NY. Acad. Sci., 1992, 660, 306-309; Manoharan et al., Bioorg. Med. Chem. Lett., 1993, 3, 2765-2770), a thiocholesterol (Oberhauser et al., Nucl. Acids Res., 1992, 20, 533-538), an aliphatic chain, e.g., do-decan-diol or undecyl residues (Saison-Behmoaras et al., EMBO J, 1991, 10, 1111-1118; Kabanov et al., FEBS Lett., 1990, 259, 327-330; Svinarchuk et al., Biochimie, 1993, 75, 49-54), a phospholipid, *e.g.*, di-hexadecyl-rac -glycerol or triethyl -ammonium l,2-di-O-hexadecyl-rac-glycero-3-H-phosphonate (Manoharan et al., Tetrahedron Lett., 1995, 36, 3651-3654; Shea et al., Nucl. Acids Res., 1990, 18, 3777-3783), a polyamine or a polyethylene glycol chain (Manoharan et al., Nucleosides & Nucleotides, 1995, 14, 969-973), or adamantane acetic acid a palmityl moiety (Mishra et al., Biochim. Biophys. Acta, 1995, 1264, 229-237), an octadecylamine or hexylamino-carbonyl-oxycholesterol moiety (Crooke et al., J. Pharmacol. Exp. Ther., 1996, 277, 923-937), a tocopherol group (Nishina *et al.*, Molecular Therapy Nucleic Acids, 2015, 4, e220; and Nishina *et al.*, Molecular Therapy, 2008, 16, 734-740), or a GalNAc cluster (*e.g.*, WO2014/179620).

Conjugate Moieties

[00485] Conjugate moieties include, without limitation, intercalators, reporter molecules, polyamines, polyamides, peptides, carbohydrates, vitamin moieties, polyethylene glycols,

thioethers, polyethers, cholesterols, thiocholesterols, cholic acid moieties, folate, lipids, phospholipids, biotin, phenazine, phenanthridine, anthraquinone, adamantane, acridine, fluoresceins, rhodamines, coumarins, bile acids, phenylbutyrate, fluorophores, and dyes. In particular embodiments, conjugate moieties are selected from a peptide, a lipid, N-acetylgalactosamine (GalNAc), cholesterol, vitamin E, lipoic acid, panthothenic acid, polyethylene glycol, an antibody (*e.g.*, an antibody for crossing the blood brain barrier such as anti-transferrin receptor antibody), or a cell-penetrating peptide (*e.g.*, transactivator of transcription (TAT) and penetratine).

[00486] In certain embodiments, a conjugate moiety comprises an active drug substance, for example, aspirin, warfarin, phenylbutazone, ibuprofen, suprofen, fen-bufen, ketoprofen, (*S*)-(+)-pranoprofen, carprofen, dansylsarcosine, 2,3,5-triiodobenzoic acid, fingolimod, flufenamic acid, folinic acid, a benzothiadiazide, chlorothiazide, a diazepine, indomethacin, a barbiturate, a cephalosporin, a sulfa drug, an antidiabetic, an antibacterial or an antibiotic.

Conjugate Linkers

[00487] Conjugate moieties are attached to an AON through conjugate linkers. In certain oligomeric compounds, the conjugate linker is a single chemical bond (*e.g.*, the conjugate moiety is attached directly to an oligonucleotide through a single bond). In certain embodiments, the conjugate linker comprises a chain structure, an oligomer of repeating units such as ethylene glycol, nucleosides, or amino acid units.

[00488] In certain embodiments, a conjugate linker comprises one or more groups selected from alkyl, amino, oxo, amide, disulfide, polyethylene glycol, ether, thioether, and hydroxylamino. In certain such embodiments, the conjugate linker comprises groups selected from alkyl, amino, oxo, amide and ether groups. In certain embodiments, the conjugate linker comprises groups selected from alkyl and amide groups. In certain embodiments, the conjugate linker comprises groups selected from alkyl and ether groups. In certain embodiments, the conjugate linker comprises at least one phosphorus moiety. In certain embodiments, the conjugate linker comprises at least one phosphate group. In certain embodiments, the conjugate linker includes at least one neutral linking group.

[00489] In certain embodiments, conjugate linkers, including the conjugate linkers described above, are bifunctional linking moieties, *e.g.*, those known in the art to be useful for attaching conjugate groups to parent compounds, such as the oligonucleotides provided herein. In general, a bifunctional linking moiety comprises at least two functional groups. One of the functional groups is selected to bind to a particular site on a parent compound and the other is selected to bind to a conjugate group. Examples of functional groups used in a bifunctional linking moiety include but

are not limited to electrophiles for reacting with nucleophilic groups and nucleophiles for reacting with electrophilic groups. In certain embodiments, bifunctional linking moieties comprise one or more groups selected from amino, hydroxyl, carboxylic acid, thiol, alkyl, alkenyl, and alkynyl.

[00490] Examples of conjugate linkers include but are not limited to pyrrolidine, 8-amino-3,6-dioxaoctanoic acid (ADO), succinimidyl 4-(N-maleimidomethyl) cyclohexane- l-carboxylate (SMCC) and 6-aminohexanoic acid (AHEX or AHA). Other conjugate linkers include but are not limited to substituted or unsubstituted C_1-C_{10} alkyl, substituted or unsubstituted C_2-C_{10} alkenyl or substituted or unsubstituted C_2-C_{10} alkynyl, wherein a nonlimiting list of preferred substituent groups includes hydroxyl, amino, alkoxy, carboxy, benzyl, phenyl, nitro, thiol, thioalkoxy, halogen, alkyl, aryl, alkenyl and alkynyl.

[00491] In certain embodiments, conjugate linkers comprise 1-10 linker-nucleosides. In certain embodiments, conjugate linkers comprise 2-5 linker-nucleosides. In certain embodiments, conjugate linkers comprise 3 linker-nucleosides.

[00492] In certain embodiments, such linker-nucleosides are modified nucleosides. In certain embodiments such linker-nucleosides comprise a modified sugar moiety. In certain embodiments, linker-nucleosides are unmodified. In certain embodiments, linker-nucleosides comprise an optionally protected heterocyclic base selected from a purine, substituted purine, pyrimidine or substituted pyrimidine. In certain embodiments, a cleavable moiety is a nucleoside selected from uracil, thymine, cytosine, 4-N-benzoylcytosine, 5-methylcytosine, 4-N -benzoyl-5 -methyl cytosine, adenine, 6-N-benzoyladenine, guanine and 2-N-isobutyrylguanine. It is typically desirable for linker-nucleosides to be cleaved from the oligomeric compound after it reaches a target tissue. Accordingly, linker-nucleosides are typically linked to one another and to the remainder of the oligomeric compound through cleavable bonds. In certain embodiments, such cleavable bonds are phosphodiester bonds.

[00493] Herein, linker-nucleosides are not considered to be part of the oligonucleotide. Accordingly, in embodiments in which an oligomeric compound comprises an oligonucleotide consisting of a specified number or range of linked nucleosides and/or a specified percent complementarity to a reference nucleic acid and the oligomeric compound also comprises a conjugate group comprising a conjugate linker comprising linker-nucleosides, those linker-nucleosides are not counted toward the length of the oligonucleotide and are not used in determining the percent complementarity of the oligonucleotide for the reference nucleic acid.

[00494] In certain embodiments, it is desirable for a conjugate group to be cleaved from the AON. For example, in certain circumstances oligomeric compounds comprising a particular conjugate moiety are better taken up by a particular cell type, but once the oligomeric compound

has been taken up, it is desirable that the conjugate group be cleaved to release the unconjugated or parent oligonucleotide. Thus, certain conjugate linkers may comprise one or more cleavable moieties. In certain embodiments, a cleavable moiety is a cleavable bond. In certain embodiments, a cleavable moiety is a group of atoms comprising at least one cleavable bond. In certain embodiments, a cleavable moiety comprises a group of atoms having one, two, three, four, or more than four cleavable bonds. In certain embodiments, a cleavable moiety is selectively cleaved inside a cell or subcellular compartment, such as a lysosome. In certain embodiments, a cleavable moiety is selectively cleaved by endogenous enzymes, such as nucleases.

[00495] In certain embodiments, a cleavable bond is selected from among: an amide, an ester, an ether, one or both esters of a phosphodiester, a phosphate ester, a carbamate, or a disulfide. In certain embodiments, a cleavable bond is one or both of the esters of a phosphodiester. In certain embodiments, a cleavable moiety comprises a phosphate or phosphodiester. In certain embodiments, the cleavable moiety is a phosphate linkage between an oligonucleotide and a conjugate moiety or conjugate group.

[00496] In certain embodiments, a cleavable moiety comprises or consists of one or more linker-nucleosides. In certain such embodiments, the one or more linker-nucleosides are linked to one another and/or to the remainder of the oligomeric compound through cleavable bonds. In certain embodiments, such cleavable bonds are unmodified phosphodiester bonds. In certain embodiments, a cleavable moiety is 2'-deoxy nucleoside that is attached to either the 3' or 5'-terminal nucleoside of an oligonucleotide by a phosphate internucleoside linkage and covalently attached to the remainder of the conjugate linker or conjugate moiety by a phosphate or phosphorothioate linkage. In certain such embodiments, the cleavable moiety is 2'-deoxy adenosine.

Terminal Groups

[00497] In certain embodiments, oligomeric compounds comprise one or more terminal groups. In certain such embodiments, oligomeric compounds comprise a stabilized 5'-phosphate. Stabilized 5'-phosphates include, but are not limited to 5'-phosphonates, including, but not limited to 5'-vinylphosphonates. In certain embodiments, terminal groups comprise one or more abasic nucleosides and/or inverted nucleosides. In certain embodiments, terminal groups comprise one or more 2'-linked nucleosides. In certain such embodiments, the 2'-linked nucleoside is an abasic nucleoside.

Diagnostic Methods

[00498] The disclosure also provides a method of diagnosing a patient with a neurological disease that relies upon detecting levels of target expression signal in one or more biological samples of a patient. As used herein, the term "target expression signal" can refer to any indication of target gene expression, or gene or gene product activity (e.g., target gene expression, or gene or gene product activity for any one of PPM1A, ATXN2, SOD1, or MAPT). Gene products include RNA (*e.g.*, mRNA), peptides, and proteins. Indices of gene expression that can be assessed include, but are not limited to, gene or chromatin state, gene interaction with cellular components that regulate gene expression, gene product expression levels (*e.g.*, RNA expression levels, protein expression levels), or interaction of RNA or protein with transcriptional, translational, or post-translational processing machinery. Indices of gene product activity include, but are not limited to, assessment of signaling activity (*e.g.*, assessment of protein signaling activation or phosphorylation).

[00499] Detection of target expression signal may be accomplished through *in vivo*, *in vitro*, or *ex vivo* methods. In a preferred embodiment, methods of the disclosure may be carried out *in vitro*. Methods of detecting may involve detection in blood, serum, fecal matter, tissue, cerebrospinal fluid, spinal fluid, extracellular vesicles (for example, CSF exosomes), or cells of a patient. Detection may be achieved by measuring target expression signal in whole tissue, tissue explants, cell cultures, dissociated cells, cell extract, extracellular vesicles (for example, CSF exosomes), or body fluids, including blood, spinal fluid, cerebrospinal fluid, urine, lymphatic fluid, or serum. Biochemical assays that examine protein or RNA expression may also be used for detection. For instance, one may evaluate levels of a protein indicative of a neurological disease, in dissociated cells or non-dissociated tissue via immunocytochemical, immunohistochemical, Western blotting, or Northern blotting methods, or methods useful for evaluating RNA levels such as quantitative or semi-quantitative polymerase chain (*e.g.*, digital PCR (DigitalPCR, dPCR, or ddPCR), qPCR etc.) reaction.

[00500] One may also evaluate the presence or level of expression of useful biomarkers (*e.g.*, neurofilament light (NEFL), neurofilament heavy (NEFH), SOD1/SOD1 transcripts, TDP-43 or p75 extracellular domain ($p75^{ECD}$)) found in spinal cord fluid, cerebrospinal fluid, plasma, extracellular vesicles (for example, exosome-like cerebrospinal fluid extracellular vesicles ("CSF exosomes"), such as those described in Welton *et al.*, (2017) "Cerebrospinal fluid extracellular vesicle enrichment for protein biomarker discovery in neurological disease; multiple sclerosis" *J Extracell Vesicles.*, 6(1):1-10; and Street *et al.*, (2012) "Identification and proteomic profiling of exosomes in human cerebrospinal fluid" *J Transl. Med.*, 10:5), urine, fecal matter, lymphatic fluid, blood, plasma, or serum to evaluate disease state. Additional measurements may include

strength duration time constant (SDTC), short interval cortical inhibition (SICI), dynamometry, accurate test of limb isometric strength (ATLIS), compound muscle action potential (CMAP), and ALSFRS-R. In certain embodiments, urinary neurotrophin receptor p75 extracellular domain ($p75^{ECD}$) is a disease progression and prognostic biomarker in amyotrophic lateral sclerosis (ALS). Phosphorylated neurofilament heavy chain (pNFH) in cerebrospinal fluid (CSF) predict disease status and survival in amyotrophic lateral sclerosis (ALS) patients. CSF pNFH can serve as a prognostic biomarker for clinical trials, which will increase the likelihood of successfully developing a treatment for ALS.

[00501] In some embodiments, diagnosing a patient with a neurological disease such as Alzheimer's disease can involve evaluating mental performance of the patient. Evaluation of mental performance can involve a Mini-Mental State Examination (MMSE). Additional examples for measuring mental performance include the Functional Assessment Staging Test (FAST), the Motor Screening Task, Paired Associates Learning, Spatial Working Memory, Reaction time, Rapid Visual Information Processing, Delayed Matching to Sample, and Pattern Recognition Memory In some embodiments, diagnosing a patient with a neurological disease such as Parkinson's disease involves implementing the Unified Parkinson's Disease Rating Scale (UPDRS) as the performance measure. Other measures for quantifying aspects of functional performance not measured by the UPDRS can include the Berg Balance Scale (BBS), Forward Functional Reach Test (FFR), Backward Functional Reach Test (BFR), Timed "Up & Go" Test (TUG), and gait speed.

Modifications in General

[00502] While certain compounds, compositions and methods described herein have been described with specificity in accordance with certain embodiments, the following examples serve only to illustrate the compounds described herein and are not intended to limit the same. Each of the references, GenBank accession numbers, and the like recited in the present application is incorporated herein by reference in its entirety.

[00503] Although the sequence listing accompanying this filing identifies each sequence as either "RNA" or "DNA" as required, in reality, those sequences may be modified with any combination of chemical modifications. Accordingly, nucleic acid sequences provided herein, including, but not limited to those in the sequence listing, are intended to encompass nucleic acids containing any combination of natural or modified RNA and/or DNA, including, but not limited to such nucleic acids having modified nucleobases. By way of further example and without limitation, an oligomeric compound having the nucleobase sequence "ATCGATCG" encompasses any

oligomeric compounds having such nucleobase sequence, whether modified or unmodified, including, but not limited to, oligomeric compounds having other modified nucleobases, such as "AT^{m}CGAUCG," wherein ^{m}C indicates a cytosine base comprising a methyl group at the 5-position.

[00504] Certain compounds described herein (*e.g.*, modified oligonucleotides) have one or more asymmetric center and thus give rise to enantiomers, diastereomers, and other stereoisomeric configurations that may be defined, in terms of absolute stereochemistry, as (R) or (S), as α or β such as for sugar anomers, or as (D) or (L), such as for amino acids, etc. Compounds provided herein that are drawn or described as having certain stereoisomeric configurations include only the indicated compounds. Compounds provided herein that are drawn or described with undefined stereochemistry included all such possible isomers, including their stereorandom and optically pure forms, unless specified otherwise. Likewise, all tautomeric forms of the compounds herein are also included unless otherwise indicated. Unless otherwise indicated, compounds described herein are intended to include corresponding salt forms.

[00505] The compounds described herein include variations in which one or more atoms are replaced with a non-radioactive isotope or radioactive isotope of the indicated element. For example, compounds herein that comprise hydrogen atoms encompass all possible deuterium substitutions for each of the ^{1}H hydrogen atoms. Isotopic substitutions encompassed by the compounds herein include but are not limited to: ^{2}H or ^{3}H in place of ^{1}H, ^{13}C or ^{14}C in place of ^{12}C, ^{15}N in place of ^{14}N, ^{17}O or ^{18}O in place of ^{16}O, and ^{33}S, ^{34}S, ^{35}S, or ^{36}S in place of ^{32}S. In certain embodiments, non-radioactive isotopic substitutions may impart new properties on the oligomeric compound that are beneficial for use as a therapeutic or research tool.

EXAMPLES

[00506] The disclosure is further illustrated by the following examples. The examples are provided for illustrative purposes only, and are not to be construed as limiting the scope or content of the disclosure in any way.

Example 1: Design and Selection of PPM1A Gapmer Antisense Oligonucleotides

[00507] PPM1A antisense oligonucleotides were evaluated in iPSC derived human motor neurons (hMN) purchased from FujiFilm Cellular Dynamics (Catalog #: C1050). The cells were seeded in 96-well plates at a density of 10,000 cells/ well. Antisense oligonucleotide (AON) to PPM1A were transfected with Endoporter (Gene Tools, Philomath, OR, USA) to decrease

expression of *PPM1A* transcript. Vehicle control consisted of motor neuron treatment with Endoporter alone.

[00508] To evaluate PPM1A AON ability to knock down PPM1A mRNA transcripts, antisense oligonucleotides to PPM1A were incubated with Endoporter in media before addition to the cells. After 72 hours, cells lysate was prepared and collected from the 96-well plates for RT-qPCR. From the cell lysates, cDNA was generated, and multiplexed RT-qPCR assay performed with Taqman probes for PPM1A and reference GAPDH quantification.

[00509] Using the Applied Biosystems® PCR Thermal Cycler (SimpliAmp), cDNA was prepared directly from the cell lysates by performing one cycle of reverse transcription at 37°C for 30 minutes, followed by heat inactivation of the RT enzyme at 95°C for 5 minutes.

[00510] Transcript levels were detected by RT-qPCR using Taqman. Specifically, RT-qPCR was performed for detecting GAPDH using Thermofisher TaqMan Gene Expression Assay Hs_03929097_g1. RT-qPCR was performed for detecting PPM1A using Thermofisher TaqMan Gene Expression Assay Hs06637123_g1.

[00511] RT-qPCR was performed on Applied Biosystems® QuantStudio 6 Flex Real-Time PCR System. One cycle of uracil-N-glycosylase (UNG) incubation was performed at a temperature of 50°C for 2 min. One cycle of polymerase activation/initial denaturation was performed at a temperature of 95°C for 20 seconds. Forty cycles of amplification were performed at a temperature of 95°C for 1 second followed by 60°C for 20 seconds.

[00512] PPM1A signal cycle threshold (Ct) was normalized to GAPDH (ΔCt). To visualize the quantitative changes (*e.g.*, ratio of PPM1A transcript decrease), the normalized PPM1A signal was further normalized to the mean vehicle signal (treated with Endoporter alone, ΔΔCt). Relative quantity (RQ) of transcript level was calculated using the equation $RQ=2^{-\Delta\Delta Ct}$ and is used to describe the treatment condition comparison to normal, healthy levels.

[00513] PPM1A AON knock-down of PPM1A transcripts were presented as mean relative quantity (RQ_{mean}) of the technical triplicates, compared to mean endogenous PPM1A expression ($RQ_{mean}=1$).

Table 5A: PPM1A AON sequences (including PPM1A gapmer sequences and PPM1A gapmer sequences with one or two spacers)

* Unless otherwise noted, for the sequences described in Table 5, the gapmer structure is denoted by "e" = a ribonucleoside and "d" = a deoxyribonucleoside. Every ribonucleoside is a 2'-MOE modified ribonucleoside. Each "C" cytosine that is a ribonucleoside is a 5-methylcytosine (5-MeC) (and therefore is a 5-MeC, 2'-MOE modified ribonucleoside). Spacer, as indicated by S, is not a nucleoside. S is a spacer represented by Formula (Iia').

* Unless otherwise noted, for the sequences described in Table 5, the gapmer structure is denoted by "e" = a ribonucleoside and "d" = a deoxyribonucleoside. Every ribonucleoside is a 2'-MOE modified ribonucleoside. Each "C" cytosine that is a ribonucleoside is a 5-methylcytosine (5-MeC) (and therefore is a 5-MeC, 2'-MOE modified ribonucleoside). Spacer, as indicated by S, is not a nucleoside. S is a spacer represented by Formula (Iia').

Example 2: Design and Selection of ATXN2 Antisense Oligonucleotides

[00514] ATXN2 antisense oligonucleotides were evaluated in iPSC derived human motor neurons (hMN) purchased from FujiFilm Cellular Dynamics (Catalog #: C1050). The cells were seeded in 96-well plates at a density of 10,000 cells/ well. Antisense oligonucleotide (AON) to ATXN2 were transfected with Endoporter (Gene Tools, Philomath, OR, USA) to decrease expression of *ATXN2* transcript. Vehicle control consisted of motor neuron treatment with Endoporter alone.

[00515] To evaluate ATXN2 AON ability to knock down ATXN2 mRNA transcripts, antisense oligonucleotides to ATXN2 were incubated with Endoporter in media before addition to the cells. After 72 hours, cells lysate was prepared and collected from the 96-well plates for RT-qPCR. From the cell lysates, cDNA was generated, and multiplexed RT-qPCR assay performed with Taqman probes for ATXN2 and reference GAPDH quantification.

[00516] Using the Applied Biosystems® PCR Thermal Cycler (SimpliAmp), cDNA was prepared directly from the cell lysates by performing one cycle of reverse transcription at 37°C for 30 minutes, followed by heat inactivation of the RT enzyme at 95°C for 5 minutes.

[00517] Transcript levels were detected by RT-qPCR using Taqman. Specifically, RT-qPCR was performed for detecting GAPDH using Thermofisher TaqMan Gene Expression Assay Hs_03929097_g1. RT-qPCR was performed for detecting ATXN2 using Thermofisher TaqMan Gene Expression Assay Hs00268077_m1.

[00518] RT-qPCR was performed on Applied Biosystems® QuantStudio 6 Flex Real-Time PCR System. One cycle of UNG incubation was performed at a temperature of 50°C for 2 min. One cycle of polymerase activation/initial denaturation was performed at a temperature of 95°C for 20 seconds. Forty cycles of amplification were performed at a temperature of 95°C for 1 second followed by 60°C for 20 seconds.

[00519] ATXN2 signal cycle threshold (Ct) was normalized to GAPDH (ΔCt). To visualize the quantitative changes (*e.g.*, ratio of ATXN2 transcript decrease), the normalized ATXN2 signal was further normalized to the mean vehicle signal (treated with Endoporter alone, ΔΔCt). Relative quantity (RQ) of transcript level was calculated using the equation $RQ=2^{-\Delta\Delta Ct}$ and is used to describe the treatment condition comparison to normal, healthy levels.

[00520] ATXN2 AON knock-down of ATXN2 transcripts were presented as mean relative quantity (RQ_{mean}) of the technical triplicates, compared to mean endogenous ATXN2 expression ($RQ_{mean}=1$).

Table 6: ATXN2 AON sequences (including ATXN2 gapmer sequences and ATXN2 gapmer sequences with one or two spacers)

SEQ ID NO:	AON sequence 5'-3'*	Spacer Position	Internucleoside Linkage Pattern ("s" indicates phosphorothioate, "o" indicates phosphodiester)	Gapmer structure	500 nM Dose Relative Quantity	200 nM Dose Relative Quantity

* Unless otherwise noted, for the sequences described in Table 6, the gapmer structure is denoted by "e" = a ribonucleoside and "d" = a deoxyribonucleoside. Every ribonucleoside is a 2'-MOE modified ribonucleoside. Each "C" cytosine is a 5-methylcytosine (5-MeC). Spacer, as indicated by S, is not a nucleoside. S is a spacer represented by Formula (Iia').

Example 3: Design and Selection of SOD1 Antisense Oligonucleotides

[00521] SOD1 antisense oligonucleotides were evaluated in iPSC derived human motor neurons (hMN). The cells were seeded in 96-well plates at a density of 20,000 cells/ well. Antisense oligonucleotide (AON) to SOD1 were transfected with Endoporter (Gene Tools, Philomath, OR, USA) to decrease expression of SOD1 transcript. Vehicle control consisted of motor neuron treatment with Endoporter alone.

[00522] To evaluate SOD1 AON ability to knock down SOD1 mRNA transcripts, antisense oligonucleotides to SOD1 were incubated with Endoporter in media before addition to the cells. After 72 hours, cells lysate was prepared and collected from the 96-well plates for RT-qPCR. From the cell lysates, cDNA was generated, and multiplexed RT-qPCR assay performed with Taqman probes for SOD1 and reference GAPDH quantification.

[00523] Transcript levels were detected by RT-qPCR using Taqman. Specifically, RT-qPCR was performed for detecting GAPDH using Thermofisher TaqMan Gene Expression Assay Hs_03929097_g1. RT-qPCR was performed for detecting SOD1 using Thermofisher TaqMan Gene Expression Assay Hs00533490_m1.

[00524] RT-qPCR was performed on Applied Biosystems ® 7500 Real-time PCR systems. One cycle of reverse transcription was performed at a temperature of 50oC for 5 min. One cycle of RT inactivation/initial denaturation was performed at a temperature of 95oC for 20 seconds. Forty five cycles of amplification were performed at a temperature of 95oC for 1 second followed by 60oC for 20 seconds.

[00525] SOD1 signal cycle threshold (Ct) was normalized to GAPDH (ΔCt). To visualize the quantitative changes (e.g., ratio of SOD1 transcript decrease), the normalized SOD1 signal was further normalized to the mean vehicle signal (treated with Endoporter alone, ΔΔCt). Relative quantity (RQ) of transcript level was calculated using the equation $RQ=2^{-\Delta\Delta Ct}$ and is used to describe the treatment condition comparison to normal, healthy levels.

[00526] SOD1 AON knock-down of SOD1 transcripts were presented as mean relative quantity (RQ_{mean}) of the technical triplicates, compared to mean endogenous SOD1 expression ($RQ_{mean}=1$).

Table 7: SOD1 AON sequences (including SOD1 gapmer sequences and SOD1 gapmer sequences with one or two spacers)

SEQ ID NO:	AON sequence 5'-3' S indicates presence of spacer	Spacer Position	Internucleoside Linkage Pattern ("s" indicates phosphorothioate, "o" indicates phosphodiester)	Gapmer structure	500 nM Dose Relative Quantity	200 nM Dose Relative Quantity

* Unless otherwise noted, for the sequences described in Table 7, the gapmer structure is denoted by "e" = a ribonucleoside and "d" = a deoxyribonucleoside. Every ribonucleoside is a 2'-MOE modified ribonucleoside. Each "C" cytosine is a 5-methylcytosine (5-MeC). Spacer, as indicated by S, is not a nucleoside. S is a spacer represented by Formula (Iia').

Example 4: Design and Selection of MAPT Antisense Oligonucleotides

[00527] MAPT antisense oligonucleotides were evaluated in iPSC derived human motor neurons (hMN) purchased from FujiFilm Cellular Dynamics (Catalog #: C1050). The cells were seeded in 96-well plates at a density of 10,000 cells/ well. Antisense oligonucleotide (AON) to MAPT were transfected with Endoporter (Gene Tools, Philomath, OR, USA) to decrease expression of MAPT transcript. Vehicle control consisted of motor neuron treatment with Endoporter alone.

[00528] To evaluate MAPT AON ability to knock down MAPT mRNA transcripts, antisense oligonucleotides to MAPT were incubated with Endoporter in media before addition to the cells. After 72 hours, cells lysate was prepared and collected from the 96-well plates for RT-qPCR. From the cell lysates, cDNA was generated, and multiplexed RT-qPCR assay performed with Taqman probes for MAPT and reference GAPDH quantification.

[00529] Using the Applied Biosystems® QuantStudio 6 Flex Real-Time PCR System, cDNA was prepared directly from the cell lysates by performing one cycle of reverse transcription at 37°C for 30 minutes, followed by heat inactivation of the RT enzyme at 95°C for 5 minutes.

[00530] Transcript levels were detected by RT-qPCR using Taqman. Specifically, RT-qPCR was performed for detecting GAPDH using Thermofisher TaqMan Gene Expression Assay Hs_03929097_g1. RT-qPCR was performed for detecting MAPT using Thermofisher TaqMan Gene Expression Assay Hs00902194_m1.

[00531] RT-qPCR was performed on Applied Biosystems® QuantStudio 6 Flex Real-Time PCR System. One cycle of UNG incubation was performed at a temperature of 50°C for 2 min. One cycle of polymerase activation/initial denaturation was performed at a temperature of 95°C for 20 seconds. Forty cycles of amplification were performed at a temperature of 95°C for 1 second followed by 60°C for 20 seconds.

[00532] MAPT signal cycle threshold (Ct) was normalized to GAPDH (ΔCt). To visualize the quantitative changes (e.g., ratio of MAPT transcript decrease), the normalized MAPT signal was further normalized to the mean vehicle signal (treated with Endoporter alone, ΔΔCt). Relative quantity (RQ) of transcript level was calculated using the equation $RQ=2^{-\Delta\Delta Ct}$ and is used to describe the treatment condition comparison to normal, healthy levels.

[00533] MAPT AON knock-down of MAPT transcripts were presented as mean relative quantity (RQ_{mean}) of the technical triplicates, compared to mean endogenous MAPT expression ($RQ_{mean}=1$).

Table 8: MAPT AON sequences (including MAPT gapmer sequences and MAPT gapmer sequences with one or two spacers)
