[57] **ABSTRACT**

A paintable, scratch-resistant, thermoplastic composition containing 40–70% by weight of total polymer of an uncured copolymer of ethylene and higher α-olefin, said copolymer containing at least 67 weight percent ethylene units and having a Mooney viscosity of from 40–80; 30–60% by weight of total polymer of crystalline propylene polymer; and 20–50 parts carbon black per 100 parts of total weight of polymers having an oil absorption number of 50–140 cc's per 100 grams and a mean particle diameter of about 34–77 millimicrons.
