(54) Title: METHODS FOR PREPARING A SOLID-FIBRIN WEB

(57) Abstract: The present invention relates to a method of preparing a solid-fibrin web or autologous fibrin glue, to be used for alleviating viral infections and/or rejection cases in surgery, by contacting plasma from a patient with a calcium-coagulation activator, and concurrently coagulating and axially centrifugating the plasma to form the solid-fibrin web, said web being suitable for regenerating body tissue in a living organism.

* Special categories of cited documents:

A document defining the general state of the art which is not considered to be of particular relevance

E earlier document but published on or after the international filing date

L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

O document referring to an oral disclosure, use, exhibition or other means

P document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
