(54) Title:	Beam connector system for connecting a structural element to a beam, a furniture and a kit comprising a flat package and a furniture frame
(56) Cited documents:	DE 2155234 A1
(57) Abstract:	

The invention concerns a beam connector system (15a) for connecting a structural element (20a) to a beam (14a-b). It also comprises a furniture, a furniture frame, a kit, comprising a flat package (3) and a furniture frame, and a method of assembling a piece of furniture. The beam connector system (15a) comprises a sleeve bracket (30), a first insert part (22a; 122a), a second insert part (28a) and a clamping arrangement (56, 68). The sleeve bracket (30) is to hold a first beam (14a) in one direction. The sleeve bracket (30) comprises a sleeve (24a), defining a guide having a direction different from said one direction. The first insert part (22a; 122a) is insertable in the sleeve (24a) and is to hold a structural element (20a; 120). The first and second insert parts (22a; 122a; 28a) define a mutual overlap region (114) when inserted in the sleeve (24a). The clamping arrangement (56, 68) is to clamp the first and insert parts (22a; 122a; 28a) against each other and against the sleeve (24a).
