(54) Title: METHOD AND APPARATUS PROVIDING FOR CONTROL OF A CONTENT CAPTURING DEVICE WITH A REQUESTING DEVICE TO THEREBY CAPTURE A DESIRED CONTENT SEGMENT

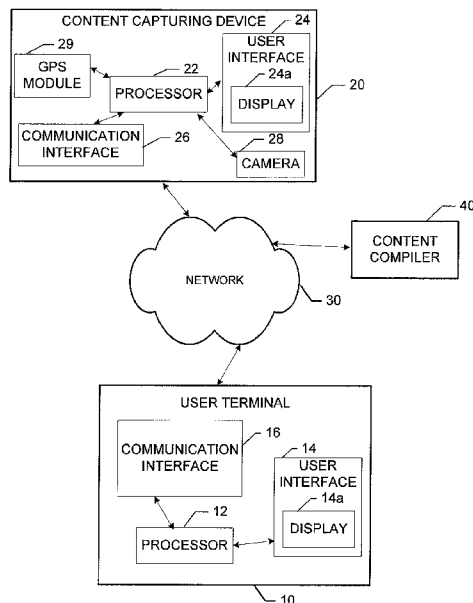

FIG. 1

(57) Abstract: An apparatus providing for transmission of a desired content segment to a receiving device may include a content preview unit for displaying a content preview corresponding to a content segment captured by a content capturing device. A content capturing device selector may receive a selection of the content capturing device which satisfies one or more predefined conditions as determined by a condition testing unit of the apparatus. Once selected, a control unit may allow for control of the content capturing device with the receiving device to thereby capture a desired content segment. Control may occur directly or indirectly, such as through providing written control instructions, which may be translated using a translator of the apparatus. Thus, the apparatus may provide for transmission of the desired content segment to the receiving device.
