# UNITED STATES PATENT OFFICE.

CHARLES LAMMERTZ, OF NEW YORK, N. Y.

## IMPROVEMENT IN CIGARETTE-HOLDERS.

Specification forming part of Letters Patent No. **185,641**, dated December 26, 1876; application filed October 6, 1876.

*To all whom it may concern:*

Be it known that I, CHARLES LAMMERTZ, of the city, county, and State of New York, have invented certain Improvements in Cigarette-Holders, of which the following is a specification:

The object of my invention is as follows: First, the cigarette-holder has especially the advantage over all others of its kind, in that the burning remainders of the cigarettes may be removed at once by pressing inward the mouth-piece, dispensing with other instrument, which is exceedingly convenient. The holder, when compressed, does not occupy half the space as others, and is consequently much easier to be carried. The holder is always clean inside, as the air circulates therein and prevents the accumulation of any uncleanness. It does not burn on the opening.

In the accompanying drawing, Figure 1 represents a side elevation of my cigarette-holder. Fig. 2 represents a longitudinal central sec-

tion of the same. Fig. 3 shows the same when pushed together.

Similar letters refer to same parts in the different figures.

The cigarette-holder consists of two parts—viz., the mouth-piece A and the conical pipe B. The mouth-piece consists of a piece of horn or other material, and the sheath of plated nickel silver or genuine silver, or other material. Consequently the whole device is in two parts, and capable of being drawn out when to be used, and closed when not in use.

I claim as my invention—

A cigarette-holder consisting of the telescopic tubes A B, as described, for the purpose set forth.

Dated New York, October 5, 1876.

CHARLES LAMMERTZ.
