COMPOUNDS AND COMPOSITIONS FOR INHIBITING THE ACTIVITY OF ABL1, ABL2 AND BCR-ABL1

CROSS-REFERENCED TO RELATED APPLICATIONS

[0001] This application claims the benefit of U.S. Provisional Application No. 61/647,197 filed on 15 May, 2012 and U.S. Provisional Application No. 61/787,513 filed on 15 March 2013, each of which is hereby incorporated by reference in its entirety.

FIELD OF THE INVENTION

[0002] The present invention relates to compounds capable of inhibiting the tyrosine kinase enzymatic activity of the Abelson protein (ABL1), the Abelson-related protein (ABL2) and related chimeric proteins, in particular BCR-ABL1. The invention further provides a process for the preparation of compounds of the invention, pharmaceutical preparations comprising such compounds and methods of using such compounds in the treatment of cancers.

BACKGROUND OF THE INVENTION

[0003] The tyrosine kinase activity of the ABL1 protein is normally tightly regulated, with the N-terminal cap region of the SH3 domain playing an important role. One regulatory mechanism involves the N-terminal cap glycine-2 residue being myristoylated and then interacting with a myristate binding site within the SHI catalytic domain. A hallmark of chronic myeloid leukemia (CML) is the Philadelphia chromosome (Ph), formed by the t(9;22) reciprocal chromosome translocation in a haematopoietic stem cell. This chromosome carries the BCR-ABL1 oncogene which encodes the chimeric BCR-ABL1 protein, that lacks the N-terminal cap and has a constitutively active tyrosine kinase domain.

[0004] Although drugs that inhibit the tyrosine kinase activity of BCR-ABL1 via an ATP-competitive mechanism, such as Gleevec® / Glivec® (imatinib), Tasigna® (nilotinib) and Sprycel® (dasatinib), are effective in the treatment of CML, some patients relapse due to the
emergence of drug-resistant clones, in which mutations in the SHI domain compromise inhibitor binding. Although Tasigna® and Sprycel® maintain efficacy towards many Gleevec-resistant mutant forms of BCR-ABL1, the mutation in which the threonine-315 residue is replaced by an isoleucine (T315I) remains insensitive to all three drugs and can result in CML patients developing resistance to therapy. Therefore, inhibiting BCR-ABL1 mutations, such as T315I, remains an unmet medical need. In addition to CML, BCR-ABL1 fusion proteins are causative in a percentage of acute lymphocytic leukemias, and drugs targeting ABL kinase activity also have utility in this indication.

Agents targeting the myristoyl binding site (so-called allosteric inhibitors) have potential for the treatment of BCR-ABL1 disorders (J. Zhang, F. J. Adrian, W. Jahnke, S. W. Cowan-Jacob, A. G. Li, R. E. Iacob4, T. Sim, J. Powers, C. Dierks, F. Sun, G.-R. Guo, Q. Ding, B. Okram, Y. Choi, A. Wojciechowski, X. Deng, G. Liu, G. Fendrich, A. Strauss, N. Vajpai, S. Grzesiek, T. Tuntland, Y. Liu, B. Bursulaya, M. Azam, P. W. Manley, J. R. Engen, G. Q. Daley, M. Warmuth, N. S. Gray. Targeting Bcr-Abl by combining allosteric with ATP-binding-site inhibitors. Nature 2010;463:501-6). To prevent the emergence of drug resistance from ATP inhibitor and/or allosteric inhibitor use, a combination treatment using both types of inhibitor can be developed for the treatment of BCR-ABL1 related disorders. In particular, the need exists for small molecules, or combinations thereof, that inhibit the activity of BCR-ABL1 and BCR-ABL1 mutations via the ATP binding site, the myristoyl binding site or a combination of both sites.

Further, compounds of the invention as inhibitors of ABL1 kinase activity have the potential to be used as therapies for the treatment of metastatic invasive carcinomas and viral infections such as pox and Ebola viruses.

The compounds from the present invention also have the potential to treat or prevent diseases or disorders associated with abnormally activated kinase activity of wild-type Abl, including non-malignant diseases or disorders, such as CNS diseases in particular neurodegenerative diseases (for example Alzheimer's, Parkinson's diseases), motoneuroneuron diseases (amyotrophic lateral sclerosis), muscular dystrophies, autoimmune and inflammatory diseases (diabetes and pulmonary fibrosis), viral infections, prion diseases.
SUMMARY OF THE INVENTION

[0008] In one aspect, the present invention provides compounds of formula (I):

![Chemical Structure](image)

[0009] in which:

[0010] Y at each occurrence is independently selected from N and CH;

[0011] Y1 is selected from N and CR5; wherein R5 is selected from hydrogen, methoxy and imidazolyl; wherein said imidazolyl is unsubstituted or substituted with methyl;

[0012] R1 is a 5 to 9 member heteroaryl ring incorporating one to four nitrogen, oxygen or sulfur atoms, wherein not more than one of the atoms is selected from an oxygen or sulfur; wherein said heteroaryl of R1 is unsubstituted or substituted with 1 to 3 R6 groups;

[0013] R2 is selected from hydrogen, halo, hydroxy, Ci-4alkyl, Ci-4alkoxy, methoxy-carbonyl, 3,6-dihydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl-oxy and cyclobutyl; wherein said Ci-4alkyl, Ci-4alkoxy, cyclobutyl or tetrahydro-2H-pyran-4-yl of R2 can be unsubstituted or substituted with 1 to 3 groups independently selected from halo, hydroxy, cyano, Ci-4alkoxy, morpholino, piperazinyl and NRs6aR6b; wherein R6a is selected from hydrogen and Ci-4alkyl; and R6b is selected from hydroxy-ethyl; wherein said piperazinyl substituent of R2 can be unsubstituted or further substituted with Ci-4alkyl;

[0014] R3 is selected from hydrogen and halo;

[0015] R4 is selected from -SF5 and -Y2 CF2 Y3;

[0016] R6 at each occurrence is independently selected from hydrogen, hydroxy, Ci-4alkyl, Ci-4alkoxy, cyano, trifluoromethyl, halo, amino, methyl-carbonyl, methoxy-carbonyl, cyclopropyl and pyrrolidinyl-methyl; wherein said Ci-4alkyl or Ci-4alkoxy of R6 is unsubstituted or substituted with 1 to 3 groups independently selected from halo and hydroxy;

[0017] Y2 is selected from CF2, O and S(O)02; and

[0018] Y3 is selected from hydrogen, halo, methyl, difluoromethyl and trifluoromethyl;
[0019] Y₄ is selected from N and CR₂;

[0020] Y₅ and Y₆ are independently selected from N, CR₅ or CF; wherein R₅ is selected from hydrogen and halo; with the proviso that when Y₄ is N, Y₅, Y₆ and Y₁ are each CR₅; with the proviso that the compounds of formula I do not include 3-(2-aminoquinazolin-6-yl)-4-methyl-N-(4-(trifluoromethoxy)phenyl)-benzamide and 3-(2-aminoquinazolin-6-yl)-5-bromo-N-(4-(trifluoromethoxy)phenyl)-benzamide.

[0021] In a second aspect, the present invention provides a pharmaceutical composition which contains a compound of formula (I) or aN-oxide derivative, individual isomers and mixture of isomers thereof; or a pharmaceutically acceptable salt thereof, in admixture with one or more suitable excipients.

[0022] In a third aspect, the present invention provides a method of treating a disease in an animal in which modulation of BCR-ABL1 activity can prevent, inhibit or ameliorate the pathology and/or symptomology of the disease, which method comprises administering to the animal a therapeutically effective amount of a compound of formula (I) or a N-oxide derivative, individual isomers and mixture of isomers thereof, or a pharmaceutically acceptable salt thereof.

[0023] In a fourth aspect, the present invention provides the use of a compound of formula (I) in the manufacture of a medicament for treating a disease in an animal in which BCR-ABL1 activity contributes to the pathology and/or symptomology of the disease.

[0024] In a fifth aspect, the present invention provides a process for preparing compounds of formula (I) and the N-oxide derivatives, prodrug derivatives, protected derivatives, individual isomers and mixture of isomers thereof, and the pharmaceutically acceptable salts thereof.

Definitions

[0025] The general terms used hereinbefore and hereinafter preferably have within the context of this disclosure the following meanings, unless otherwise indicated, where more general terms wherever used may, independently of each other, be replaced by more specific definitions or remain, thus defining more detailed embodiments of the invention:

[0026] "Alkyl" refers to a fully saturated branched or unbranched hydrocarbon moiety having up to 20 carbon atoms. Unless otherwise provided, alkyl refers to hydrocarbon moieties
having 1 to 7 carbon atoms (Ci–7 alkyl), or 1 to 4 carbon atoms (Ci–4 alkyl). Representative examples of alkyl include, but are not limited to, methyl, ethyl, n-propyl, 2,4-dimethylpentyl, n-propyl, 2,4-dimethylpentyl, n-propyl, 2,4-dimethylpentyl, 2,3-dimethylpentyl, n-heptyl, n-octyl, n-nonyl, n-decyl and the like. A substituted alkyl is an alkyl group containing one or more, such as one, two or three substituents selected from halogen, hydroxy or alkoxy groups. Halo-substituted-alkyl and halo-substituted-alkoxy, can be either straight-chained or branched and includes, methoxy, ethoxy, difluoromethyl, trifluoromethyl, pentafluoroethyl, difluoromethoxy, trifluoromethoxy, and the like.

"Aryl" means a monocyclic or fused bicyclic aromatic ring assembly containing six to ten ring carbon atoms. For example, aryl may be phenyl or naphthyl, preferably phenyl.

"Arylene" means a divalent radical derived from an aryl group.

"BCR-ABL1" refers to a fusion protein created from the N-terminal exons of the breakpoint cluster region (BCR) gene and the major C-terminal part (exons 2-11) of the Abelson (ABL) gene. The most common fusion transcripts encode for a 210-kDa protein (p210 BCR-ABL1), although rarer transcripts encode a 190-kDa protein (p190 BCR-ABL1) and a 230-kDa protein (p230 BCR-ABL1). The ABL1 sequences of these proteins contains an ABL1 tyrosine kinase domain which is tightly regulated in the wild-type protein, but constitutively activated in the BCR-ABL1 fusion proteins. This deregulated tyrosine kinase interacts with multiple cellular signalling pathways leading to transformation and deregulated proliferation of the cells.

"BCR-ABL1 mutants" refers to the numerous single site mutations in BCR-ABL1 including: Glu255→Lys, Glu255→Valine, Thr315→Isoleucine, Met244→Val, Phe317→Leu, Leu248→Val, Met343→Thr, Gly250→Ala, Met351→Thr, Gly250→Glu, Glu355→Gly, Gln252→His, Phe358→Ala, Gln252→Arg, Phe359→Val, Tyr253→His, Val379→Ile, Tyr253→Phe, Phe382→Leu, Glu255→Lys, Leu387→Met, Glu255→Val, His396→Pro, Phe311→Ile, His396→Arg, Phe311→Leu, Ser417→Tyr, Thr315→Ile, Glu459→Lys and Phe486→Ser.

"c-ABL" refers to the full length gene product of the non-mutated wild-type ABL1.
"Heteroaryl" is as defined for aryl above where one or more of the ring members is a heteroatom. For example Cs-ioheteroaryl is a minimum of 5 members as indicated by the carbon atoms but that these carbon atoms can be replaced by a heteroatom. Consequently, C₅₁₀heteroaryl includes pyridyl, indolyl, indazolyl, quinoxalinyl, quinolinyl, benzofuranyl, benzopyranyl, benzothiopyranyl, benzo[1,3]dioxole, imidazolyl, benzo-imidazolyl, pyrimidinyl, furanyl, oxazolyl, isoxazolyl, triazolyl, tetrazolyl, pyrazolyl, thienyl, etc.

"Cycloalkyl" means a saturated or partially unsaturated, monocyclic, fused bicyclic or bridged polyeyleic ring assembly containing the number of ring atoms indicated. For example, C₃_iocycloalkyl includes cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, etc.

"Heterocycloalkyl" means cycloalkyl, as defined in this application, provided that one or more of the ring carbons indicated are replaced by a moiety selected from -O-, -N=, -NR-, -C(O)-, -S-, -S(O) - or -S(O)₂-, wherein R is hydrogen, C₁₋₄alkyl or a nitrogen protecting group. For example, Cs-sheterocycloalkyl as used in this application to describe compounds of the invention includes morpholino, pyrrolidinyl, pyrrolidinyl-2-one, piperazinyl, piperidinyl, piperidinylone, 1,4-dioxo-8-aza-spiro[4.5]dec-8-yl, thiomorpholino, sulfanomorpholino, sulfonomorpholino, etc.

"Halogen" (or halo) preferably represents chloro or fluoro, but may also be bromo or iodo.

Compounds of formula I may have different isomeric forms. For example, any asymmetric carbon atom may be present in the (R)-, (S)- or (R,S)-configuration, preferably in the (R)- or (S)-configuration. Substituents at a double bond or especially a ring may be present in cis- (= Z-) or trans (= E-) form. The compounds may thus be present as mixtures of isomers or preferably as pure isomers, preferably as pure diastereomers or pure enantiomers.

Where the plural form (e.g. compounds, salts) is used, this includes the singular (e.g. a single compound, a single salt). "A compound" does not exclude that (e.g. in a pharmaceutical formulation) more than one compound of the formula I (or a salt thereof) is present, the "a" merely representing the indefinite article. "A" can thus preferably be read as "one or more", less preferably alternatively as "one".
Wherever a compound or compounds of the formula I are mentioned, this is further also intended to include N-oxides of such compounds and/or tautomers thereof.

The term "and/or an N-oxide thereof, a tautomer thereof and/or a (preferably pharmaceutically acceptable) salt thereof" especially means that a compound of the formula I may be present as such or in mixture with its N-oxide, as tautomer (e.g. due to keto-enol, lactam-lactim, amide-imidic acid or enamine-imine tautomerism) or in (e.g. equivalency reaction caused) mixture with its tautomer, or as a salt of the compound of the formula I and/or any of these forms or mixtures of two or more of such forms.

The present invention also includes all suitable isotopic variations of the compounds of the invention, or pharmaceutically acceptable salts thereof. An isotopic variation of a compound of the invention or a pharmaceutically acceptable salt thereof is defined as one in which at least one atom is replaced by an atom having the same atomic number but an atomic mass different from the atomic mass usually found in nature. Examples of isotopes that may be incorporated into the compounds of the invention and pharmaceutically acceptable salts thereof include, but are not limited to, isotopes of hydrogen, carbon, nitrogen and oxygen such as as $^3$H (D or deuterium), $^3$H, $^11$C, $^1^3$C, $^1^4$C, $^1^5$N, $^{1^7}$O, $^{1^8}$O, $^{3^5}$S, $^{1^8}$F, $^{3^6}$Cl and $^{1^2}$I. Certain isotopic variations of the compounds of the invention and pharmaceutically acceptable salts thereof, for example, those in which a radioactive isotope such as $^3$H or $^{1^4}$C is incorporated, are useful in drug and/or substrate tissue distribution studies. In particular examples, $^3$H and $^{1^4}$C isotopes may be used for their ease of preparation and detectability. In other examples, substitution with isotopes such as $^3$H may afford certain therapeutic advantages resulting from greater metabolic stability, such as increased in vivo half-life or reduced dosage requirements. Isotopic variations of the compounds of the invention or pharmaceutically acceptable salts thereof can generally be prepared by conventional procedures using appropriate isotopic variations of suitable reagents.

Description of Preferred Embodiments

The present invention relates to compounds capable of inhibiting the activity of BCR-ABL1 or mutants of BCR-ABL1 through the allosteric, myristoyl binding site.
In one embodiment, with respect to compounds of the invention, are compounds of formula (la):

![Chemical Structure](image)

in which: Y at each occurrence is independently selected from N and CH; Y₁ is selected from N and CR₅; wherein R₅ is selected from hydrogen, methoxy and imidazolyl; wherein said imidazolyl is unsubstituted or substituted with methyl; R₁ is a selected from pyrimidinyl, pyridinyl, pyrazinyl, thienyl, pyrrolidinyl, imidazolyl, thiazolyl, pyrazolyl and benzo[d][1,3]dioxol-5-yl; wherein said pyrimidinyl, pyridinyl, pyrazinyl, thienyl and pyrazolyl of R₁ is unsubstituted or substituted with a group selected from cyano, methyl, halo, hydroxy, hydroxy-ethyl, methyl-carbonyl, methoxy, hydroxy-ethoxy, amino, methoxy-carbonyl and pyrrolidinyl-methyl; R₂ is selected from hydrogen, halo, hydroxy, Cᵢ₄alkyl, Cᵢ₄alkoxy, methoxy-carbonyl, 3,6-dihydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl-oxo and cyclobutyl; wherein said Cᵢ₄alkyl, Cᵢ₄alkoxy, cyclobutyl or tetrahydro-2H-pyran-4-yl of R₂ can be unsubstituted or substituted with 1 to 3 groups independently selected from halo, hydroxy, cyano, Cᵢ₄alkoxy, morpholino, piperazinyl and NR₅αR₅β; wherein R₅α is selected from hydrogen and Cᵢ₄alkyl; and R₅β is selected from hydroxy-ethyl; wherein said piperazinyl substituent of R₂ can be unsubstituted or further substituted with Cᵢ₄alkyl; R₄ is selected from -SF₅ and -Y₂-CF₂-Y₃; R₆ at each occurrence is independently selected from hydrogen, hydroxy, Cᵢ₄alkyl, Cᵢ₄alkoxy, cyano, trifluoromethyl, halo, amino, methyl-carbonyl, methoxy-carbonyl, cyclopropyl and pyrrolidinyl-methyl; wherein said Cᵢ₄alkyl or Cᵢ₄alkoxy of R₆ is unsubstituted or substituted with 1 to 3 groups independently selected from halo and hydroxy; Y₂ is selected from CF₂, O and S(0)O-2; and Y₃ is selected from hydrogen, halo, methyl, difluoromethyl and trifluoromethyl; Y₄ is selected from N and CR₅; Y₅ and Y₆ are independently selected from N, CR₅ or CF; wherein R₅ is selected from hydrogen and halo; with the proviso that when Y₄ is N, Y₅, Y₆ and Y₁ are each CR₅; or the pharmaceutically acceptable salts thereof.
In another embodiment are compounds in which Y is CH; and R₂ is selected from hydrogen, halo and methyl.

In a further embodiment are compounds in which R₃ is hydrogen and R₄ is selected from trifluoro-methoxy, trifluoro-methyl-thio and chloro-difluoro-methoxy.

In a further embodiment are compounds selected from:

In another embodiment are compounds in which: $Y$ is CH; and $R_2$ is selected from hydroxy, C\(^{\text{alkoxy}}\), methoxy-carbonyl, 3,6-dihydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl-oxy and cyclobutyl; wherein said $\text{C}_1$-$\text{C}_4$ alkoxy, cyclobutyl or tetrahydro-2H-pyran-4-yl of $R_2$ can be unsubstituted or substituted with 1 to 3 groups independently selected from halo, hydroxy, cyano, C\(^{\text{alkoxy}}\), morpholino, piperazinyl and NR\(_a\)R\(_b\); wherein R\(_a\) is
selected from hydrogen and C<sub>1-4</sub> alkyl; and R<sub>b</sub> is selected from hydroxy-ethyl; wherein said piperazinyl substituent of R<sub>2</sub> can be unsubstituted or further substituted with C<sub>i-4</sub>alkyl.

[0047] In a further embodiment are compounds in which: R<sub>2</sub> is selected from methoxy, ethoxy, morpholino-ethoxy, hydroxy-ethoxy, pyrrolidinyl-ethoxy, hydroxy, methoxy-ethoxy, (hydroxy-ethyl)amino-ethoxy, (tetrahydro-2H-pyran-4-yl)oxy and piperazinyl-ethoxy; wherein said piperazinyl-ethoxy is unsubstituted or substituted with isobutyl.

[0048] In a further embodiment are compounds in which: R<sub>3</sub> is hydrogen and R<sub>4</sub> is selected from trifluoro-methoxy and chloro-difluoro-methoxy.

[0049] In a further embodiment are compounds selected from:
On the basis of the inhibitory studies described in the "Assay" section below, a compound of formula (I) according to the invention shows therapeutic efficacy especially against disorders dependent on BCR-ABL1 activity. In particular, compounds of the present invention
inhibit the allosteric or myristoyl binding site of BCR-ABL1 (including wild-type BCR-ABL1 and/or mutations thereof).

Combining an ATP-competitive inhibitor of BCR-ABL1 with an allosteric inhibitor of BCR-ABL1 delays acquired resistance in BCR-ABL1+KCL-22 cells, in vitro.

Surprisingly, BCR-ABL1+KCL-22 cells treated every 3-4 days with a compound of the invention showed an acquired resistance after approximately 28 days whereas these same cells treated every 3-4 days with nilotinib or dasatinib showed an acquired resistance after only 18-21 days. Even more surprisingly, when BCR-ABL1+KCL-22 cells were treated every 3-4 days with a combination of a compound of the invention and either nilotinib or dasatinib, no acquired resistance was observed in at least the first 60 days. Therefore, myristoyl-binding site compounds of the present invention, in combination with BCR-ABL1 inhibitors that bind to the ATP binding site are especially important for the treatment of proliferative diseases involving upregulation of ABL1 kinase activity, as in the case of BCR-ABL1 fusion proteins in CML and subsets of other haematological malignancies such as ALL and AML.

Carcinoma cells utilize invapodia to degrade the extra cellular matrix during tumor invasion and metastasis. ABL kinase activity is required for Src-induced invapodia formation, regulating distinct stages of invapodia assembly and function. The compounds of the invention, therefore, as inhibitors of ABL, have the potential to be used as therapies for the treatment of metastatic invasive carcinomas.

plasma (Leis JF, Stepan DE, Curtin PT, Ford JM, Peng B, Schubach S, Druker BJ, Maziarz RT.
Central nervous system failure in patients with chronic myelogenous leukemia lymphoid blast crisis
and Philadelphia chromosome positive acute lymphoblastic leukemia treated with imatinib (STI-571).
Leuk Lymphoma. 2004 Apr;45(4):695-8). Therefore, c-ABL inhibitors from the present invention
which show a high brain exposure represent a valid approach for development of therapies against
CML including CNS-CML.

Compounds of the invention can be useful in the treatment of viruses. For
example, viral infections can be mediated by ABL1 kinase activity, as in the case of pox-viruses
and the Ebola virus. Gleevec® and Tasigna® have been shown to stop the release of Ebola viral
particles from infected cells, in vitro (Kalman, Daniel; Bornmann, William Gerard, Methods of
use of non-ATP competitive tyrosine kinase inhibitors to treat pathogenic infection, PCT Int.
Appl. 2007, WO 2007002441; Garcia Mayra; Cooper Arik; Shi Wei; Bornmann William; Carrion
Ricardo; Kalman Daniel; Nabel Gary J. Productive Replication of Ebola Virus Is Regulated by the
c-ABL1 Tyrosine Kinase. Science translational medicine 2012;4:123ra24). Compounds of the
present invention that inhibit c-ABL kinase, therefore, can be expected to reduce the pathogen's
ability to replicate.

Compounds of the invention can also be useful in the treatment of neural
degeneration. While native c-ABL tyrosine kinase remains relatively quiescent in healthy adult
brain, it can be activated in the brain of patients with CNS diseases, including neurodegenerative
diseases such as, Alzheimer's disease (AD), Parkinson's disease (AD), frontotemporal dementia
(FTD), Picks disease, Niemann-Pick type C disease (NPC) and other degenerative, inflammatory
and autoimmune diseases and ageing.

Parkinson's disease is the second most prevalent chronic neurodegenerative
disease with the most common familial autosomal-recessive form being caused by mutations in
the E3 ubiquitin ligase, parkin. Recent studies showed that activated c-ABL was found in the
striatum of patients with sporadic Parkinson's disease. Concomitantly, parkin was tyrosine-
phosphorylated, causing loss of its ubiquitin ligase and cytoprotective activities as indicated by
the accumulation of parkin substrates (Ko HS, Lee Y, Shin JH, Karuppagounder SS, Gadad BS,
Koleske AJ, Pletnikova O, Troncoso JC, Dawson VL, Dawson TM. Phosphorylation by the c-ABL protein tyrosine kinase inhibits parkin's ubiquitination and protective function. Proc Natl Acad Sci U S A. 2010 Sep 21;107(38): 16691-6; Imam SZ, Zhou Q, Yamamoto A, Valente AJ, Ali SF, Bains M, Roberts JL, Kahle PJ, Clark RA, Li S. Novel regulation of parkin function through c-ABL-mediated tyrosine phosphorylation: implications for Parkinson's disease. J Neurosci. 2011 Jan 5;31(1): 157-63. These two studies also showed that in cell or animal models of Parkinson's disease, pharmacological inhibition of c-ABL kinase or genetic ABL knockdown prevented tyrosine phosphorylation of parkin and restored its E3 ligase activity and cytoprotective function both in vitro and in vivo. These results indicate that c-ABL-dependent tyrosine phosphorylation of parkin is a major post-translational modification that leads to loss of parkin function and disease progression in sporadic PD. Therefore, the ability of compounds of the invention to inhibit the myristate-binding site of ABL1, can be expected to offer new therapeutic opportunities for blocking the progression of Parkinson's disease.

Alzheimer's disease is characterized by two main hallmarks: extracellular deposits of the neurotoxic amyloid-β which leads to amyloid plaque development, and intracellular accumulation of hyperphosphorylated tau which contributes to the development of neurofibrillary tangles (NFTs).

Amyloid-β level is reduced following intrathecal treatment with Gleevec® in the brain of wild-type guinea-pigs and in cell models (Netzer WJ, Dou F, Cai D, Veach D, Jean S, Li Y, Bormann WG, Clarkson B, Xu H, Greengard P. Gleevec inhibits beta-amyloid production but not Notch cleavage. Proc Natl Acad Sci U S A. 2003 Oct 14;100(21): 12444-9). The same group proposed that Gleevec® achieves its amyloid-P-lowering effect via a new mechanism preventing GSAP interaction with the gamma-secretase substrate, APP-CTF (He G, Luo W, Li P, Remmers C, Netzer WJ, Hendrick J, Bettayeb K, Flajolet M, Gorelick F, Wennogle LP, Greengard P. Gamma-secretase activating protein is a therapeutic target for Alzheimer's disease. Nature. 2010 Sep 2;467(7311):95-8). In this study, Gleevec®'s effect to inhibit GSAP/APP-CTF was only seen at micromolar concentrations. Another group showed that tyrosine phosphorylation of the intracellular domain of APP (i.e. Tyr682) regulates the amyloidogenic APP processing accelerating amyloid-β
formation in vivo (Barbagallo AP, Weldon R, Tamayev R, Zhou D, Giliberto L, Foreman O, 
DAdamio L. Tyr(682) in the intracellular domain of APP regulates amyloidogenic APP processing in vivo. PLoS One. 2010 Nov 16;5(1):el5503). Other studies showed that APP is tyrosine-
phosphorylated in cells expressing a constitutively active form of the ABL oncogene (Zambrano N, 
precursor protein APP is tyrosine-phosphorylated in cells expressing a constitutively active form of 
the ABL protoncogene. J Biol Chem. 2001 Jun 8;276(23): 19787-92). These data together suggest a c-
ABL-dependent amyloidogenic APP processing for the formation of the toxic amyloid-β peptide and 
subsequent amyloid plaques. Therefore a c-ABL inhibitor would be expected to lower amyloid 
plaque formation in Alzheimer's patients.

[0060] Tau has been shown to be phosphorylated by c-ABL kinase at tyrosines 18, 197, 310, 
and 394 in cell models, and tau pY394 has been shown to be present in the lesions NFTs in the brain 
of AD patients.

[0061] c-ABL is activated in the brain of patients with sporadic Alzheimer's disease as 
shown by its phosphorylation either at Y412, an indicator of activation, which co-localizes 
granulovacuolar degeneration, or at T735 which co-localized with the typical lesions, amyloid 
plaques, neurofibrillary tangles (NFTs) in addition to GVD. Amyloid-β and oxidative stress activate 
c-ABL kinase in neuronal cultures and intracerebral injection of fibrillar amyloid peptide leads to 
increased expression of c-ABL and a downstream effector p73. Transgenic mice (APP/Swe mouse 
model of AD), showed higher levels of c-ABL in their brain and, when these mice were treated with 
the c-ABL inhibitor Gleevec®, tau phosphorylation was decreased in their brains. A transgenic mouse 
model expressing constitutively active c-ABL in forebrain neurons exhibited neuronal loss, severe 
neuroinflammation, and tyrosine phosphorylation of tau in the brain (For review, see Schlatterer SD, 

[0062] Based on all these results, evidence exists for a role for c-ABL kinase in Alzheimer's 
pathogenesis for development of both lesions, amyloid plaques and neurofibrillary tangles.

[0063] Further, activated c-ABL is also present in other tauopathies besides sporadic 
Alzheimer's including in the brain of patients with frontotemporal dementia with N279K and P301L

Therefore, compounds of the present invention, by inhibiting c-ABL in the CNS, represent a valid approach for development of therapies against Alzheimer's disease, as well as other β-amyloidoses, such as vascular dementia and other tauopathies, such as frontotemporal dementia and Pick's disease.

Nieman-Pick type C (NPC) disease is a fatal autosomal recessive disorder characterized by the accumulation of free cholesterol and glycosphingolipids in the endosomal-lysosomal system, and by a progressive neuronal death in particular of cerebellar Purkinje neurons. In a mouse model of NPC, the proapoptotic c-ABL, the downstream target as well as p73 target genes are expressed in the cerebellums. Inhibition of c-ABL with Gleevec® prevented from loss of Purkinje neurons, improved neurological symptoms, and increased the survival. This prosurvival effect of Gleevec® correlated with reduced mRNA levels of p73 proapoptotic target genes (Alvarez AR, Klein A, Castro J, Cancino GI, Amigo J, Mosquera M, Vargas LM, Yevenes LF, Bronfman FC, Zanlungo S. Imatinib therapy blocks cerebellar apoptosis and improves neurological symptoms in a mouse model of Niemann-Pick type C disease. FASEB J. 2008 Oct;22(10):3617-27). Therefore, compounds of the present invention, by inhibiting c-ABL kinase, represent a valid approach for the development of therapies against diseases caused by the proapoptotic c-ABL/p73 pathway, such as NPC.

X-linked recessive Emery-Dreifuss muscular dystrophy is caused by mutations of emeriti, a nuclear-membrane protein with roles in nuclear architecture, gene regulation and signaling. A recent study has shown that emeriti is tyrosine-phosphorylated directly by c-ABL in cell models, and that the phosphorylation status of emerin changes emeriti binding to other proteins such as BAF. This, in turn, may explain the mislocalization of mutant emerin from nuclear to cytosolic compartments and consequently changes in downstream effector and signal integrator for signaling pathway(s) at the nuclear envelope (Tiffit KE, Bradbury KA, Wilson KL. Tyrosine phosphorylation of nuclear-membrane protein emerin by Src, ABL and other kinases. J Cell Sci. 2009 Oct 15;122(Pt 20):3780-90). Changes in emerin-lamin interactions during both mitosis and interphase are of relevance for the pathology of muscular dystrophies. In addition, results from another study demonstrate that Gleevec® attenuates skeletal muscle dystrophy in mdx mice (Huang P, Zhao XS, Fields M, Ransohoff RM, Zhou L. Imatinib attenuates skeletal muscle dystrophy in mdx mice. FASEB J. 2009 Aug;23(8):2539-48).

Therefore, novel c-ABL inhibitors from the present invention also represent therapeutic approaches for treatment of skeletal and muscular dystrophies.

Furthermore, c-ABL kinase plays a role in inflammation and oxidative stress, two mechanisms that are implicated in a variety of human diseases ranging from acute CNS diseases, such as stroke and traumatic brain or spinal cord injuries, chronic CNS diseases, such as Alzheimer's, Parkinson's, Huntington's and motoneuron diseases, to non-CNS inflammatory and autoimmune diseases, such as diabetes, pulmonary fibrosis.

imatinib and nilotinib attenuated bleomycin-induced acute lung injury and pulmonary fibrosis in mice (Rhee CK, Lee SH, Yoon HK, Kim SC, Lee SY, Kwon SS, Kim YK, Kim KH, Kim TJ, Kim JW. Effect of nilotinib on bleomycin-induced acute lung injury and pulmonary fibrosis in mice. Respiration. 201 1;82(3):273-87). Although in these studies the authors were focusing on the implication the mechanism related to PDGFRs, of interest, in the study by Rhee et al. (Respiration. 201 1;82(3):273-87), nilotinib which is a more potent c-ABL inhibitor than imatinib showed superior therapeutic antifibrotic effects, thus supporting the therapeutic applicability of c-ABL inhibitors for treatment of human diseases with pulmonary inflammation. In another study, exposure of mice to hyperoxia increased c-ABL activation which is required for dynam 2 phosphorylation and reactive oxygen species production and pulmonary leak (Singleton PA, Pendyala S, Gorshkova IA, Mambetsariev N, Moitra J, Garcia JG, Natarajan V. Dynamin 2 and c-ABL are novel regulators of hyperoxia-mediated NADPH oxidase activation and reactive oxygen species production in caveolin-enriched microdomains of the endothelium. J Biol Chem. 2009 Dec 11;284(50):34964-75).

Therefore, these data indicate that new c-ABL inhibitors from the present invention have therapeutic applicability for treatment of human diseases with pulmonary inflammation.

Therefore, the new c-ABL inhibitors from the present invention have therapeutic applicability for treatment of human diabetes.
A c-ABL inhibitor from the present invention can be used in combination with one or more of the existing treatment for the above diseases: for example a c-ABL inhibitor from the present invention can be used in combination with Levodopa or other L-DOPA-containing medicaments or a dopamine agonist for the treatment of Parkinson's disease or in combination with a cholinesterase inhibitor such as Exelon capsule or transdermal patch for the treatment of Alzheimer's disease.

In chronic myelogenous leukemia (CML), a reciprocal balanced chromosomal translocation in hematopoietic stem cells (HSCs) produces the BCR-ABL1 hybrid gene. The latter encodes the oncogenic BCR-ABL1 fusion protein. Whereas ABL encodes a tightly regulated protein tyrosine kinase, which plays a fundamental role in regulating cell proliferation, adherence and apoptosis, the BCR-ABL1 fusion gene encodes as constitutively activated kinase. This activated kinase transforms HSCs to produce a phenotype exhibiting deregulated clonal proliferation, reduced capacity to adhere to the bone marrow stroma and a reduced apoptotic response to mutagenic stimuli, resulting in progressively more malignant transformations. The resulting granulocytes fail to develop into mature lymphocytes and are released into the circulation, leading to a deficiency in the mature cells and increased susceptibility to infection. ATP-competitive inhibitors of BCR-ABL1 have been demonstrated to prevent the kinase from activating mitogenic and anti-apoptotic pathways (for example, P-3 kinase and STAT5), leading to the death of the BCR-ABL1 phenotype cells and thereby providing an effective therapy against CML. The compounds of the invention, as BCR-ABL1 inhibitors, including mutants thereof, are thus especially appropriate for the therapy of diseases related to its over-expression, such as ALL or CML leukemias.

Compounds of the invention have also been demonstrated to have anti-tumor activity, in vivo: The in vivo antitumor activity is tested, for example using leukemic cell lines such as Ba/F3-BCR-ABL1, KCL-22, K-562, MEG-01, KYO-1, LAMA-84, KU812, EM-2, CML-T1, BV-173, or ALL-SIL.
The present invention includes a method to treat cancer, comprising administering to a subject in need of such treatment an effective amount of a compound of the invention or a pharmaceutical composition.

A further embodiment comprises administering to the subject an additional therapeutic agent.

In a further embodiment, the additional therapeutic agent is a different BCR-ABL1 inhibitor selected from imatinib, nilotinib, dasatinib, dosutinib, ponatinib and bafetinib.

In another embodiment is a method to treat a condition mediated by BCR-ABL1, comprising administering to a subject in need thereof an effective amount of a compound of the invention or a pharmaceutical composition.

In a further embodiment, the BCR-ABL1 contains one or more mutations (UJane F. Apperley. Part 1: Mechanism of resistance to imatinib in chronic myeloid leukaemia. Lancet Oncology 2007;8:1018). Examples of such mutations include V299L, T315I, F317I, F317L, Y253F, Y253H, E255K, E255V, F359C and F359V.

In certain embodiments, the present invention relates to the aforementioned method, wherein said compound is administered parenterally.

In certain embodiments, the present invention relates to the aforementioned method, wherein said compound is administered intramuscularly, intravenously, subcutaneously, orally, pulmonary, intrathecally, topically or intranasally.

In certain embodiments, the present invention relates to the aforementioned method, wherein said compound is administered systemically.

In certain embodiments, the present invention relates to the aforementioned method, wherein said patient is a mammal.

In certain embodiments, the present invention relates to the aforementioned method, wherein said patient is a primate.

In certain embodiments, the present invention relates to the aforementioned method, wherein said patient is a human.
In another aspect, the present invention relates to a method of treating an ABL1/BCR-ABL1-mediated disorder, comprising the step of: administering to a patient in need thereof a therapeutically effective amount of a chemotherapeutic agent in combination with a therapeutically effective amount of a compound of compound of formula (I) as defined in the Summary of the Invention.

In another aspect, the present invention relates to a method of treating a ABL1/BCR-ABL1-mediated disorder, comprising the step of: administering to a patient in need thereof a therapeutically effective amount of a chemotherapeutic agent in combination with a therapeutically effective amount of a compound of compound of formula (I).

Pharmaceutical Compositions

In another aspect, the present invention provides pharmaceutically acceptable compositions which comprise a therapeutically-effective amount of one or more of the compounds described above, formulated together with one or more pharmaceutically acceptable carriers (additives) and/or diluents. As described in detail below, the pharmaceutical compositions of the present invention may be specially formulated for administration in solid or liquid form, including those adapted for the following: (1) oral administration, for example, drenches (aqueous or non-aqueous solutions or suspensions), tablets, e.g., those targeted for buccal, sublingual, and systemic absorption, boluses, powders, granules, pastes for application to the tongue; (2) parenteral administration, for example, by subcutaneous, intramuscular, intravenous or epidural injection as, for example, a sterile solution or suspension, or sustained-release formulation; (3) topical application, for example, as a cream, ointment, or a controlled-release patch or spray applied to the skin; (4) intravaginally or intrarectally, for example, as a pessary, cream or foam; (5) sublingually; (6) ocularly; (7) transdermally; (8) nasally; (9) pulmonary; or (10) intrathecally.

The phrase "therapeutically-effective amount" as used herein means that amount of a compound, material, or composition comprising a compound of the present invention which is effective for producing some desired therapeutic effect in at least a sub-population of cells in an animal at a reasonable benefit/risk ratio applicable to any medical treatment.
The phrase "pharmaceutically acceptable" is employed herein to refer to those compounds, materials, compositions, and/or dosage forms which are, within the scope of sound medical judgment, suitable for use in contact with the tissues of human beings and animals without excessive toxicity, irritation, allergic response, or other problem or complication, commensurate with a reasonable benefit/risk ratio.

The phrase "pharmaceutically-acceptable carrier" as used herein means a pharmaceutically-acceptable material, composition or vehicle, such as a liquid or solid filler, diluent, excipient, manufacturing aid (e.g., lubricant, talc magnesium, calcium or zinc stearate, or steric acid), or solvent encapsulating material, involved in carrying or transporting the subject compound from one organ, or portion of the body, to another organ, or portion of the body. Each carrier must be "acceptable" in the sense of being compatible with the other ingredients of the formulation and not injurious to the patient. Some examples of materials which can serve as pharmaceutically-acceptable carriers include: (1) sugars, such as lactose, glucose and sucrose; (2) starches, such as corn starch and potato starch; (3) cellulose, and its derivatives, such as sodium carboxymethyl cellulose, ethyl cellulose and cellulose acetate; (4) powdered tragacanth; (5) malt; (6) gelatin; (7) talc; (8) excipients, such as cocoa butter and suppository waxes; (9) oils, such as peanut oil, cottonseed oil, safflower oil, sesame oil, olive oil, corn oil and soybean oil; (10) glycols, such as propylene glycol; (11) polyols, such as glycerin, sorbitol, mannitol and polyethylene glycol; (12) esters, such as ethyl oleate and ethyl laurate; (13) agar; (14) buffering agents, such as magnesium hydroxide and aluminum hydroxide; (15) alginic acid; (16) pyrogen-free water; (17) isotonic saline; (18) Ringer's solution; (19) ethyl alcohol; (20) pH buffered solutions; (21) polyesters, polycarbonates and/or polyanhydrides; and (22) other non-toxic compatible substances employed in pharmaceutical formulations.

As set out above, certain embodiments of the present compounds may contain a basic functional group, such as amino or alkylamino, and are, thus, capable of forming pharmaceutically-acceptable salts with pharmaceutically-acceptable acids. The term "pharmaceutically-acceptable salts" in this respect, refers to the relatively non-toxic, inorganic and organic acid addition salts of compounds of the present invention. These salts can be prepared in
situ in the administration vehicle or the dosage form manufacturing process, or by separately reacting a purified compound of the invention in its free base form with a suitable organic or inorganic acid, and isolating the salt thus formed during subsequent purification. Representative salts include the hydrobromide, hydrochloride, sulfate, bisulfate, phosphate, nitrate, acetate, valerate, oleate, palmitate, stearate, laurate, benzoate, lactate, phosphate, tosylate, citrate, maleate, fumarate, succinate, tartrate, naphylate, mesylate, glucoheptonate, lactobionate, and laurylsulphonate salts and the like. (See, for example, Berge et al. (1977) "Pharmaceutical Salts", J. Pharm. Sci. 66:1-19).

[0095] The pharmaceutically acceptable salts of the subject compounds include the conventional nontoxic salts or quaternary ammonium salts of the compounds, e.g., from non-toxic organic or inorganic acids. For example, such conventional nontoxic salts include those derived from inorganic acids such as hydrochloride, hydrobromic, sulfuric, sulfamic, phosphoric, nitric, and the like; and the salts prepared from organic acids such as acetic, propionic, succinic, glycolic, stearic, lactic, malic, tartaric, citric, ascorbic, palmitic, maleic, hydroxymaleic, phenylacetic, glutamic, benzoic, salicylic, sulfanilic, 2-acetoxybenzoic, fumaric, toluenesulfonic, methanesulfonic, ethane disulfonic, oxalic, isotheionic, and the like.

[0096] In other cases, the compounds of the present invention may contain one or more acidic functional groups and, thus, are capable of forming pharmaceutically-acceptable salts with pharmaceutically-acceptable bases. The term "pharmaceutically-acceptable salts" in these instances refers to the relatively non-toxic, inorganic and organic base addition salts of compounds of the present invention. These salts can likewise be prepared in situ in the administration vehicle or the dosage form manufacturing process, or by separately reacting the purified compound in its free acid form with a suitable base, such as the hydroxide, carbonate or bicarbonate of a pharmaceutically-acceptable metal cation, with ammonia, or with a pharmaceutically-acceptable organic primary, secondary or tertiary amine. Representative alkali or alkaline earth salts include the lithium, sodium, potassium, calcium, magnesium, and aluminum salts and the like. Representative organic amines useful for the formation of base addition salts
include ethylamine, diethylamine, ethylenediamine, ethanolamine, diethanolamine, piperazine and the like. (See, for example, Berge et al., supra)

Wetting agents, emulsifiers and lubricants, such as sodium lauryl sulfate and magnesium stearate, as well as coloring agents, release agents, coating agents, sweetening, flavoring and perfuming agents, preservatives and antioxidants can also be present in the compositions.

Examples of pharmaceutically-acceptable antioxidants include: (1) water soluble antioxidants, such as ascorbic acid, cysteine hydrochloride, sodium bisulfate, sodium metabisulfite, sodium sulfite and the like; (2) oil-soluble antioxidants, such as ascorbyl palmitate, butylated hydroxyanisole (BHA), butylated hydroxytoluene (BHT), lecithin, propyl gallate, alphatocopherol, and the like; and (3) metal chelating agents, such as citric acid, ethylenediamine tetraacetic acid (EDTA), sorbitol, tartaric acid, phosphoric acid, and the like.

Formulations of the present invention include those suitable for oral, nasal, topical (including buccal and sublingual), rectal, vaginal and/or parenteral administration. The formulations may conveniently be presented in unit dosage form and may be prepared by any methods well known in the art of pharmacy. The amount of active ingredient which can be combined with a carrier material to produce a single dosage form will vary depending upon the host being treated, the particular mode of administration. The amount of active ingredient which can be combined with a carrier material to produce a single dosage form will generally be that amount of the compound which produces a therapeutic effect. Generally, out of one hundred percent, this amount will range from about 0.1 per cent to about ninety-nine percent of active ingredient, preferably from about 5 per cent to about 70 per cent, most preferably from about 10 percent to about 30 percent.

In certain embodiments, a formulation of the present invention comprises an excipient selected from the group consisting of cyclodextrins, cellulosics, liposomes, micelle forming agents, e.g., bile acids, and polymeric carriers, e.g., polyesters and polyanhydrides; and a compound of the present invention. In certain embodiments, an aforementioned formulation renders orally bioavailable a compound of the present invention.
Methods of preparing these formulations or compositions include the step of bringing into association a compound of the present invention with the carrier and, optionally, one or more accessory ingredients. In general, the formulations are prepared by uniformly and intimately bringing into association a compound of the present invention with liquid carriers, or finely divided solid carriers, or both, and then, if necessary, shaping the product.

Formulations of the invention suitable for oral administration may be in the form of capsules, cachets, pills, tablets, lozenges (using a flavored basis, usually sucrose and acacia or tragacanth), powders, granules, or as a solution, suspension or solid dispersion in an aqueous or non-aqueous liquid, or as an oil-in-water or water-in-oil liquid emulsion, or as an elixir or syrup, or as pastilles (using an inert base, such as gelatin and glycerin, or sucrose and acacia) and/or as mouth washes and the like, each containing a predetermined amount of a compound of the present invention as an active ingredient. A compound of the present invention may also be administered as a bolus, electuary or paste.

In solid dosage forms of the invention for oral administration (capsules, tablets, pills, dragees, powders, granules, trouchés and the like), the active ingredient is mixed with one or more pharmaceutically-acceptable carriers, such as sodium citrate or dicalcium phosphate, and/or any of the following: (1) fillers or extenders, such as starches, lactose, sucrose, glucose, mannitol, and/or silicic acid; (2) binders, such as, for example, carboxymethylcellulose, alginates, gelatin, polyvinyl pyrrolidone, sucrose and/or acacia; (3) humectants, such as glycerol; (4) disintegrating agents, such as agar-agar, calcium carbonate, potato or tapioca starch, alginic acid, certain silicates, and sodium carbonate; (5) solution retarding agents, such as paraffin; (6) absorption accelerators, such as quaternary ammonium compounds and surfactants, such as poloxamer and sodium lauryl sulfate; (7) wetting agents, such as, for example, cetetyl alcohol, glycerol monostearate, and non-ionic surfactants; (8) absorbents, such as kaolin and bentonite clay; (9) lubricants, such as talc, calcium stearate, magnesium stearate, solid polyethylene glycols, sodium lauryl sulfate, zinc stearate, sodium stearate, stearic acid, and mixtures thereof; (10) coloring agents; and (11) controlled release agents such as crospovidone or ethyl cellulose. In the case of capsules, tablets and pills, the pharmaceutical compositions may also comprise buffering agents.
Solid compositions of a similar type may also be employed as fillers in soft and hard-shelled gelatin capsules using such excipients as lactose or milk sugars, as well as high molecular weight polyethylene glycols and the like.

A tablet may be made by compression or molding, optionally with one or more accessory ingredients. Compressed tablets may be prepared using binder (for example, gelatin or hydroxypropylmethyl cellulose), lubricant, inert diluent, preservative, disintegrant (for example, sodium starch glycolate or cross-linked sodium carboxymethyl cellulose), surface-active or dispersing agent. Molded tablets may be made by molding in a suitable machine a mixture of the powdered compound moistened with an inert liquid diluent.

The tablets, and other solid dosage forms of the pharmaceutical compositions of the present invention, such as dragees, capsules, pills and granules, may optionally be scored or prepared with coatings and shells, such as enteric coatings and other coatings well known in the pharmaceutical-formulating art. They may also be formulated so as to provide slow or controlled release of the active ingredient therein using, for example, hydroxypropylmethyl cellulose in varying proportions to provide the desired release profile, other polymer matrices, liposomes and/or microspheres. They may be formulated for rapid release, e.g., freeze-dried. They may be sterilized by, for example, filtration through a bacteria-retaining filter, or by incorporating sterilizing agents in the form of sterile solid compositions which can be dissolved in sterile water, or some other sterile injectable medium immediately before use. These compositions may also optionally contain opacifying agents and may be of a composition that they release the active ingredient(s) only, or preferentially, in a certain portion of the gastrointestinal tract, optionally, in a delayed manner. Examples of embedding compositions which can be used include polymeric substances and waxes. The active ingredient can also be in micro-encapsulated form, if appropriate, with one or more of the above-described excipients.

Liquid dosage forms for oral administration of the compounds of the invention include pharmaceutically acceptable emulsions, microemulsions, solutions, suspensions, syrups and elixirs. In addition to the active ingredient, the liquid dosage forms may contain inert diluents commonly used in the art, such as, for example, water or other solvents, solubilizing agents and
emulsifiers, such as ethyl alcohol, isopropyl alcohol, ethyl carbonate, ethyl acetate, benzyl alcohol, benzyl benzoate, propylene glycol, 1,3-butylene glycol, oils (in particular, cottonseed, groundnut, corn, germ, olive, castor and sesame oils), glycerol, tetrahydrofurfuryl alcohol, polyethylene glycols and fatty acid esters of sorbitan, and mixtures thereof.

[00107] Besides inert diluents, the oral compositions can also include adjuvants such as wetting agents, emulsifying and suspending agents, sweetening, flavoring, coloring, perfuming and preservative agents.

[00108] Suspensions, in addition to the active compounds, may contain suspending agents as, for example, ethoxylated isostearyl alcohols, polyoxyethylene sorbitol and sorbitan esters, microcrystalline cellulose, aluminum metahydroxide, bentonite, agar-agar and tragacanth, and mixtures thereof.

[00109] Formulations of the pharmaceutical compositions of the invention for rectal or vaginal administration may be presented as a suppository, which may be prepared by mixing one or more compounds of the invention with one or more suitable nonirritating excipients or carriers comprising, for example, cocoa butter, polyethylene glycol, a suppository wax or a salicylate, and which is solid at room temperature, but liquid at body temperature and, therefore, will melt in the rectum or vaginal cavity and release the active compound.

[00110] Formulations of the present invention which are suitable for vaginal administration also include pessaries, tampons, creams, gels, pastes, foams or spray formulations containing such carriers as are known in the art to be appropriate.

[00111] Dosage forms for the topical or transdermal administration of a compound of this invention include powders, sprays, ointments, pastes, creams, lotions, gels, solutions, patches and inhalants. The active compound may be mixed under sterile conditions with a pharmaceutically-acceptable carrier, and with any preservatives, buffers, or propellants which may be required.

[00112] The ointments, pastes, creams and gels may contain, in addition to an active compound of this invention, excipients, such as animal and vegetable fats, oils, waxes, paraffins, starch, tragacanth, cellulose derivatives, polyethylene glycols, silicones, bentonites, silicic acid, talc and zinc oxide, or mixtures thereof.
[00113] Powders and sprays can contain, in addition to a compound of this invention, excipients such as lactose, talc, silicic acid, aluminum hydroxide, calcium silicates and polyamide powder, or mixtures of these substances. Sprays can additionally contain customary propellants, such as chlorofluorohydrocarbons and volatile unsubstituted hydrocarbons, such as butane and propane.

[00114] Transdermal patches have the added advantage of providing controlled delivery of a compound of the present invention to the body. Such dosage forms can be made by dissolving or dispersing the compound in the proper medium. Absorption enhancers can also be used to increase the flux of the compound across the skin. The rate of such flux can be controlled by either providing a rate controlling membrane or dispersing the compound in a polymer matrix or gel.

[00115] Ophthalmic formulations, eye ointments, powders, solutions and the like, are also contemplated as being within the scope of this invention.

[00116] Pharmaceutical compositions of this invention suitable for parenteral administration comprise one or more compounds of the invention in combination with one or more pharmaceutically-acceptable sterile isotonic aqueous or nonaqueous solutions, dispersions, suspensions or emulsions, or sterile powders which may be reconstituted into sterile injectable solutions or dispersions just prior to use, which may contain sugars, alcohols, antioxidants, buffers, bacteriostats, solutes which render the formulation isotonic with the blood of the intended recipient or suspending or thickening agents.

[00117] Examples of suitable aqueous and nonaqueous carriers which may be employed in the pharmaceutical compositions of the invention include water, ethanol, polyols (such as glycerol, propylene glycol, polyethylene glycol, and the like), and suitable mixtures thereof, vegetable oils, such as olive oil, and injectable organic esters, such as ethyl oleate. Proper fluidity can be maintained, for example, by the use of coating materials, such as lecithin, by the maintenance of the required particle size in the case of dispersions, and by the use of surfactants.

[00118] These compositions may also contain adjuvants such as preservatives, wetting agents, emulsifying agents and dispersing agents. Prevention of the action of microorganisms
upon the subject compounds may be ensured by the inclusion of various antibacterial and
antifungal agents, for example, paraben, chlorobutanol, phenol sorbic acid, and the like. It may
also be desirable to include isotonic agents, such as sugars, sodium chloride, and the like into the
compositions. In addition, prolonged absorption of the injectable pharmaceutical form may be
brought about by the inclusion of agents which delay absorption such as aluminum monostearate
and gelatin.

[00119] In some cases, in order to prolong the effect of a drug, it is desirable to slow the
absorption of the drug from subcutaneous or intramuscular injection. This may be accomplished
by the use of a liquid suspension of crystalline or amorphous material having poor water
solubility. The rate of absorption of the drug then depends upon its rate of dissolution which, in
turn, may depend upon crystal size and crystalline form. Alternatively, delayed absorption of a
parenterally-administered drug form is accomplished by dissolving or suspending the drug in an
oil vehicle.

[00120] Injectable depot forms are made by forming microencapsule matrices of the
subject compounds in biodegradable polymers such as polylactide-polyglycolide. Depending on
the ratio of drug to polymer, and the nature of the particular polymer employed, the rate of drug
release can be controlled. Examples of other biodegradable polymers include poly(orthoesters)
and poly(anhydrides). Depot injectable formulations are also prepared by entrapping the drug in
liposomes or microemulsions which are compatible with body tissue.

[00121] When the compounds of the present invention are administered as
pharmaceuticals, to humans and animals, they can be given per se or as a pharmaceutical
composition containing, for example, 0.1 to 99% (more preferably, 10 to 30%) of active
ingredient in combination with a pharmaceutically acceptable carrier.

[00122] The preparations of the present invention may be given orally, parenterally,
topically, or rectally. They are of course given in forms suitable for each administration route.
For example, they are administered in tablets or capsule form, by injection, inhalation, eye lotion,
ointment, suppository, etc. administration by injection, infusion or inhalation; topical by lotion or
ointment; and rectal by suppositories. Oral administrations are preferred.
The phrases "parenteral administration" and "administered parenterally" as used herein means modes of administration other than enteral and topical administration, usually by injection, and includes, without limitation, intravenous, intramuscular, intraarterial, intrathecal, intracapsular, intraorbital, intracardiac, intradermal, intraperitoneal, transtracheal, subcutaneous, subcuticular, intraarticular, subcapsular, subarachnoid, intraspinal and intrasternal injection and infusion.

The phrases "systemic administration," "administered systemically," "peripheral administration" and "administered peripherally" as used herein mean the administration of a compound, drug or other material other than directly into the central nervous system, such that it enters the patient's system and, thus, is subject to metabolism and other like processes, for example, subcutaneous administration.

These compounds may be administered to humans and other animals for therapy by any suitable route of administration, including orally, nasally, as by, for example, a spray, rectally, intravaginally, parenterally, intracisternally and topically, as by powders, ointments or drops, including buccally and sublingually.

Regardless of the route of administration selected, the compounds of the present invention, which may be used in a suitable hydrated form, and/or the pharmaceutical compositions of the present invention, are formulated into pharmaceutically-acceptable dosage forms by conventional methods known to those of skill in the art.

Actual dosage levels of the active ingredients in the pharmaceutical compositions of this invention may be varied so as to obtain an amount of the active ingredient which is effective to achieve the desired therapeutic response for a particular patient, composition, and mode of administration, without being toxic to the patient.

The selected dosage level will depend upon a variety of factors including the activity of the particular compound of the present invention employed, or the ester, salt or amide thereof, the route of administration, the time of administration, the rate of excretion or metabolism of the particular compound being employed, the rate and extent of absorption, the duration of the treatment, other drugs, compounds and/or materials used in combination with the particular
compound employed, the age, sex, weight, condition, general health and prior medical history of the patient being treated, and like factors well known in the medical arts.

[00129] A physician or veterinarian having ordinary skill in the art can readily determine and prescribe the effective amount of the pharmaceutical composition required. For example, the physician or veterinarian could start doses of the compounds of the invention employed in the pharmaceutical composition at levels lower than that required in order to achieve the desired therapeutic effect and gradually increase the dosage until the desired effect is achieved.

[00130] In general, a suitable daily dose of a compound of the invention will be that amount of the compound which is the lowest dose effective to produce a therapeutic effect. Such an effective dose will generally depend upon the factors described above. Generally, oral, intravenous, intracerebroventricular and subcutaneous doses of the compounds of this invention for a patient, when used for the indicated analgesic effects, will range from about 0.0001 to about 100 mg per kilogram of body weight per day.

[00131] If desired, the effective daily dose of the active compound may be administered as two, three, four, five, six or more sub-doses administered separately at appropriate intervals throughout the day, optionally, in unit dosage forms. Preferred dosing is one administration per day.

[00132] While it is possible for a compound of the present invention to be administered alone, it is preferable to administer the compound as a pharmaceutical formulation (composition).

[00133] The compounds according to the invention may be formulated for administration in any convenient way for use in human or veterinary medicine, by analogy with other pharmaceuticals.

[00134] In another aspect, the present invention provides pharmaceutically acceptable compositions which comprise a therapeutically-effective amount of one or more of the subject compounds, as described above, formulated together with one or more pharmaceutically acceptable carriers (additives) and/or diluents. As described in detail below, the pharmaceutical compositions of the present invention may be specially formulated for administration in solid or liquid form, including those adapted for the following: (1) oral administration, for example,
drenches (aqueous or non-aqueous solutions or suspensions), tablets, boluses, powders, granules, pastes for application to the tongue; (2) parenteral administration, for example, by subcutaneous, intramuscular or intravenous injection as, for example, a sterile solution or suspension; (3) topical application, for example, as a cream, ointment or spray applied to the skin, lungs, or mucous membranes; or (4) intravaginally or intrarectally, for example, as a pessary, cream or foam; (5) sublingually or buccally; (6) ocularly; (7) transdermally; or (8) nasally.

[00135] The term "treatment" is intended to encompass also prophylaxis, therapy and cure.

[00136] The patient receiving this treatment is any animal in need, including primates, in particular humans, and other mammals such as equines, cattle, swine and sheep; and poultry and pets in general.

[00138] While all suitable amphiphilic carriers are contemplated, the presently preferred carriers are generally those that have Generally-Recognized-as-Safe (GRAS) status, and that can both solubilize the compound of the present invention and microemulsify it at a later stage when the solution comes into a contact with a complex water phase (such as one found in human gastrointestinal tract). Usually, amphiphilic ingredients that satisfy these requirements have HLB (hydrophilic to lipophilic balance) values of 2-20, and their structures contain straight chain aliphatic radicals in the range of C-6 to C-20. Examples are polyethylene-glycolized fatty glycerides and polyethylene glycols.

[00139] Commercially available amphiphilic carriers are particularly contemplated, including Gelucire-series, Labrafil, Labrasol, or Lauroglycol (all manufactured and distributed by Gattefosse Corporation, Saint Priest, France), PEG-mono-oleate, PEG-di-oleate, PEG-mono-
laurate and di-laurate, Lecithin, Polysorbate 80, etc (produced and distributed by a number of companies in USA and worldwide).

[00140] Hydrophilic polymers suitable for use in the present invention are those which are readily water-soluble, can be covalently attached to a vesicle-forming lipid, and which are tolerated in vivo without toxic effects (*i.e.*, are biocompatible). Suitable polymers include polyethylene glycol (PEG), polylactic (also termed polylactide), polyglycolic acid (also termed polyglycolide), a polylactic-polyglycolic acid copolymer, and polyvinyl alcohol. Preferred polymers are those having a molecular weight of from about 100 or 120 daltons up to about 5,000 or 10,000 daltons, and more preferably from about 300 daltons to about 5,000 daltons. In a particularly preferred embodiment, the polymer is polyethyleneglycol having a molecular weight of from about 100 to about 5,000 daltons, and more preferably having a molecular weight of from about 300 to about 5,000 daltons. In a particularly preferred embodiment, the polymer is polyethyleneglycol of 750 daltons (PEG(750)). Polymers may also be defined by the number of monomers therein; a preferred embodiment of the present invention utilizes polymers of at least about three monomers, such PEG polymers consisting of three monomers (approximately 150 daltons).

[00141] Other hydrophilic polymers which may be suitable for use in the present invention include polyvinylpyrrolidone, polymethoxazoline, polyethylxazoline, polyhydroxypropyl methacrylamide, polymethacrylamide, polydimethylacrylamide, and derivatized celluloses such as hydroxymethylcellulose or hydroxyethylcellulose.

[00142] In certain embodiments, a formulation of the present invention comprises a biocompatible polymer selected from the group consisting of polyamides, polycarbonates, polyalkylenes, polymers of acrylic and methacrylic esters, polyvinyl polymers, polyglycolides, polysiloxanes, polyurethanes and co-polymers thereof, celluloses, polypropylene, polyethylene, polystyrene, polymers of lactic acid and glycolic acid, polyanhydrides, poly(ortho)esters, poly(butic acid), poly(valeric acid), poly(lactide-co-caprolactone), polysaccharides, proteins, polyhyaluronic acids, polycyanoacrylates, and blends, mixtures, or copolymers thereof.
Cyclodextrins are cyclic oligosaccharides, consisting of 6, 7 or 8 glucose units, designated by the Greek letter alpha, beta or gamma, respectively. Cyclodextrins with fewer than six glucose units are not known to exist. The glucose units are linked by alpha-1,4-glucosidic bonds. As a consequence of the chair conformation of the sugar units, all secondary hydroxyl groups (at C-2, C-3) are located on one side of the ring, while all the primary hydroxyl groups at C-6 are situated on the other side. As a result, the external faces are hydrophilic, making the cyclodextrins water-soluble. In contrast, the cavities of the cyclodextrins are hydrophobic, since they are lined by the hydrogen of atoms C-3 and C-5, and by ether-like oxygens. These matrices allow complexation with a variety of relatively hydrophobic compounds, including, for instance, steroid compounds such as 17-beta-estradiol (see, e.g., van Uden et al. Plant Cell Tiss. Org. Cult. 38:1-3-1 13 (1994)). The complexation takes place by Van der Waals interactions and by hydrogen bond formation. For a general review of the chemistry of cyclodextrins, see, Wenz, Agnew. Chem. Int. Ed. Engl., 33:803-822 (1994).

The physico-chemical properties of the cyclodextrin derivatives depend strongly on the kind and the degree of substitution. For example, their solubility in water ranges from insoluble (e.g., triacetyl-beta-cyclodextrin) to 147% soluble (w/v) (G-2-beta-cyclodextrin). In addition, they are soluble in many organic solvents. The properties of the cyclodextrins enable the control over solubility of various formulation components by increasing or decreasing their solubility.

Numerous cyclodextrins and methods for their preparation have been described. For example, Parmeter (I), et al. (U.S. Pat. No. 3,453,259) and Gramera, et al. (U.S. Pat. No. 3,459,731) described electroneutral cyclodextrins. Other derivatives include cyclodextrins with cationic properties [Parmeter (II), U.S. Pat. No. 3,453,257], insoluble crosslinked cyclodextrins (Solms, U.S. Pat. No. 3,420,788), and cyclodextrins with anionic properties [Parmeter (III), U.S. Pat. No. 3,426,011]. Among the cyclodextrin derivatives with anionic properties, carboxylic acids, phosphorous acids, phosphinous acids, phosphonic acids, phosphoric acids, thiophosphonic acids, thiosulphinic acids, and sulfonic acids have been appended to the parent cyclodextrin [see,
Parmeter (III), supra]. Furthermore, sulfoalkyl ether cyclodextrin derivatives have been described by Stella, et al. (U.S. Pat. No. 5,134,127).

Liposomes consist of at least one lipid bilayer membrane enclosing an aqueous internal compartment. Liposomes may be characterized by membrane type and by size. Small unilamellar vesicles (SUVs) have a single membrane and typically range between 0.02 and 0.05 \( \mu \text{m} \) in diameter; large unilamellar vesicles (LUVs) are typically larger than 0.05 \( \mu \text{m} \). Oligolamellar large vesicles and multilamellar vesicles have multiple, usually concentric, membrane layers and are typically larger than 0.1 \( \mu \text{m} \). Liposomes with several nonconcentric membranes, i.e., several smaller vesicles contained within a larger vesicle, are termed multivesicular vesicles.

One aspect of the present invention relates to formulations comprising liposomes containing a compound of the present invention, where the liposome membrane is formulated to provide a liposome with increased carrying capacity. Alternatively or in addition, the compound of the present invention may be contained within, or adsorbed onto, the liposome bilayer of the liposome. The compound of the present invention may be aggregated with a lipid surfactant and carried within the liposome's internal space; in these cases, the liposome membrane is formulated to resist the disruptive effects of the active agent-surfactant aggregate.

According to one embodiment of the present invention, the lipid bilayer of a liposome contains lipids derivatized with polyethylene glycol (PEG), such that the PEG chains extend from the inner surface of the lipid bilayer into the interior space encapsulated by the liposome, and extend from the exterior of the lipid bilayer into the surrounding environment.

Active agents contained within liposomes of the present invention are in solubilized form. Aggregates of surfactant and active agent (such as emulsions or micelles containing the active agent of interest) may be entrapped within the interior space of liposomes according to the present invention. A surfactant acts to disperse and solubilize the active agent, and may be selected from any suitable aliphatic, cycloaliphatic or aromatic surfactant, including but not limited to biocompatible lysophosphatidylcholines (LPCs) of varying chain lengths (for example, from about C_{14} to about C_{20}). Polymer-derivatized lipids such as PEG-lipids...
may also be utilized for micelle formation as they will act to inhibit micelle/membrane fusion, and as the addition of a polymer to surfactant molecules decreases the CMC of the surfactant and aids in micelle formation. Preferred are surfactants with CMCs in the micromolar range; higher CMC surfactants may be utilized to prepare micelles entrapped within liposomes of the present invention, however, micelle surfactant monomers could affect liposome bilayer stability and would be a factor in designing a liposome of a desired stability.

Liposomes according to the present invention may be prepared by any of a variety of techniques that are known in the art. See, e.g., U.S. Pat. No. 4,235,871; Published PCT applications WO 96/14057; New RRC, Liposomes: A practical approach, IRL Press, Oxford (1990), pages 33-104; Lasic DD, Liposomes from physics to applications, Elsevier Science Publishers BV, Amsterdam, 1993.

For example, liposomes of the present invention may be prepared by diffusing a lipid derivatized with a hydrophilic polymer into preformed liposomes, such as by exposing preformed liposomes to micelles composed of lipid-grafted polymers, at lipid concentrations corresponding to the final mole percent of derivatized lipid which is desired in the liposome. Liposomes containing a hydrophilic polymer can also be formed by homogenization, lipid-field hydration, or extrusion techniques, as are known in the art.

In one aspect of the present invention, the liposomes are prepared to have substantially homogeneous sizes in a selected size range. One effective sizing method involves extruding an aqueous suspension of the liposomes through a series of polycarbonate membranes having a selected uniform pore size; the pore size of the membrane will correspond roughly with the largest sizes of liposomes produced by extrusion through that membrane. See e.g., U.S. Pat. No. 4,737,323 (Apr. 12, 1988).

The release characteristics of a formulation of the present invention depend on the encapsulating material, the concentration of encapsulated drug, and the presence of release modifiers. For example, release can be manipulated to be pH dependent, for example, using a pH sensitive coating that releases only at a low pH, as in the stomach, or a higher pH, as in the intestine. An enteric coating can be used to prevent release from occurring until after passage
through the stomach. Multiple coatings or mixtures of cyanamide encapsulated in different materials can be used to obtain an initial release in the stomach, followed by later release in the intestine. Release can also be manipulated by inclusion of salts or pore forming agents, which can increase water uptake or release of drug by diffusion from the capsule. Excipients which modify the solubility of the drug can also be used to control the release rate. Agents which enhance degradation of the matrix or release from the matrix can also be incorporated. They can be added to the drug, added as a separate phase (i.e., as particulates), or can be co-dissolved in the polymer phase depending on the compound. In all cases the amount should be between 0.1 and thirty percent (w/w polymer). Types of degradation enhancers include inorganic salts such as ammonium sulfate and ammonium chloride, organic acids such as citric acid, benzoic acid, and ascorbic acid, inorganic bases such as sodium carbonate, potassium carbonate, calcium carbonate, zinc carbonate, and zinc hydroxide, and organic bases such as protamine sulfate, spermine, choline, ethanolamine, diethanolamine, and triethanolamine and surfactants such as Tween® and Pluronic®. Pore forming agents which add microstructure to the matrices (i.e., water soluble compounds such as inorganic salts and sugars) are added as particulates. The range should be between one and thirty percent (w/w polymer).

Uptake can also be manipulated by altering residence time of the particles in the gut. This can be achieved, for example, by coating the particle with, or selecting as the encapsulating material, a mucosal adhesive polymer. Examples include most polymers with free carboxyl groups, such as chitosan, celluloses, and especially polyacrylates (as used herein, polyacrylates refers to polymers including acrylate groups and modified acrylate groups such as cyanoacrylates and methacrylates).

Pharmaceutical Combinations

The invention especially relates to the use of a compound of the formula I (or a pharmaceutical composition comprising a compound of the formula I) in the treatment of one or more of the diseases mentioned herein; wherein the response to treatment is beneficial as demonstrated, for example, by the partial or complete removal of one or more of the symptoms of the disease up to complete cure or remission.
Philadelphia chromosome positive (Ph+) ALL accounts for 15-30% of adult ALL and up to 5% of pediatric ALL (Faderl S, Garcia-MAnero G, Thomas D, et al. Philadelphia Chromosome Positive Acute Lymphoblastic Leukemia- Current Concepts and Future Perspectives. Rev Clin Exp Hematol 2002;6:142-160). Pediatric Ph+ ALL is characterized by an older age (median 9-10 years versus approximately 4 years for all ALL patients) and higher WBC counts at diagnosis. In both adults and children, Ph+ ALL is characterized by a reciprocal translocation between chromosomes 9 and 22 (t(9;22)(q34;q11)) resulting in fusion of the BCR gene on chromosome 22 with ABL gene sequences translocated from chromosome 9, resulting in expression of the BCR-ABL 1 protein. There are 2 primary variants of BCR-ABL 1, p90BCR-ABL1, detectable in approximately 85% of Ph+ ALL patients, and p210 BCR-ABL1, typical of CML, identified in approximately 15% of Ph+ ALL patients (Dombret H, Galbert J, Boiron J, et al. Outcome of Treatment in Adults with Philadelphia chromosome-positive acute lymphoblastic leukemia- Results of the prospective multicenter LALA-94 trial. Blood 2002;100:2357-2366; Faderl S, Garcia-MAnero G, Thomas D, et al. Philadelphia Chromosome Positive Acute Lymphoblastic Leukemia- Current Concepts and Future Perspectives. Rev Clin Exp Hematol 2002;6:142-160).

The treatment of ALL is based on each patient's risk classification, with increasingly intensive treatment for patients who are at higher risk of relapse; this strategy maximizes remission rates while limiting unnecessary toxicities. Progress has been incremental, from the introduction of combination chemotherapy and treatment for pre-symptomatic central nervous system leukemia to newer, intensive treatment regimens for patients at high risk for relapse (C. H. Pui and W. E. Evans. Acute Lymphoblastic Leukemia New Engl J Med 1998;339:605-615). Prior to the development of imatinib, Ph+ALL patients were treated with intensive chemotherapy followed by hematopoietic stem cell transplant (HSCT), ideally with a matched related donor, as this was shown to result in improved EFS versus either HSCT with other donors or chemotherapy alone. Overall, and in contrast to the majority of pediatric patients with ALL, patients with Ph+ALL have had a dire prognosis with low rates of event free survival.
A compound of formula (I) can also be used in combination with other antineoplastic compounds. Such compounds include, but are not limited to ribonucleotide reductase inhibitors, topoisomerase I inhibitors; topoisomerase II inhibitors; microtubule active compounds; alkylating compounds; histone deacetylase inhibitors; mTOR inhibitors, such as RAD001; antineoplastic antimetabolites; platin compounds; compounds targeting/decreasing a protein or lipid kinase activity, methionine aminopeptidase inhibitors; biological response modifiers; inhibitors of Ras oncogenic isoforms; telomerase inhibitors; proteasome inhibitors; compounds used in the treatment of hematologic malignancies, such as FLUDARABINE; compounds which target, decrease or inhibit the activity of PKC, such as midostaurin; HSP90 inhibitors such as 17-AAG (17-allylaminogeldanamycin, NSC330507), 17-DMAG (17-dimethylaminoethylamino-17-demethoxy-geldanamycin, NSC707545), IPI-504, CNF1001, CNF2024, CNF1006 from Conformal Therapeutics, HSP990 and AUY922; temozolomide (TEMODAL®); kinesin spindle protein inhibitors, such as SB715992 or SB743921 from Glaxo SmithKline, or pentamidine/chlorpromazine from CombinatoRx; PI3K inhibitors, such as BEZ235, BMK120 or BYL719; MEK inhibitors such as ARRY142886 from Array PioPharma, AZD6244 from AstraZeneca, PD18461 from Pfizer, leucovorin, EDG binders, antileukemia compounds, S-adenosylmethionine decarboxylase inhibitors, antiproliferative antibodies or other chemotherapeutic compounds. Further, alternatively or in addition they may be used in combination with ionizing radiation

The term “ribonucleotide reductase inhibitors” refers to pyrimidine or purine nucleoside analogues including, but not limited to, fludarabine and/or cytosine arabinoside (ara-C), 6-thioguanine, 5-fluorouracil, cladribine, 6-mercaptopurine (especially in combination with ara-C against ALL), clofarabine, nelarabine (a prodruq of 9-P-arabinofuranosylguanine, ara-G), pentostatin, hydroxyurea or 2-hydroxy-l H-isoinole-l,3-dione derivatives (Nandy et al., Acta Oncologica 1994;33:953-961.
The term "topoisomerase I inhibitor" as used herein includes, but is not limited to topotecan, gimatecan, irinotecan, camptothecian and its analogues, 9-nitrocamptothecin and the macromolecular camptothecin conjugate PNU-166148 (compound A1 in WO99/17804). Irinotecan can be administered, e.g. in the form as it is marketed, e.g. under the trademark CAMPTOSAR. Topotecan can be administered, e.g., in the form as it is marketed, e.g. under the trademark HYCAMTIN.

The term "topoisomerase II inhibitor" as used herein includes, but is not limited to the anthracyclines such as doxorubicin (including liposomal formulation, e.g. CAELYX), daunorubicin, epirubicin, idarubicin and nemorubicin, the anthraquinones mitoxantrone and losoxantrone, and the podophillotoxines etoposide and teniposide. Etoposide can be administered, e.g. in the form as it is marketed, e.g. under the trademark ETOPOPHOS. Teniposide can be administered, e.g. in the form as it is marketed, e.g. under the trademark VM 26-BRISTOL. Doxorubicin can be administered, e.g. in the form as it is marketed, e.g. under the trademark ADRIBLASTIN or ADRIAMYCIN. Epirubicin can be administered, in the form as it is marketed, under the trademark FARMORUBICIN. Idarubicin can be administered, e.g. in the form as it is marketed, e.g. under the trademark ZAVEDOS. Mitoxantrone can be administered, e.g. in the form as it is marketed, e.g. under the trademark NOVANTRON.

The term "microtubule active compound" relates to microtubule stabilizing, microtubule destabilizing compounds and microtubulin polymerization inhibitors including, but not limited to taxanes, e.g. paclitaxel and docetaxel, vinca alkaloids, e.g., vinblastine, especially vinblastine sulfate, vincristine especially vincristine sulfate, and vinorelbine, discodermolides, cochicine and epothilones and derivatives thereof, e.g. epothilone B or D or derivatives thereof. Paclitaxel may be administered e.g. in the form as it is marketed, e.g. TAXOL. Docetaxel can be administered, e.g., in the form as it is marketed, e.g. under the trademark TAXOTERE.

Vinblastine sulfate can be administered, e.g., in the form as it is marketed, e.g. under the trademark VINBLASTIN R.P.. Vincristine sulfate can be administered, e.g., in the form as it is marketed, e.g. under the trademark FARMISTIN. Discodermolide can be obtained, e.g., as disclosed in US 5,010,099. Also included are Epothilone derivatives which are disclosed in

[00163] The term "alkylating compound" as used herein includes, but is not limited to, cyclophosphamide, ifosfamide, melphalan or nitrosourea (BCNU or Gliadel). Cyclophosphamide can be administered, e.g., in the form as it is marketed, e.g. under the trademark CYCLOSTIN. Ifosfamide can be administered, e.g., in the form as it is marketed, e.g. under the trademark HOLOXAN.

[00164] The term "histone deacetylase inhibitors" or "HDAC inhibitors" relates to compounds which inhibit the histone deacetylase and which possess antiproliferative activity. This includes compounds such as LDH589 disclosed in WO 02/22577, especially N-hydroxy-3-4-[(2-hydroxyethyl)[2-(1H-indol-3-yl)ethyl]-amino]methyl[phenyl]-2E-2-propenamide, N-hydroxy-3-4-[[2-(2-methyl-1H-indol-3-yl)-ethyl]-amino]methyl[phenyl]-2E'-2-propenamide and pharmaceutically acceptable salts thereof. It further especially includes Suberoylanilide hydroxamic acid (SAHA).

[00165] The term "antineoplastic antimitabolite" includes, but is not limited to, 5-fluorouracil or 5-FU, capecitabine, gemcitabine, DNA demethylating compounds, such as 5-azacytidine and decitabine, methotrexate and edatrexate, and folic acid antagonists such as pemetrexed. Capecitabine can be administered, e.g., in the form as it is marketed, e.g. under the trademark XELODA. Gemcitabine can be administered, e.g., in the form as it is marketed, e.g. under the trademark GEMZAR.

[00166] The term "platin compound" as used herein includes, but is not limited to, carboplatin, cis-platin, cisplatinum and oxaliplatin. Carboplatin can be administered, e.g., in the form as it is marketed, e.g. under the trademark CARBOPLAT. Oxaliplatin can be administered, e.g., in the form as it is marketed, e.g. under the trademark ELOXATIN.

[00167] The term "compounds targeting/decreasing a protein or lipid kinase activity"; or a "protein or lipid phosphatase activity" as used herein includes, but is not limited to, protein tyrosine kinase and/or serine and/or threonine kinase inhibitors or lipid kinase inhibitors, for example:
a) compounds targeting, decreasing or inhibiting the activity of members of the ABL1 family, their gene-fusion products (e.g. BCR-ABL1 kinase) and mutants, such as compounds which target decrease or inhibit the activity of ABL1 family members and their gene fusion products, e.g. imatinib, nilotinib, dasatinib, bosutinib, ponatinib, bafetinib, PD180970, AG957, NSC 680410 and PD173955;

b) compounds targeting, decreasing or inhibiting the activity of members of the protein kinase C (PKC) and Raf family of serine/threonine kinases, members of the MEK, SRC, JAK, FAK, PDK1, PKB/Akt, and Ras/MAPK family members, and/or members of the cyclin-dependent kinase family (CDK) and are especially those staurosporine derivatives disclosed in US 5,093,330, e.g. midostaurin; examples of further compounds include e.g. UCN-01, safingol, BAY 43-9006, Bryostatin 1, Perifosine; Ilmofosine; RO 318220 and RO 320432; GO 6976; Isis 3521; LY333531/LY379196; isochinoline compounds such as those disclosed in WO 00/09495; FTIs; BEZ235 (a PI3K inhibitor) or AT7519 (CDK inhibitor);

The term "mTOR inhibitors" relates to compounds which inhibit the mammalian target of rapamycin (mTOR) and which possess antiproliferative activity such as sirolimus (Rapamune®), everolimus (Certican™), CCI-779 and ABT578.

The term "biological response modifier" as used herein refers to a lymphokine or interferons, e.g. interferon γ.

The term "inhibitor of Ras oncogenic isoforms", e.g. H-Ras, K-Ras, or N-Ras, as used herein refers to compounds which target, decrease or inhibit the oncogenic activity of Ras e.g. a "farnesyl transferase inhibitor" e.g. L-744832, DK8G557 or R1 15777 (Zarnestra).

The term "telomerase inhibitor" as used herein refers to compounds which target, decrease or inhibit the activity of telomerase. Compounds which target, decrease or inhibit the activity of telomerase are especially compounds which inhibit the telomerase receptor, e.g. telomestatin.

The term "methionine aminopeptidase inhibitor" as used herein refers to compounds which target, decrease or inhibit the activity of methionine aminopeptidase.
Compounds which target, decrease or inhibit the activity of methionine aminopeptidase are e.g. bengamide or a derivative thereof.

The term "proteasome inhibitor" as used herein refers to compounds which target, decrease or inhibit the activity of the proteasome. Compounds which target, decrease or inhibit the activity of the proteasome include e.g. Bortezomid (Velcade™) and MLN 341.

The term "HSP90 inhibitors" as used herein includes, but is not limited to, compounds targeting, decreasing or inhibiting the intrinsic ATPase activity of HSP90; degrading, targeting, decreasing or inhibiting the HSP90 client proteins via the ubiquitin proteasome pathway. Compounds targeting, decreasing or inhibiting the intrinsic ATPase activity of HSP90 are especially compounds, proteins or antibodies which inhibit the ATPase activity of HSP90 e.g., 17-allylamino,17-demethoxygeldanamycin (17AAG), a geldanamycin derivative; other geldanamycin related compounds; radicicol and HDAC inhibitors. Example HSP90 inhibitors are HSP990 and AUY922.

For the treatment of acute myeloid leukemia (AML), compounds of formula (I) can be used in combination with standard leukemia therapies, especially in combination with therapies used for the treatment of AML. In particular, compounds of formula (I) can be administered in combination with, e.g., farnesyl transferase inhibitors and/or other drugs useful for the treatment of AML, such as Daunorubicin, Adriamycin, Ara-C, VP-16, Teniposide, Mitoxantrone, Idarubicin, Carboplatinum and PKC412.

Compounds which target, decrease or inhibit activity of histone deacetylase (HDAC) inhibitors such as sodium butyrate and suberoylanilide hydroxamic acid (SAHA) inhibit the activity of the enzymes known as histone deacetylases. Specific HDAC inhibitors include MS275, SAHA, FK228 (formerly FR901228), Trichostatin A and compounds disclosed in US 6,552,065, in particular, N-hydroxy-3-[4-[[2-(2-methyl-1H-indol-3-yl)-ethyl]-amino]-methyl]phenyl]-2E'-2-propenamide, or a pharmaceutically acceptable salt thereof and N-hydroxy-3-[4-[(2-hydroxyethyl) [2-(1H-indol-3-yl)ethyl]-amino]methyl]phenyl]-2E'-2-propenamide, or a pharmaceutically acceptable salt thereof, especially the lactate salt.
Tumor cell damaging approaches refer to approaches such as ionizing radiation. The term "ionizing radiation" referred to above and hereinafter means ionizing radiation that occurs as either electromagnetic rays (such as X-rays and gamma rays) or particles (such as alpha and beta particles). Ionizing radiation is provided in, but not limited to, radiation therapy and is known in the art. See Hellman, Principles of Radiation Therapy, Cancer, in Principles and Practice of Oncology, Devita et al., Eds., 4th Edition, Vol. 1, pp. 248-275 (1993).

The term "S-adenosylmethionine decarboxylase inhibitors" as used herein includes, but is not limited to the compounds disclosed in US 5,461,076.

"Other chemotherapeutic compounds" include, but are not limited to, plant alkaloids, hormonal compounds and antagonists; biological response modifiers, preferably lymphokines or interferons; antisense oligonucleotides or oligonucleotide derivatives; shRNA or siRNA; or miscellaneous compounds or compounds with other or unknown mechanism of action.

The structure of the active compounds identified by code nos., generic or trade names may be taken from the actual edition of the standard compendium "The Merck Index" or from databases, e.g. Patents International (e.g. IMS World Publications).

None of the quotations of references made within the present disclosure is to be understood as an admission that the references cited are prior art that would negatively affect the patentability of the present invention.

Processes for Making Compounds of the Invention

The present invention also includes processes for the preparation of compounds of the invention. In the reactions described, it can be necessary to protect reactive functional groups, for example hydroxy, amino, imino, thio or carboxy groups, where these are desired in the final product, to avoid their unwanted participation in the reactions. Conventional protecting groups can be used in accordance with standard practice, for example, see T.W. Greene and P. G. M. Wuts in "Protective Groups in Organic Chemistry", John Wiley and Sons, 1991.

Where temperatures are given hereinbefore or hereinafter, "about" has to be added, as minor deviations from the numeric values given, e.g. variations of ±10 %, are tolerable. All reactions may take place in the presence of one or more diluents and/or solvents. The starting
materials may be used in equimolar amounts; alternatively, a compound may be used in excess, *e.g.* to function as a solvent or to shift equilibrium or to generally accelerate reaction rates.

Reaction aids, such as acids, bases or catalysts may be added in suitable amounts, as known in the field, required by a reaction and in line with generally known procedures.

**[00186]** Compounds of formula (I) can be prepared by proceeding as in the following Reaction Scheme I:

![Reaction Scheme I](image)

[00187] in which Y, Y<sub>1</sub>, Y<sub>4</sub>, Y<sub>5</sub>, Y<sub>6</sub>, R<sub>3</sub> and R<sub>4</sub> are as defined for formula (I) in the Summary of the Invention, and Xi is a halogen, in particular chlorine, bromine or iodine.

[00188] Step a: A compound of formula (3) by reacting the acid chloride from a compound of formula (1) with a compound of formula (2) in the presence of a suitable solvent (for example tetrahydrofuran, or the like), and an organic base (for example diisopropylethylamine, or the like). The reaction takes place from about 0°C to about room temperature and can take up to about 2 hours to complete.

[00189] The acid chloride of a compound of formula (1) can be prepared with a chlorinating agent (for example thionyl chloride, or oxalyl chloride, or the like) in the presence of a catalyst (for example dimethylformamide, or the like) and a suitable solvent (for example toluene, or the like). The reaction takes place at about room temperature or by heating to about 85°C and can take up to about 2 hours to complete.

[00190] Or alternatively: a compound of formula (3) can be prepared by reacting a compound of formula (1) with a compound of formula (2) in the presence of a coupling reagent (such as 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride and hydroxybenzotriazole, or 2-(6-chloro-1H-benzotriazole-1-yl)-1,1,3,3-tetramethylaminium hydrochloride and hydroxybenzotriazole, or the like).
hexafluorophosphate, or the like), a suitable base (such as N-methylmorpholine, diisopropylethylamine, or the like) and a suitable solvent (such as dichloromethane, dimethylformamide, tetrahydrofuran, or the like). The reaction takes place at room temperature and can take up to about 12 hours to complete.

Step b: A compound of formula (I) can be prepared by reacting a compound of formula (3), Xi being a halogen, preferably chloro, bromo or iodo, with Ri-Z⁺ wherein Y₄ is as defined herein, Zi being preferably a boronic acid or ester (Suzuki reaction), in the presence of a suitable solvent (for example dimethoxyethane, or a mixture of dimethoxyethane and water, or the like), a suitable inorganic base (for example sodium carbonate, or the like), and a palladium catalyst (for example bis(triphenylphosphine)palladium(II) dichloride, or 1,1′-bis(diphenylphosphino)ferrocene-palladium(II)dichloride dichloromethane complex, or tetrakis(triphenylphosphine)palladium(0), or the like) and optionally a cosolvent (for example, ethanol, or the like). The reaction takes place from about 80°C to about 130°C and can take from about 20 minutes to about 18 hours to complete.

Or alternatively, by reacting a compound of formula (3), Xi being a halogen, preferably iodo, with, with an imidazole, in the presence of a suitable solvent (for dimethylsulfoxide, or the like), a suitable inorganic base (for example potassium carbonate, or the like), and catalyst (for example a combination of copper iodide and L-proline, or the like). The reaction takes place at about 90°C and can take from about 2 to 3 days to complete.

Or alternatively, by reacting a compound of formula (3), Xi being a proton, with thiazole, in the presence of a suitable solvent (for dimethylacetamide, or the like), a suitable inorganic base (for example potassium acetate, or the like), and a palladium catalyst (for example palladium acetate, or the like). The reaction takes place at about 130°C and can take from about 2 to 3 days to complete.

Compounds of formula (I), wherein Y₄ is CR₂, can be prepared by proceeding as in the following Reaction Scheme II:

Reaction Scheme II:
in which $Y$, $Y_i$, $Y_j$, $Y_k$, $R_i$, $R_2$, $R_3$ and $R_4$ are as defined for formula (I) in the Summary of the Invention and $X_i$ and $X_2$ represent halogen atoms, $X_i$ can be selected from chloro, bromo, or iodo and $X_2$ can be selected from chloro or fluoro.

Step c: A compound of formula (5) can be prepared by reacting a compound of formula (4) with a compound of formula (2), using the acid chloride of the compound of formula (4) in analogy to Step a.

Step d: A compound of formula (6), can be prepared by reacting a compound of formula (5), wherein $X_2$ being preferably chloro, with a borane reagent (2-(3,6-dihydro-2H-pyran-4-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane, trimethylboroxine, or the like) in the presence of a suitable solvent (for example dioxane, toluene-ethanol, or the like), an inorganic base (for example potassium or sodium carbonate, or the like), and a palladium catalyst (for example tetrakis(triphenylphosphine)palladium(0), or the like). The reaction takes place at about $80^\circ$C and can take up to 2 hours to complete.

Or alternatively by reacting a compound of formula (5) with $R_2$-CN, wherein $R_2$ is as defined in the Summary of the Invention, (for example isobutynitrile, tetrahydro-2h-pyran-4-carbonitrile, cyclobutane carbonitrile, or the like) in the presence of a suitable solvent (for example tetrahydrofuran, or the like), and a base (for example potassium bis(trimethylsilyl)amide, or the like). The reaction takes place at about -70$^\circ$C to room temperature and can take up to 18 hours to complete.

Or alternatively by reacting a compound of formula (5) with $R_7$-OH, wherein $R_7$-O represents $R_2$ as defined in the Summary of the Invention in which $R_2$ is linked to the ring carbon.
via an oxygen atom, with an alkoxide (for example sodium methoxide, sodium ethoxide, or the like) in the presence of a suitable solvent (for example methanol, ethanol, or the like). The reaction takes place at about 80°C to and can take up to 2 hours to complete.

[00200] Or alternatively by reacting a compound of formula (5) with R7-OH, wherein R7-O represents R2 as defined in the Summary of the Invention in which R2 is linked to the ring carbon via an oxygen atom, with an alcohol (for example 2-methoxyethanol, ethane-1,2-diol, or the like) in the presence of an inorganic base (potassium carbonate, or the like) and a suitable solvent (for example dimethylformamide, or the like). The reaction takes place at about 50 - 110°C to and can take up to 4 to 18 hours to complete.

[00201] Step e: A compound of formula (lb) can be prepared by reacting a compound of formula (7), Xi being a halogen, preferably chloro, bromo or iodo, with R1-Z1, wherein R1 is as defined herein, Z1 being preferably a boronic acid or ester (Suzuki reaction), in analogy to Step b.

[00202] Compounds of formula (l), wherein Y4 is CR2, can be prepared by proceeding as in the following Reaction Scheme III:

Reaction Scheme III:

- Step f: A compound of formula (8) can be prepared by reacting a compound of formula (7), Xi being preferably iodo, with an a solution of an alkylmagnesium chloride - lithium chloride complex (for example isopropylmagnesium chloride - lithium chloride complex 1 M in tetrahydrofuran, or the like), and subsequently with an alkylborate (for example trimethylborate, or the like), in the presence of a suitable solvent (for example tetrahydrofuran, or the like). The reaction takes place at about -15°C to room temperature, and can take up to an hour to complete.
Step g: A compound of formula (lb) can be prepared by reacting a compound of formula (8) with R1-X₃, X₃ being preferably bromo, wherein R₁ is as defined herein, in the presence of a suitable solvent (for example dimethoxyethane, or the like), (Suzuki reaction) in analogy to Step b.

Compounds of formula (I), wherein Y₁, Y₄, Y₅, Y₆ are CH, R₃ is a proton, R¹ is pyrimidin-5-yl can be prepared by proceeding as in the following Reaction Scheme IV:

![Reaction Scheme IV]

in which R₄ are as defined for formula (I) in the Summary of the Invention.

Step h: A compound of formula (Ic) can be prepared by reacting the acid chloride of a compound of formula (9) with a compound of formula (10), in analogy to Step a.

Compounds of formula (I), wherein Y₁, Y₄, Y₅, Y₆ are CH, R₃ is a proton, Y₄ is COR₇ can be prepared by proceeding as in the following Reaction Scheme V:

![Reaction Scheme V]

in which: R₄ is as defined in the Summary of the Invention; OR₇ represents R₂ as defined in the Summary of the Invention in which R₂ is linked to the ring carbon via an oxygen atom; and X₁ is a halogen, in particular bromine.

Step i: A compound of formula (12) can be prepared by reacting a compound of formula (11) with X₃-R₇, wherein R₇ is as defined herein, X₃ being preferably chloro or bromo, in the presence of a suitable solvent (for example acetone, or the like), and an inorganic base (for
example potassium carbonate, or the like). The reaction takes place from about 70°C to about 80°C and can take up to about 16 hours to complete.

[00212] Step j: A compound of formula (Id) can be prepared by reacting a compound of formula (12), Xi being bromo, with Ri-Zi, wherein Ri is as defined herein, Zi being preferably a boronic acid or ester (Suzuki reaction), in analogy to Step b.

Reaction Scheme VI

[00213] in which Y, Y1, Y5, Y6, R1, R2, R3 and R4 are as defined for formula (1) in the Summary of the Invention and Xi and X2 represent halogen atoms, Xi can be selected from chloro, bromo, or iodo and X2 can be selected from chloro or fluoro.

[00214] Step k: A compound of formula (13) can be prepared by reacting a compound of formula (5) with Grignard reagent (for example isopropyl magnesium chloride, or the like) in the presence of a suitable solvent (for example tetrahydrofuran, or the like), followed by the addition of dimethyl formamide. The reaction takes place at about -85°C to -40°C to about room temperature and can take up to about 3 hours to complete.

[00215] Step l: A compound of formula (le) can be prepared by reacting a compound of formula (16) with glyoxal and ammoniac in the presence of a suitable solvent (for example water / methanol, or the like). The reaction takes place at about 80°C and can take up to about 2 hours to complete.

Reaction Scheme VII

54
[00216] in which Y, Yi, Y, Y, Ri, R2, R3 and R4 are as defined for formula (I) in the
Summary of the Invention and X1 and X2 represent halogen atoms, X1 can be selected from
bromo, or iodo and X2 can be selected from chloro or fluoro.

[00217] Step m: A compound of formula (14) can be prepared by reacting a compound of
formula (5), with R1-Z1, wherein R1 is as defined herein, Z1 being preferably a boronic acid or
ester (Suzuki reaction), in analogy to Step b.

[00218] Step n: A compound of formula (1b) can be prepared by reacting a compound of
formula (14) with R7-OH, wherein R7-O represents R2 as defined in the Summary of the Invention
in which R2 is linked to the ring carbon via an oxygen atom, with an alcohol (for example
tetrahydro-2H-pyran-4-ol, or the like) in the presence of an inorganic base (potassium carbonate,
or the like) and a suitable solvent (for example acetonitrile, or the like). The reaction takes place
at about 110 - 130°C to and can take up to 26 hours to complete.

[00219] Detailed examples of the synthesis of compounds of formula (I) can be found in
the Examples, infra.

Additional Processes for Making Compounds of the Invention

[00220] A compound of the invention can be prepared as a pharmaceutically acceptable
acid addition salt by reacting the free base form of the compound with a pharmaceutically
acceptable inorganic or organic acid. Alternatively, a pharmaceutically acceptable base addition
salt of a compound of the invention can be prepared by reacting the free acid form of the
compound with a pharmaceutically acceptable inorganic or organic base.

[00221] Compounds of the formula (I) can also be modified by appending appropriate
functionalities to enhance selective biological properties. Modifications of this kind are known in
the art and include those that increase penetration into a given biological system (e.g. blood,
lymphatic system, central nervous system, testis), increase bioavailability, increase solubility to
allow parenteral administration (e.g. injection, infusion), alter metabolism and/or alter the rate of
secretion. Examples of this type of modifications include but are not limited to esterification, e.g.
with polyethylene glycols, derivatisation with pivaloyloxy or fatty acid substituents, conversion to
carbamates, hydroxylation of aromatic rings and heteroatom substitution in aromatic rings.
Wherever compounds of the formula (I), and/or N-oxides, tautomers and/or (preferably pharmaceutically acceptable) salts thereof are mentioned, this comprises such modified formulae, while preferably the molecules of the formula (I), their N-oxides, their tautomers and/or their salts are meant.

Alternatively, the salt forms of the compounds of the invention can be prepared using salts of the starting materials or intermediates. In view of the close relationship between the novel compounds of the formula (I) in free form and those in the form of their salts, including those salts that can be used as intermediates, for example in the purification or identification of the novel compounds, any reference to the compounds or a compound of the formula (I) hereinbefore and hereinafter is to be understood as referring to the compound in free form and/or also to one or more salts thereof, as appropriate and expedient, as well as to one or more solvates, e.g. hydrates.

Salts are formed, for example, as acid addition salts, preferably with organic or inorganic acids, from compounds of formula (I) with a basic nitrogen atom, especially the pharmaceutically acceptable salts. Suitable inorganic acids are, for example, halogen acids, such as hydrochloric acid, sulfuric acid, or phosphoric acid. Suitable organic acids are, for example, carboxylic, phosphonic, sulfonic or sulfamic acids, for example acetic acid, propionic acid, octanoic acid, decanoic acid, dodecanoic acid, glycolic acid, lactic acid, fumaric acid, succinic acid, malonic acid, adipic acid, pimelic acid, suberic acid, azelaic acid, malic acid, tartaric acid, citric acid, amino acids, such as glutamic acid or aspartic acid, maleic acid, hydroxymaleic acid, methylmaleic acid, cyclohexanecarboxylic acid, adamantane-carboxylic acid, benzoic acid, salicylic acid, 4-aminosalicylic acid, phthalic acid, phenylacetic acid, mandelic acid, cinnamic acid, methane- or ethane-sulfonic acid, 2-hydroxyethanesulfonic acid, ethane-1,2-disulfonic acid, benzenesulfonic acid, 4-toluenesulfonic acid, 2-naphthalenesulfonic acid, 1,5-naphthalene-disulfonic acid, 2- or 3-methylbenzenesulfonic acid, methylsulfuric acid, ethylsulfuric acid, dodecylsulfuric acid, N-cyclohexylsulfamic acid, N-methyl-, N-ethyl- or N-propyl-sulfamic acid, or other organic protonic acids, such as ascorbic acid. Salts can usually be converted to free compounds, e.g. by treating with suitable basic compounds, for example with alkali metal.
carbonates, alkali metal hydrogen carbonates, or alkali metal hydroxides, typically potassium carbonate or sodium hydroxide.

[00224] For isolation or purification purposes it is also possible to use pharmaceutically unacceptable salts, for example picrates or perchlorates. For therapeutic use, only pharmaceutically acceptable salts or free compounds are employed (where applicable in the form of pharmaceutical preparations), and these are therefore preferred.

[00225] The free acid or free base forms of the compounds of the invention can be prepared from the corresponding base addition salt or acid addition salt from, respectively. For example a compound of the invention in an acid addition salt form can be converted to the corresponding free base by treating with a suitable base (e.g., ammonium hydroxide solution, sodium hydroxide, and the like). A compound of the invention in a base addition salt form can be converted to the corresponding free acid by treating with a suitable acid (e.g., hydrochloric acid, etc.).

[00226] Compounds of the invention in unoxidized form can be prepared from N-oxides of compounds of the invention by treating with a reducing agent (e.g., sulfur, sulfur dioxide, triphenyl phosphine, lithium borohydride, sodium borohydride, phosphorus trichloride, tribromide, or the like) in a suitable inert organic solvent (e.g., acetonitrile, ethanol, aqueous dioxane, or the like) at 0 to 80°C.

[00227] Prodrug derivatives of the compounds of the invention can be prepared by methods known to those of ordinary skill in the art (e.g., for further details see Saulnier et al., (1994), Bioorganic and Medicinal Chemistry Letters, Vol. 4, p. 1985).

[00228] Protected derivatives of the compounds of the invention can be made by means known to those of ordinary skill in the art. If one or more other functional groups, for example carboxy, hydroxy, amino, sulfhydryl or the like are or need to be protected in a starting material as described herein or any other precursor, because they should not take part in the reaction or disturb the reaction, these are such groups as are usually used in the synthesis of peptide compounds, and also of cephalosporins and penicillins, as well as nucleic acid derivatives and sugars. Protecting groups are such groups that are no longer present in the final compounds once
they are removed, while groups that remain as substituents are not protecting groups in the sense used here which are groups that are added at a starting material or intermediate stage and removed to obtain a final compound. Also in the case of conversions of a compound of the formula (I) into a different compound of the formula (I), protecting groups may be introduced and removed, if useful or required. The protecting groups may already be present in precursors and should protect the functional groups concerned against unwanted secondary reactions, such as acylations, etherifications, esterifications, oxidations, solvolysis, and similar reactions. It is a characteristic of protecting groups that they lend themselves readily, i.e. without undesired secondary reactions, to removal, typically by acetylation, protonolysis, solvolysis, reduction, photolysis or also by enzyme activity, for example under conditions analogous to physiological conditions, and that they are not present in the end-products. The specialist knows, or can easily establish, which protecting groups are suitable with the reactions mentioned above and below.

[00230] Compounds of the present invention can be conveniently prepared, or formed during the process of the invention, as solvates (e.g., hydrates). Hydrates of compounds of the present invention can be conveniently prepared by recrystallization from an aqueous/organic solvent mixture, using organic solvents such as dioxin, tetrahydrofuran or methanol.
Compounds of the invention can be prepared as their individual stereoisomers by reacting a racemic mixture of the compound with an optically active resolving agent to form a pair of diastereoisomeric compounds, separating the diastereomers and recovering the optically pure enantiomers. While resolution of enantiomers can be carried out using covalent diastereomeric derivatives of the compounds of the invention, dissociable complexes are preferred (e.g., crystalline diastereomeric salts). Diastereomers have distinct physical properties (e.g., melting points, boiling points, solubilities, reactivity, etc.) and can be readily separated by taking advantage of these dissimilarities. Diastereomeric mixtures for example may be separated into their individual diastereomers by means of fractionated crystallization, chromatography, solvent distribution, and similar procedures. This separation may take place either at the level of a starting compound or in a compound of formula (I) itself. Enantiomers may be separated through the formation of diastereomeric salts, for example by salt formation with an enantiomer-pure chiral acid, or by means of chromatography, for example by HPLC, using chromatographic substrates with chiral ligands. The optically pure enantiomer is then recovered, along with the resolving agent, by any practical means that would not result in racemization. A more detailed description of the techniques applicable to the resolution of stereoisomers of compounds from their racemic mixture can be found in Jean Jacques, Andre Collet, Samuel H. Wilen, "Enantiomers, Racemates and Resolutions", John Wiley And Sons, Inc., 1981.

In summary, the compounds of formula (I) can be made by a process, which involves:

(a) those of reaction schemes I-V; and
(b) optionally converting a compound of the invention into a pharmaceutically acceptable salt;
(c) optionally converting a salt form of a compound of the invention to a non-salt form;
(d) optionally converting an unoxidized form of a compound of the invention into a pharmaceutically acceptable N-oxide;
(e) optionally converting an N-oxide form of a compound of the invention to its unoxidized form;

(f) optionally resolving an individual isomer of a compound of the invention from a mixture of isomers;

(g) optionally converting a non-derivatized compound of the invention into a pharmaceutically acceptable prodrug derivative; and

(h) optionally converting a prodrug derivative of a compound of the invention to its non-derivatized form.

[00233] Insofar as the production of the starting materials is not particularly described, the compounds are known or can be prepared analogously to methods known in the art or as disclosed in the Examples hereinafter.

[00234] One of skill in the art will appreciate that the above transformations are only representative of methods for preparation of the compounds of the present invention, and that other well known methods can similarly be used.

Examples

[00235] The following examples illustrate the invention without limiting the scope thereof. In the examples provided, temperatures are given in degrees Celsius. Unless otherwise indicated, the reactions take place at room temperature. Further, if not indicated otherwise, the analytical HPLC conditions are as follows:

[00236] **Condition 1:** UPLC-MS, column Acquity BEH C18, 1.7 μm, 2.1 x 50 mm, oven at 40°C, eluents: A = water + 0.1% formic acid and B = MeCN + 0.1% formic acid, gradient from 20% to 100% B in 4.3 min, flow 0.7 mL/min, detection UV/VIS (DAD), ESI (+/-).

[00237] **Condition 2:** UPLC-MS, column Acquity HSS T3, 1.8 μm, 2.1 x 50 mm, oven at 50°C, eluents: A = water + 0.05% formic acid + 3.75 mM ammonium acetate and B = MeCN + 0.04% formic acid, gradient from 2% to 98% B in 1.40 min, then 98% B for 0.75 min, flow 1.2 mL/min, detection UV/VIS (DAD), ESI (+/-).
Condition 3: HPLC, column Chromolith® Performance, RP-18e, 100 x 4.6 mm +
precolumn 5 x 4.6 mm at RT, eluents: A = water + 0.1% formic acid and B = MeCN + 0.1%
formic acid, gradient from 2% to 100%, B in 8 min, then 100% B for 2 min, flow 2.0 mL/min,
detection UV/VIS (DAD).

Condition 4: LC-MS, column Ascentis® Express C18 2.7 µm 2.1 x 30 mm, oven
at 50°C, eluents: A = water + 0.05% TFA, and B = MeCN + 0.04% TFA, gradient from 2% to
98% B in 1.40 min, then 98% B for 0.75 min, flow 1.2 mL/min, detection UV/VIS (DAD), ESI (+).

Condition 5: LC-MS, column Ascentis® Express C18 2.7 µm 2.1 x 30 mm, oven
at 50°C, eluents: A = water + 0.05% formic acid + 3.75mM ammonium acetate, and B = MeCN +
0.04% formic acid, gradient from 2% to 98% B in 1.40 min, then 98% B for 0.75 min, flow 1.0
mL/min, detection UV/VIS (DAD), ESI (+).

Condition 6: UPLC-MS, column Acquity UPLC BEH Phenyl 1.7 µm 2.1 x 50
mm, oven at 45°C, eluents: A = water + 0.1% TFA and B = MeCN, gradient from 2% to 95% B
in 2.80 min, then 95% B for 0.50 min, flow 0.8 mL/min, detection UV/VIS (DAD), ESI (+).

Condition 7: similar condition as Condition 2, oven at 60°C instead of 50°C.

Further, if not indicated otherwise, the preparative HPLC conditions are as
follows:

Condition 8: Preparative HPLC, SunFire™ del 8 30 x 100 mm, 5 µm; flow rate 30
mL/min; mobile phase: A = water + 0.1% formic acid; B = MeCN; variable gradient, from initial
% B to final % B, and runtime as specified in the Examples.

Preparative achiral SFC is done using the following system: Waters SFC
THAR100; flow rate 100 mL / min; mobile phase: A = supercritical CO₂; B = MeOH; variable
gradient, from initial % B to final % B mtime and columns as specified in the Examples. Details
for the columns:

Column 2-EP: column 2-Ethylpyridine (250 x 30 mm, 5 µm, 60 Å), Princeton
Column 4-EP: column 4-Ethylpyridine (250 x 30 mm, 5 µm, 60 Å), Princeton
Column DEAP: column Diethyl amino (250 x 30 mm, 5 µm, 60 Å), Princeton
Column N H: Column Amino Reprosil 70 NH2 (250 x 30 mm, 5 µm), Dr Maisch

Column Diol: Column Diol (250 x 30 mm, 5 µm, 60 Å), Princeton

1H-NMR spectra were recorded on a 400 MHz, or a 600 MHz NMR spectrometer as indicated. Significant peaks are tabulated in the order: multiplicity (s, singlet; d, doublet; t, triplet; q, quartet; m, multiplet; br. s, broad singlet) and number of protons.

In the following examples, the abbreviations given below are used: aq. (aqueous); DAD (diode array detector); DCM (dichloromethane); DIPEA (diisopropyl-ethylamine); DMF (N,N-dimethylformamide); DCE (1,2-dichloroethane); DME (dimethoxy ethane); DMSO (dimethyl sulfoxide); dpff (L',L'-bis(diphenylphosphino)ferrocene); eq. (equivalents); ESI (electrospray ionization); EtOAc (ethyl acetate); EtOH (ethanol); Et₂O (diethyl ether); h (hour); HPLC (high performance liquid chromatography); HV (high vacuum); iPrOH (isopropanol); iPr₂O (diisopropyl ether); LC (liquid chromatography); M (molar); MeCN (acetonitrile); MeOH (methanol); min (minutes); mL (milliliters); MP (macroporous); MPLC (medium pressure liquid chromatography); MS (mass spectrometry); MW (microwave); n-BuLi (n-butyllithium); NMP (N-methylpyrrolidinone); NMR (nuclear magnetic resonance); PL (polystyrene); PPI1₃ (triphenylphosphine); RM (reaction mixture); RT (room temperature); sat. (saturated); sec (seconds); SFC (supercritical fluid chromatography); Si-Thiol (3-mercaptopropyl modified silica gel); SPE (solid phase extraction); TBME (methyl tert-butyl ether); TFA (trifluoroacetic acid); TEA (triethylamine); THF (tetrahydrofuran); tᵣ (retention time); UPLC (ultra performance liquid chromatography) and UV (Ultraviolet).

Example 1

3-(Pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

![Chemical Structure](image)

A mixture of 3-iodo-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 1.1, 550 mg, 1.351 mmol), pyrimidin-5-ylboronic acid (418 mg, 3.38 mmol), Na₂CO₃ (716 mg, 6.75
mmol), DME (6304 µL), water (1801 µL) and EtOH (901 µL) was stirred at 80°C for 1 h. THF (5 mL) was added and the mixture was treated with Si-Thiol (938 mg, 1.351 mmol), stirred for 2 h and filtered through Florisil®. The filtrate was evaporated to dryness under reduced pressure and the residue was purified by flash chromatography (Biotage Silica gel column, 25 g, cyclohexane/EtOAc, from 20% to 75% EtOAc) to yield the title compound as a white solid.

UPLC-MS (Condition 1) t_R = 360.0 [M+H]^+, m/z = 358.1 [M-H]; ^1^H-NMR (400 MHz, DMSO-d_6) δ ppm 7.40 (m, J=8.3 Hz, 2 H) 7.72 (t, 1 H) 7.91 (m, J=8.6 Hz, 2 H) 7.98 - 8.11 (m, 2 H) 8.36 (br. s, br. s, 1 H) 9.19 - 9.31 (m, 3 H) 10.52 (br. s, br. s, 1 H).

**Stage 1.1 3-Iodo-N-(4-(trifluoromethoxy)phenyl)benzamide**

[00254]

DIPEA (6.34 mL, 36.3 mmol) was added to a solution of 3-iodobenzoic acid (3 g, 12.1 mmol) and 2-(6-chloro-1H-benzotriazole-1-yl)-1,1,3,3-tetramethylaminium hexafluorophosphate (HCTU, 5.50 g, 13.31 mmol) in THF (25 mL) and MeCN (5 mL) and the PVM was stirred at RT for 1 h. 4-(Trifluoromethoxy)aniline (2.435 mL, 18.14 mmol) was then added and the RM was stirred at RT for 3 h. The solvent was evaporated off under reduced pressure and the residue was treated with aq. HCl (50 mL of 1 M) and extracted with TBME/EtOAc (9:1). The combined extracts were washed with aq. 1 M HCl, sat. aq. Na_2CO_3 (50 mL), water and brine, dried over MgSO_4 and the solvent was evaporated off under reduced pressure. The residue was suspended in water, filtered and dried to afford the title compound as a purple solid. UPLC-MS (Condition 1) t_R = 3.23 min, m/z = 407.8-409.8 [M+H]^+, m/z =405.9-406.9 [M-H]; ^1^H-NMR (400 MHz, DMSO-d_6) δ ppm 7.33 - 7.41 (m, 3 H) 7.88 (d, J=9.3 Hz, 2 H) 7.94 - 8.00 (m, 2 H) 8.30 (t, J=1.7 Hz, 1 H) 10.50 (s, 1 H).

**Example 2**

3-(2-(2-Hydroxyethoxy)pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide
To a suspension of NaH 60% in oil (12.19 mg, 0.508 mmol) in THF (200 µL) was added ethylene glycol (21.24 µL, 0.381 mmol). A solution of 3-(2-chloropyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 2.1, 50 mg, 0.127 mmol) in THF (2.5 mL) was then added and the RM was stirred at RT overnight. Additional ethylene glycol (200 µL, 3.59 mmol) was added and the reaction was stirred at RT for 4 h. The reaction was quenched with HCOOH and the solvent was evaporated off under reduced pressure. The residue was treated with saturated aq. NaHCO3 (10 mL) and extracted with TBME/ EtOAc (1:1). The combined extracts were washed with brine, dried over MgSO4 and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 4 g, DCM/MeOH + 1% NH4OH, from 1% to 12% MeOH + 1% NH4OH) to afford the title compound as a white solid. UPLC-MS (Condition 1) tR = 2.44 min, m/z = 420.1 [M+H]+, m/z = 418.1 [M-H]; 1H-NMR (400 MHz, DMSO-d6) δ ppm 3.76 (dd, 2 H) 4.40 (t, 2 H) 4.92 (t, J=5.5 Hz, 1 H) 7.39 (d, J=8.6 Hz, 2 H) 7.64 - 7.70 (m, 1 H) 7.91 (d, J=9.0 Hz, 2 H) 7.97 (d, J=8.1 Hz, 2 H) 8.28 (s, 1 H) 9.04 (s, 2 H) 10.48 (s, 1 H).

Stage 2.1 3-(2-Chloropyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

The title compound was prepared in an analogous fashion to that described in Example 13 using 3-iodo-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 1.1) and 2-chloropyrimidin-5-ylboronic acid to afford the title compound as a white powder. UPLC-MS (Condition 1) tR = 2.93 min, m/z = 394.0 [M+H]+, m/z = 392.0 [M-H]; 1H-NMR (400 MHz, DMSO-d6) δ ppm 7.40 (d, J=8.6 Hz, 2 H) 7.64 - 7.70 (m, 1 H) 7.91 (d, J=9.0 Hz, 2 H) 7.72 (t, J=7.7 Hz, 1 H) 7.90 (d, J=9.0 Hz, 2 H) 8.00 - 8.09 (m, 2 H) 8.36 (s, 1 H) 9.24 (s, 2 H) 10.52 (s, 1 H).
Example 3

3-(5-Cyanopyridin-3-yl)vinyl-(4-(trifluoromethoxy)phenyl)benzamide

[00259] 3-bromo-N-(4-(trifluoromethoxy)phenyl)benzamide  (Stage 3.1, 50 mg, 0.139 mmol), 5-(4,4,5,5-Tetramethyl-1,3,2-dioxaborolan-2-yl)nicotinonitrile  (0.180 mmol), 2 M Na₂CO₃ (0.104 mL, 0.208 mmol), (Ph₃P)₄Pd (8 mg, 6.94 µmol), water (0.8 mL) and DME (2.4 mL) were added to a vial, which was sealed and subjected to MW irradiation at 150°C for 10 min. The RM was filtered through a PL-Thiol MP SPE cartridge (StratoSpheres™, 6 mL) and the cartridge was washed with MeOH (10 mL). The combined filtrates were evaporated to dryness under reduced pressure and the crude product was purified by preparative HPLC to afford the title compound. LC-MS (Condition 5) tₚ = 1.24 min, m/z = 384.0 [M+H]⁺.

[00260] Stage 3.1 3-Bromo-N-(4-(trifluoromethoxy)phenyl)benzamide

[00261] A mixture of 3-bromobenzoic acid (10 g, 49.7 mmol), thionyl chloride (4.72 mL, 64.7 mmol), and DMF (1.5 mL) in toluene (80 mL) was stirred at 80°C for 2 h. The mixture was cooled to 0°C, treated dropwise with DIPEA (19.11 mL, 109 mmol) followed by 4-trifluoromethoxyaniline (6.73 mL, 49.7 mmol) and the RM was allowed to warm to RT and stirred overnight. The mixture was diluted with EtOAc (150 mL), washed with 0.5 M HCl (2 x 100 mL), sat. NaHCO₃ (2 x 100 mL) and brine (100 mL), dried over MgSO₄ and the solvent was evaporated off under reduced pressure and the product was crystallized from n-heptane / EtOAc to afford the title compound. LC-MS (Condition 5) tₚ = 1.37 min, m/z = 360.1, 362.1 [M+H]⁺; ¹H-NMR (400 MHz, MeOD) δ ppm 7.30 (d, J=8.80 Hz, 2 H) 7.47 (t, J=7.95 Hz, 1 H) 7.74 - 7.86 (m, 3 H) 7.93 (d, J=7.82 Hz, 1 H) 8.13 (s, 1 H).
Example 4

3-(5-Aminopyrazin-2-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

[00262] 3-Bromo-N-(4-(trifluoromethoxy)phenyl)benzamide  (Stage 3.1, 50 mg, 0.139 mmol), 5-(4,4,5,5-Tetramethyl-1,3,2-dioxaborolan-2-yl)pyrazin-2-amine (0.180 mmol), 2 M Na₂CO₃ (0.104 mL, 0.208 mmol), (Ph₃P)₄Pd (8 mg, 6.94 µmol), water (0.8 mL) and DME (2.4 mL) were added to a vial, which was sealed and subjected to MW irradiation at 150°C for 10 min. The RM was filtered through a PL-Thiol MP SPE cartridge (StratoSpheres™, 6 mL) and the cartridge was washed with MeOH (10 mL). The combined filtrates were evaporated to dryness under reduced pressure and the crude product was purified by preparative HPLC to afford the title compound. UPLC-MS (Condition 6) tᵣ = 1.84 min, m/z = 375.3 [M+H]⁺.

Example 5

3-(Pyrazin-2-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

[00263] A mixture of 3,3',3''-(1,3,5,2,4,6-trioxatriborinane-2,4,6-triyl)tris(N-(4-(trifluoromethoxy)phenyl)benzamide)  (Stage 5.1, 65 mg, 0.071 mmol), 2-bromopyrazine (63.6 mg, 0.4 mmol), Pd(PPh₃)₂Cl₂ (8.42 mg, 0.012 mmol), Na₂CO₃ (63.6 mg, 0.600 mmol), DME (299 µL), water (86 µL), and EtOH (42.8 µL) was stirred at 80°C for 16 h. The RM was cooled, diluted with THF (4 mL), stirred for 2 h with Si-Thiol (Silicycle, 118 mg, 0.150 mmol), filtered and the filtrate was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Redisep® Silica gel column, 12 g, cyclohexane / EtOAc, from 20% to 75% EtOAc) to afford the title compound as white needles. UPLC-MS (Condition 1) tᵣ = 2.66 min, m/z =360.0 [M+H]⁺, m/z =358.0 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.40
(d, J=8.6 Hz, 2 H) 7.67 - 7.77 (m, 1 H) 7.92 (d, J=9.0 Hz, 2 H) 8.08 (d, J=7.8 Hz, 1 H) 8.37 (d, J=7.8 Hz, 1 H) 8.67 - 8.71 (m, 2 H) 8.77 - 8.80 (m, 1 H) 9.38 (d, J=1.5 Hz, 1 H) 10.59 (s, 1 H).

[00264]  Stage 5.1  3,3',3''-(1,3,5,2,4,6-Trioxatriborinane-2,4,6-triyl)tris(N-(4-(trifluoromethoxy)phenyl)benzamide)

[00265]  To a solution of bis(2-dimethylaminoethyl)ether (174 µL, 0.923 mmol) in THF (1 mL) chilled at -15°C was added a solution of iPrMgCl, 1 M LiCl complex in THF (921 µL, 0.921 mmol) followed by 3-iodo-N-(4-(trifluoromethoxy)phenyl)benzamide  (Stage 1.1, 250 mg, 0.614 mmol) in THF (1 mL) after 30 min. After stirring for 30 min. at RT, trimethyl borate (548 µL, 4.91 mmol) was added at 0°C. Temperature was allowed to reach RT. The mixture was quenched with aq. 0.1 M HCl and extracted with EtOAc. The combined organic layers were washed with brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 12 g, DCM / MeOH, 1% to 10% MeOH) to afford the title compound as an amorphous white solid. UPLC-MS (Condition 1) tᵣ = 2.27 min, m/z = 326.0 [M+H]+, m/z = 324.0 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.34 (d, 2 H) 7.47 (m, 1 H) 7.85 (d, 2 H) 7.94 (m, 2 H) 8.19 (s, 2 H) 8.31 (s, 1 H) 10.39 (s, 1H).

Example 6  Methyl 4-(3-((4-(trifluoromethoxy)phenyl)carbamoyl)phenyl)thiophene-2-carboxylate
A mixture of 3-bromo-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 3.1, 50 mg, 0.139 mmol in 2.4 mL DME), methyl 4-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)thiophene-2-carboxylate (0.180 mmol), 2 M Na₂CO₃ (0.104 mL, 0.208 mmol), water (0.8 mL), and (Ph₃P)₄Pd (8 mg, 6.94 µmol) in a sealed vial were subjected to MW irradiation at 150°C for 10 min. The RM was filtered through a PL-Thiol MP SPE cartridge (StratoSpheres™, 6 mL), the cartridge was washed with MeOH (10 mL) and the combined filtrates were evaporated to dryness under reduced pressure to give the crude product was purified by preparative HPLC to afford the title compound. UPLC-MS (Condition 6) tᵣ = 2.37 min, m/z = 422.3 [M+H]+.

**Example 7**

3-(5-(Pyrrolidin-1-ylmethyl)thiophen-2-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

![Chemical structure]

3-Bromo-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 3.1, 50 mg, 0.139 mmol), l-((5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)thiophen-2-yl)methyl)pyrrolidine (0.180 mmol), (Ph₃P)₄Pd (8 mg, 6.94 µmol) 2 M Na₂CO₃ (0.104 mL, 0.208 mmol), water (0.8 mL) and DME (2.4 mL) were added to a vial, which was sealed and subjected to MW irradiation at 150°C for 600 sec (very high absorbance). The RM was filtered through a PL-Thiol MP SPE cartridge (StratoSpheres™, 6 mL), the cartridge was washed with MeOH (10 mL) and the combined filtrates were evaporated under reduced pressure to give the crude product was purified by preparative HPLC to afford the title compound. UPLC-MS (Condition 6) iᵣ = 1.92 min, m/z = 447.4 [M+H]+.

**Example 8**

3-((1H-Imidazol-1-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

![Chemical structure]
3-Iodo-N-(4-(trifluoromethoxy)phenyl)benzamide \textit{(Stage 1.1, 204 mg, 0.5 mmol)}, IH-imidazole (68.1 mg, 1 mmol), Cul (9.52 mg, 0.050 mmol), L-proline (11.51 mg, 0.100 mmol), K$_2$CO$_3$ (138 mg, 1.000 mmol) and DMSO (500 µL) were added to a vial, which was sealed, evacuated / purged with argon and the RM stirred at 90°C for 70 h. The RM was diluted with DCM / EtOAc, filtered and stirred with of Chelex® 100 (950 mg). The mixture was washed with sat. aq. Na$_2$CO$_3$, brine, dried over MgSO$_4$ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 12 g, DCM / MeOH + 1% N$_3$ OH from 2% B to 10% MeOH + 1% NH$_4$OH) to afford the title compound as an off white powder. UPLC-MS (Condition 1) $t_R = 1.55$ min, m/z = 348 [M+H]$^+$, m/z = 346.1 [M-H]$^-$; $^1$H-NMR (400 MHz, DMSO-d$_6$) $\delta$ ppm 7.16 (s, 1 H) 7.40 (d, J=8.8 Hz, 2 H) 7.69 (t, J=7.9 Hz, 1 H) 7.85 - 7.93 (m, 2 H) 7.90 (d, J=9.0 Hz, 3 H) 8.18 (s, 1 H) 8.37 (s, 1 H) 10.52 (s, 1 H).

**Example 9**

\[ \text{N-(3-Fluoro-4-((trifluoromethoxy)phenyl)-3-(pyrimidin-5-yl)benzamide} \]

\[
\begin{align*}
\text{F} & \quad \text{O} \\
\text{N} & \quad \text{O} \\
\text{N} & \quad \text{F}
\end{align*}
\]

The title compound was prepared in an analogous fashion to that described in Example 1 using N-(3-fluoro-4-((trifluoromethoxy)phenyl)-3-iodobenzamide \textit{(Stage 9.1)} and pyrimidin-5-ylboronic acid to afford the title compound as a white solid. UPLC-MS (Condition 1) $t_R = 2.63$ min, m/z =378.0 [M+H]$^+$, m/z =376.1 [M-H]$^-$; $^3$NMR (400 MHz, DMSO-de) $\delta$ ppm 7.56 - 7.64 (m, 1 H) 7.66 (dd, J=9.0, 1.2 Hz, 1 H) 7.70 - 7.76 (m, 1 H) 7.97 - 8.11 (m, 3 H) 8.36 (s, 1 H) 9.25 (s, 1 H) 9.26 (s, 2 H) 10.67 (s, 1 H).

**Stage 9.1** N-(3-Fluoro-4-((trifluoromethoxy)phenyl)-3-iodobenzamide

\[
\begin{align*}
\text{F} & \quad \text{O} \\
\text{N} & \quad \text{O} \\
\text{I} & \quad \text{N}
\end{align*}
\]
The title compound was prepared in an analogous fashion to that described in Stage 30.1 using 3-iodobenzoic acid and 3-fluoro-4-(trifluoromethoxy)aniline to afford the title compound as a white solid. UPLC-MS (Condition 1) \( t_R = 3.39 \text{ min} \), m/z 425.9 [M+H]+, m/z 423.9 [M-H]; \(^1\text{H}-\text{NMR} \) (400 MHz, DMSO-d\(_6\)) \( \delta \) ppm 7.32 - 7.40 (m, 1 H) 7.54 - 7.62 (m, 1 H) 7.64 (dd, 1 H) 7.93 - 8.01 (m, 3 H) 8.29 (s, 1 H) 10.64 (s, 1 H).

**Example 10**

\[
\text{N-(4-(Chlorodifluoromethoxy)phenyl)-3-(pyrimidin-5-yl)benzamide}
\]

A mixture of 3-pyrimidin-5-yl-benzoic acid (100 mg, 0.50 mmol) and SOCl\(_2\) (73 \( \mu \)L, 1.0 mmol) was heated under reflux for 4 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in DCM (5 mL) and slowly added to a mixture of 4-(chlorodifluoromethoxy)aniline (106 mg, 0.55 mmol) and TEA (140 \( \mu \)L, 1.0 mmol) in DCM (5 mL). The mixture was stirred at RT overnight. The solvent was evaporated off under reduced pressure and the residue was suspended in EtOAc (10 mL), filtered through a 10 \( \mu \)m Isolute\textsuperscript{®} fritted cartridge and the filtrate was evaporated to dryness under reduced pressure to give the crude product which was purified by preparative HPLC to afford the title compound. LC-MS (Condition 4) \( t_R = 1.15 \text{ min} \), m/z 375.8 [M+H]+; \(^1\text{H}-\text{NMR} \) (400 MHz, DMSO-d\(_6\)) \( \delta \) ppm 7.40 (d, \( J = 9.05 \text{ Hz} \), 2 H) 7.73 (t, \( J = 7.32 \text{ Hz} \), 1 H) 7.92 (m, 2 H) 8.06 (t, \( J = 6.97 \text{ Hz} \), 2 H) 8.37 (t, \( J = 1.96 \text{ Hz} \), 1 H) 9.24 - 9.29 (m, 3 H) 10.52 (s, 1 H).

**Example 11**

\[
\text{3-(Pyrimidin-5-yl)-N-(4-((trifluoromethyl)thio)phenyl)benzamide}
\]
A mixture of 3-pyrimidin-5-yl-benzoic acid (100 mg, 0.50 mmol) and SOCl₂ (73 µL, 1.0 mmol) was heated under reflux for 4 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in DCM (5 mL) and slowly added to a mixture of 4-((trifluoromethyl)thio)aniline (105 mg, 0.60 mmol) and TEA (140 µL, 1.0 mmol) in DCM (5 mL). The mixture was stirred at RT overnight. The solvent was evaporated off under reduced pressure and the residue was suspended in water (20 mL) filtered and dried under vacuum to afford the title compound.

**Example 12**

3-(Pyrimidin-5-yl)-N-(4-(2,2,2-trifluoroethyl)phenyl)benzamide

A mixture of 3-pyrimidin-5-yl-benzoic acid (100 mg, 0.50 mmol) SOCl₂ (73 µL, 1.0 mmol) was heated under reflux for 4 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in DCM (5 mL) and slowly added to a mixture of 4-(2,2,2-trifluoroethyl)aniline (105 mg, 0.60 mmol) and TEA (140 µL, 1.0 mmol) in DCM (5 mL). The mixture was stirred at RT overnight. The solvent was evaporated off under reduced pressure and the residue was suspended in water (20 mL) filtered and dried under vacuum to afford the title compound.

**Example 13**

3-(2-Methoxypyrimidin-5-yl)-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide
3-Iodo-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 13.1, 84 mg, 0.2 mmol), 2-methoxypyrimidin-5-ylboronic acid (61.6 mg, 0.4 mmol), Na₂CC>3 (63.6 mg, 0.600 mmol), Pd(PPh₃)₂Cl₂ (7.02 mg, 10.00 µην), water (200 µL), EtOH (133 µL) and DME (1 mL) were added to a vial, which was sealed, evacuated / purged with argon and subjected to MW irradiation at 125°C for 20 min. The RM was diluted with THF (1 mL) and stirred with Si-Thiol (69.4 mg, 0.100 mmol) for 2 h. The filtrate was evaporated to dryness under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 4 g, DCM / MeOH + 1% NH₄OH, gradient from 1% to 15% MeOH + 1% NH₄OH) to afford the title compound as a beige solid. UPLC-MS (Condition 1) tᵣ = 2.89 min, m/z = 404.1 [M+H]⁺, m/z = 402.2 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 2.35 (s, 3 H) 3.99 (s, 3 H) 7.37 (d, J=8.6 Hz, 2 H) 7.52 (d, J=8.1 Hz, 1 H) 7.88 (d, J=9.3 Hz, 2 H), 7.90 (br. s, br. s, 1 H) 7.93 (dd, 1 H) 8.74 (s, 2 H) 10.36 (s, 1 H).

Stage 13.1 3-Iodo-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide

DIPEA (4.00 mL, 22.90 mmol) was added to a solution of 3-iodo-4-methylbenzoic acid (2 g, 7.63 mmol) and 2-(6-chloro-1H-benzotriazole-1-yl)-1,1,3,3-tetramethylammonium hexafluorophosphate (HCTU, 3.47 g, 8.40 mmol) in THF (18 mL) and NMP (2 mL) and the RM was stirred at RT for 30 min. 4-(Trifluoromethoxy)aniline (1.536 mL, 11.45 mmol) was then added and the RM was stirred at RT for 14 h. The solvent was evaporated off under reduced pressure and the residue was treated with aq. 1M HCl (50 mL) and extracted with TBME. The combined extracts were washed with aq. 1M HCl (50 mL), aq. sat. Na₂CO₃, water, brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give a residue which was crystallized from n-heptane / EtOAc to afford the title compound as white
needles. UPLC-MS (Condition 1) t_R = 3.42 min, m/z = 421.9-422.9 [M+H]^+, m/z = 419.9-420.9 [M-H]; ^1H-NMR (400 MHz, DMSO-d_6) δ ppm 2.44 (s, 3 H) 7.36 (d, J=8.3 Hz, 2 H) 7.49 (d, J=8.3 Hz, 1 H) 7.83-7.93 (m, 3 H) 8.39 (d, J=2.0 Hz, 1 H) 10.42 (s, 1 H).

**Example 14**

4-Methyl-3-(pyrimidin-5-vin-N-(4-(trifluoromethoxy)phenyl)benzamide

![Structure](Structure.png)

[00278] The title compound was prepared in an analogous fashion to that described in Example 1 using 3-iodo-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 13.1) and pyrimidin-5-ylboronic acid to afford a yellow oil. UPLC-MS (Condition 1) t_R = 2.62 min, m/z = 374.0 [M+H]^+, m/z = 372.0 [M-H]; ^1H-NMR (400 MHz, DMSO-d_6) δ ppm 2.36 (s, 3 H) 7.37 (d, J=8.6 Hz, 2 H) 7.55 (d, J=8.1 Hz, 1 H) 7.88 (d, J=9.0 Hz, 2 H) 7.95 (s, 1 H) 7.98 (d, J=8.1 Hz, 1 H) 8.97 (s, 2 H) 9.26 (s, 1 H) 10.40 (s, 1 H).

**Example 15**

4-Methyl-3-(pyridin-3-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

![Structure](Structure.png)

[00279] The title compound was prepared in an analogous fashion to that described in Example 13 using 3-iodo-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 13.1) and pyrimidin-3-ylboronic acid to afford a yellow oil. UPLC-MS (Condition 1) t_R = 2.27 min, m/z = 373.0 [M+H]^+, m/z = 371.1 [M-H]; ^1H-NMR (400 MHz, DMSO-d_6) δ ppm 2.32 (s, 3 H) 7.36 (d, J=8.6 Hz, 2 H) 7.49-7.55 (m, 2 H) 7.83-7.92 (m, 2 H) 7.83-7.92 (m, 2 H) 7.94 (dd, J=7.8, 1.7 Hz, 1 H) 8.63 (dd, J=4.8, 1.3 Hz, 1 H) 8.67 (d, J=1.7 Hz, 1 H) 10.37 (s, 1 H).

**Example 16**

3-(1H-Imidazol-1-yl)-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide
A mixture of 3-iodo-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide (100 mg, 0.237 mmol), imidazole (64.6 mg, 0.95 mmol), Cul (9.04 mg, 0.048 mmol), L-proline (10.94 mg, 0.094 mmol), K$_2$CO$_3$ (131.2 mg, 0.95 mmol) and DMSO (250 µL) were stirred under argon for 66 h at 90°C. The RM was cooled to, diluted with DCM/EtOAc, filtered, washed with 10% aq. NaCO$_3$ solution and brine, dried over MgSO$_4$ and the solvent was evaporated off under reduced pressure to give a residue which was purified by flash chromatography (RediSep® 4 g silica gel, DCM/MeOH + 1% NH$_3$ from 0% B to 10% DCM/MeOH + 1% NH$_3$) to afford the title compound. UPLC-MS (Condition 2) $t_R$ = 0.9 min, m/z = 362.2 [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-$d_6$) δ ppm 2.23 (s, 3 H) 7.12 (d, J = 0.78 Hz, 1 H) 7.36 (d, J = 8.99 Hz, 2 H) 7.49 (d, J = 0.78 Hz, 1 H) 7.58 (d, J = 7.82 Hz, 1 H) 7.84 - 7.90 (m, 2 H) 7.90 - 7.93 (m, 1 H) 7.93 - 7.95 (m, 1 H) 7.98 (dd, J = 7.82, 1.56 Hz, 1 H) 10.41 (s, 1 H).

**Example 17**

4-Methyl-3-(thiazol-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

3-Iodo-4-methyl-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 13.1, 100 mg, 0.237 mmol), thiazole (60 mg, 0.712 mmol), KOAc (69.9 mg, 0.712 mmol) and Pd(OAc)$_2$ (0.267 mg, 1.187 µmol) were added to a vial, which was sealed, evacuated / purged with argon. DMA (720 µL) was added and the RM was stirred at 130°C for 2.5 days. The RM was diluted with THF (3 mL), stirred overnight with Si-Thiol (1.44 mmol/g, 16.49 mg, 0.024 mmol) and filtered. The filtrate was treated with 2 M HCl (40 mL) and extracted with TBME. The combined extracts were washed with 1 M HCl, sat. NaHCO$_3$, brine, dried over Na$_2$S$_2$O$_4$ and the solvent was evaporated off under reduced pressure to give a residue which was purified by preparative SFC (Column NH$_2$ from 10% to 15% in 2.4 min) to afford the title compound as a colorless solid. UPLC-MS
(Condition 2) $t_R = 1.18$ min, m/z = 379.2 [M+H]$^+$, m/z = 377.2 [M-H]$^-$; $^1$H-NMR (400 MHz, DMSO-d$_6$) δ ppm 2.44 (s, 3 H) 7.37 (d, J=8.31 Hz, 2 H) 7.54 (d, J=8.07 Hz, 1 H) 7.86 - 7.91 (m, 2 H) 7.93 (dd, J=7.82 Hz, 1.96 Hz, 1 H) 8.02 (d, J=1.96 Hz, 1 H) 8.10 (d, J=0.73 Hz, 1 H) 9.23 (d, J=0.73 Hz, 1 H) 10.43 (s, 1 H).

**Example 18-34**

The following examples were prepared in an analogous fashion to that described in Example 13 using the Stage as indicated.

**[00283]** Stage 18.1 3-Bromo-4-fluoro-N-(4-(trifluoromethoxy)phenyl)benzamide
SOCl₂ (2.92 mL, 40.0 mmol) and DMF (0.5 mL) were added dropwise to a suspension of 3-bromo-4-fluorobenzoic acid (1.752 g, 8 mmol) in toluene (20 mL) and the RM was stirred at 80°C for 1 h. The solvent was evaporated off under reduced pressure and the residue was diluted with THF (15 mL). DIPEA (2.79 mL, 16.00 mmol) was added and the mixture was cooled to 0°C, treated with a solution of 4-trifluoromethoxyaniline (1.181 mL, 8.80 mmol) in THF (5 mL) and stirred for 1 h. The RM was treated with aq. sat. 1 M HCl (50 mL), and extracted with TBME. The combined extracts were washed with aq. 1 M HCl, aq. 1 M NaOH and brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give a residue was crystallized from n-heptane / DCM to afford the title compound as a white solid.

UPLC-MS (Condition 1) tᵣ = 3.18 min, m/z = 377.9, 379.9 [M+H]+, m/z = 375.9, 377.9 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.38 (d, J = 8.6 Hz, 2 H) 7.56 (t, J = 8.7 Hz, 1 H) 7.87 (d, J = 9.0 Hz, 2 H) 8.00 - 8.06 (m, 1 H) 8.32 (dd, J = 6.6, 2.2 Hz, 1 H) 10.50 (s, 1 H).

**Stage 24.1** 3-Bromo-4-chloro-N-(4-(trifluoromethoxy)phenyl)benzamide

[00285]

The title compound was prepared in an analogous fashion to that described in Stage 18.1 using 3-bromo-4-chlorobenzoic acid and 4-(trifluoromethoxy)aniline to afford an off-white solid. UPLC-MS (Condition 1) tᵣ = 3.38 min, m/z = 393.9-395.8 [M+H]+, m/z = 391.9-393.9 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.38 (d, J = 8.3 Hz, 2 H) 7.82 (d, J=8.3 Hz, 1 H) 7.87 (d, J=9.0 Hz, 2 H) 7.97 (dd, J=8.4, 2.1 Hz, 1 H) 8.34 (d, J=2.2 Hz, 1 H) 10.55 (s, 1 H).

**Stage 30.1** 3-Bromo-4-methoxy-N-(4-(trifluoromethoxy)phenyl)benzamide

The title compound was prepared in an analogous fashion to that described in Stage 18.1 using 3-bromo-4-methoxybenzoic acid to afford the title compound as a white solid. UPLC-MS (Condition 1) tᵣ = 3.08 min, m/z = 389.9-391.9 [M+H]+, m/z = 388.0-390.0 [M-H]⁻; ¹H-
NMR (400 MHz, DMSO-$d_6$) δ ppm 3.94 (s, 3 H) 7.26 (d, $J$=8.8 Hz, 1 H) 7.36 (d, $J$=8.6 Hz, 2 H) 7.87 (d, $J$=9.0 Hz, 2 H) 8.02 (dd, $J$=8.6, 2.2 Hz, 1 H) 8.23 (d, $J$=2.2 Hz, 1 H) 10.35 (s, 1 H).

**Example 35**

3-(Benzo[d][1,3]dioxol-5-yl)-4-methoxy-N-(4-(trifluoromethoxy)phenyl)benzamide

![Structure of 3-(Benzo[d][1,3]dioxol-5-yl)-4-methoxy-N-(4-(trifluoromethoxy)phenyl)benzamide]

[00289] 3-Bromo-4-methoxy-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 30.1, 60 mg, 0.154 mmol), benzo[d][1,3]dioxol-5-ylboronic acid (33.2 mg, 0.200 mmol), (Ph$_3$P)$_4$Pd (9 mg, 6.94 µmol), 2 M Na$_2$CO$_3$ (0.115 mL, 0.231 mmol), DME (2.4 mL) and water (0.8 mL) were subjected to MW irradiation at 150°C for 10 min. The RM was filtered through a PL-Thiol MP SPE cartridge (StratoSpheres™, 6 mL), the cartridge was washed with MeOH (10 mL) and the combined filtrates were evaporated under reduced pressure to give the crude product was purified by preparative HPLC to afford the title compound. UPLC-MS (Condition 6) $t_R$ = 2.37 min, m/z = 432.3 [M+H]$^+$.  

**Example 36**

3-(5-Acetylthiophen-2-yl)-4-methoxy-N-(4-(trifluoromethoxy)phenyl)benzamide

![Structure of 3-(5-Acetylthiophen-2-yl)-4-methoxy-N-(4-(trifluoromethoxy)phenyl)benzamide]

[00290] The title compound was prepared in an analogous fashion to that described in Example 35 using (5-acetylthiophen-2-yl)boronic acid to afford the title compound. UPLC-MS (Condition 6) $t_R$ = 2.29 min, m/z = 436.3 [M+H]$^+$.  

**Example 37**

4-(2-Morpholinoethoxy)-3-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide
A suspension of 3-bromo-4-hydroxy-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 37.1, 60 mg, 0.16 mmol) 4-(2-chloroethyl)morpholine (28.6 mg, 0.191 mmol), KI (2.65 mg, 0.016 mmol) and powdered K₂CO₃ (132 mg, 0.957 mmol) in acetone (250 µL) was stirred at 80°C for 16 h and the solvent was evaporated off under reduced pressure. The residue, together with pyrimidin-5-ylboronic acid (59.3 mg, 0.479 mmol), Pd(PPh₃)₂Cl₂ (11.20 mg, 0.016 mmol), water (160 µL), EtOH (80 µL) and DME (600 µL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 80°C for 16 h. The RM was diluted with THF (3 mL) then stirred with Si-Thiol (Silicycle, 62.8 mg, 0.080 mmol) for 2 h, filtered and the filtrate was evaporated off under reduced pressure to give the crude product was purified by preparative HPLC (Condition 8, 40% for 0.2 min then 40% to 70% in 14 min) the title compound as a white solid. UPLC-MS (Condition 1) tᵣ = 1.70 min, m/z = 489.0 [M+H]⁺, m/z = 487.1 [M-H]⁻ ; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 2.94 - 4.21 (m, 10 H) 4.45 - 4.59 (m, 2 H) 7.33 - 7.44 (m, 3 H) 7.89 (d, J=9.3 Hz, 2 H) 8.10 - 8.17 (m, 2 H) 9.08 (s, 2 H) 9.23 (s, 1 H) 10.16 (br. s, br. s, 1 H) 10.37 (s, 1 H).

Stage 37.1 3-Bromo-4-hydroxy-N-(4-(trifluoromethoxy)phenyl)benzamide

SOCl₂ (8.41 mL, 115 mmol) was added to a suspension of 3-bromo-4-hydroxybenzoic acid (5 g, 23.04 mmol) in toluene (50 mL) and the RM was stirred at 80°C for 2.5 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in THF (25 mL). DIPEA (8.05 mL, 46.1 mmol) was added and the RM was cooled to 0°C, treated with a solution of 4-trifluoromethoxyaniline (3.40 mL, 25.3 mmol) in THF (5 mL) and stirred for 1 h. The RM was treated with 4M NaOH (23.04 mL, 92 mmol), heated at 100°C for 3 h and the solvent was evaporated off under reduced pressure. The residue was treated with aq. HCl (50 mL
of 1M), and extracted with TBME / EtOAc (1:1). The combined extracts were washed with sat.
aq. NaHCO₃ and brine, dried over MgSO₄ and the solvent was evaporated off under reduced
pressure to give the crude product was purified by flash chromatography (Silica gel column, 100
g, DCM / EtOAc from 0% to 20EtOAc) and crystallized from cyclohexane / DCM to afford the
title compound as a beige solid. UPLC-MS (Condition 1) tᵣ = 2.70 min, m/z = 375.9/377.8
[M+H]+, m/z = 374.0/375.9 [M-H]; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.05 (d, J=8.6 Hz, 1 H)
7.35 (d, J=8.6 Hz, 2 H) 7.80 - 7.90 (m, 3 H) 8.17 (d, J=2.2 Hz, 1 H) 10.26 (s, 1 H) 11.03 (s, 1
H).

Example 38

4-(2-Hydroxyethoxy)-3-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

![Structure of 4-(2-Hydroxyethoxy)-3-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide]

[00294] A suspension of 3-bromo-4-hydroxy-N-(4-(trifluoromethoxy)phenyl)benzamide
(50 mg, 0.133 mmol), 2-bromoethyl acetate (21.94 µL, 0.199 mmol) and powdered K₂CO₃ (92
mg, 0.665 mmol) in acetonitrile (500 µL) was stirred at 75°C for 16 h and the solvent was evaporated
off under reduced pressure. The residue, together with pyrimidin-5-ylboronic acid (57.61 mg,
0.465 mmol), Pd(PPh₃)₂Cl₂ (18.66 mg, 0.026 mmol) water (125 µL), EtOH (62 µL) and DME
(550 µL) were added to a vial, which was sealed, evacuated / purged with argon and the RM
stirred at 80°C for 20 h. The RM was diluted with THF (3 mL) then stirred with Si-Thiol
(Silicycle, 105 mg, 0.133 mmol) for 2 h, filtered and the filtrate was evaporated off under reduced
pressure to give the crude product which was purified by flash chromatography (Silica gel
column, 12 g, cyclohexane / EtOAc from 30% to 95% EtOAc) to afford the acylated product,
which was treated with aq. 4 M NaOH (138 µL, 0.552 mmol) and MeOH (250 µL) at and stirred
at RT for 4 h. The RM was acidified with TFA and purified by preparative HPLC (Condition 8,
50% for 0.2 min then 50% to 80% in 14 min) to afford the title compound as a beige solid.
UPLC-MS (Condition 1) tᵣ = 2.24 min, m/z = 420.0 [M+H]+, m/z = 418 [M-H]; ¹H-NMR (400 MHz,
DMSO-d₆) δ ppm 3.64 - 3.82 (m, 2 H) 4.21 (t, J=4.6 Hz, 2 H) 4.91 (t, J=5.4 Hz, 1 H) 7.32 - 7.41
Example 39

4-(2-(4-Isobutylpiperazin-1-yl)ethoxy)-3-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

Example 40

3-(Pyrimidin-5-yl)-4-(2-(pyrrolidin-1-yl)ethoxy)-N-(4-(trifluoromethoxy)phenyl)benzamide

[00295] The title compound was prepared in an analogous fashion to that described in Example 37 using 3-bromo-4-hydroxy-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 37.1) and 1-(2-chloroethyl)-4-isobutylpiperazine to afford a beige solid. UPLC-MS (Condition 1) t<sub>R</sub> = 1.98 min, m/z = 544.1 [M+H]<sup>+</sup>, m/z = 542.1 [M-H]<sup>-</sup>; <sup>1</sup>H-NMR (400 MHz, DMSO-d<sub>6</sub>) δ ppm 0.83 (d, J=6.6 Hz, 6 H) 1.69 - 1.78 (m, 1 H) 1.94 - 2.07 (m, 2 H) 2.26 - 2.38 (m, 4 H) 2.38 - 2.48 (m, 4 H) 2.67 (t, J=4.6 Hz, 2 H) 4.25 (t, J=5.4 Hz, 2 H) 7.34 - 7.41 (m, 3 H) 7.88 (d, J=9.0 Hz, 2 H) 8.07 (dd, J=8.8, 2.2 Hz, 1 H) 8.12 (d, J=2.2 Hz, 1 H) 9.14 (s, 2 H) 9.18 (s, 1 H) 10.33 (s, 1 H).

Example 40

3-(Pyrimidin-5-yl)-4-(2-(pyrrolidin-1-yl)ethoxy)-N-(4-(trifluoromethoxy)phenyl)benzamide

[00296] The title compound was prepared in an analogous fashion to that described in Example 37 using 3-bromo-4-hydroxy-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 37.1) and 1-(2-chloroethyl)pyrrolidine to afford a solid. UPLC-MS (Condition 1) t<sub>R</sub> = 1.82 min, m/z = 473.1 [M+H]<sup>+</sup>, m/z = 471.1 [M-H]<sup>-</sup>; <sup>1</sup>H-NMR (400 MHz, DMSO-d<sub>6</sub>) δ ppm 1.62 - 1.73 (m, 4 H) 2.51 - 2.60 (m, 4 H) 2.77 - 3.00 (m, 2 H) 4.21 - 4.35 (m, 2 H) 7.33 - 7.41 (m, 3 H) 7.88 (d, J=9.0 Hz, 2 H) 8.08 (dd, J=8.8, 2.2 Hz, 1 H) 8.11 (d, J=2.0 Hz, 1 H) 9.10 (s, 2 H) 9.18 (s, 1 H) 10.33 (s, 1 H).
Example 41

4-Hydroxy-3-\(^{\text{6}}\)pyrimidin-5-ylN-(4-(trifluoromethoxy)phenyl)benzamide

[00297] BBr\(_3\) 1 M in DCM (3.85 mL, 3.85 mmol) was added dropwise to a stirred solution of 4-methoxy-3-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide (100 mg, 0.257 mmol) in DCM (1.027 mL) at -70°C and then stirred at RT for 2.5 days and under reflux for 2 days. The RM was treated with MeOH and the solvent was evaporated off under reduced pressure to give the crude product was purified by preparative HPLC (Condition 8, 50% for 0.2 min then 50% to 100% in 15 min) to yield the title compound as a white solid. UPLC-MS (Condition 1) \(t_R = 2.29\) min, \(m/z = 376.0\) [M+H]+, \(m/z = 374.0\) [M-H]-; \(^1\)H-NMR (400 MHz, DMSO-d\(_6\)) \(\delta\) ppm: 7.13 (d, \(J=8.6\) Hz, 1 H), 7.36 (d, \(J=8.6\) Hz, 2 H), 7.87 (d, \(J=9.0\) Hz, 2 H), 7.93 (dd, \(J=8.6, 2.2\) Hz, 1 H), 8.09 (d, \(J=2.0\) Hz, 1 H), 9.09 (s, 2 H), 9.17 (s, 1 H), 10.24 (s, 1 H), 10.82 (br. s, br. s, 1 H).

Example 42

5-(Pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00298] The title compound was prepared in an analogous fashion to that described in Example 1 using 5-bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 42.1) and pyrimidin-5-ylboronic acid to afford an off-white solid. UPLC-MS (Condition 1) \(t_R = 2.09\) min, \(m/z = 361.0\) [M+H]+, \(m/z = 359.0\) [M-H]-; \(^1\)H-NMR: (400 MHz, DMSO-d\(_6\)) \(\delta\) ppm: 7.41 (d, \(J=8.56\) Hz, 1 H), 7.90 (d, 1 H), 8.72 (t, \(J=2.20\) Hz, 1 H), 9.16 (dd, 1 H), 9.23 (dd, 1 H), 9.29 (s, 1 H), 9.32 (s, 2 H), 10.67 (s, 1 H).

[00299] Stage 42.1 5-Bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide
SOCl₂ (10.84 mL, 148.5 mmol) was added to a suspension of 5-bromonicotinic acid (5 g, 24.75 mmol) in DCM (60 mL) and the RM was stirred at RT overnight. The solvent was evaporated off under reduced pressure and the residue was dissolved in DCM (40 mL), the mixture was cooled to 0°C under a nitrogen atmosphere, DIPEA (8.65 mL, 49.5 mmol) was added dropwise, followed with a solution of 4-trifluoromethoxyaniline (3.65 mL, 27.2 mmol) in DCM (20 mL). The RM was stirred for 2 h, treated with sat. aq. Na₂CO₃ (100 mL), and extracted EtOAc. The combined extracts were washed with sat. solution of KH₂PO₄ (pH = 4), brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give a residue which was recrystallized from n-heptane / EtOAc to afford the title compound as beige needles. UPLC-MS (Condition 1) tₚ = 2.71 min, m/z = 360.9-362.9 [M+H]⁺, m/z = 358.9-361.0 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.40 (d, J=8.3 Hz, 2 H) 7.87 (d, 2 H) 8.55 (t, J=2.1 Hz, 1 H) 8.93 (d, J=2.2 Hz, 1 H) 9.07 (d, J=1.7 Hz, 1 H) 10.67 (s, 1 H).

Example 43

6-Methyl-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

Stage 43.1

The title compound was prepared in an analogous fashion to that described in Example 40 using 5-chloro-6-methyl-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 43.1) and pyrimidin-5-ylboronic acid. UPLC-MS (Condition 1) tₚ = 2.10 min, m/z = 375.0 [M+H]⁺, m/z = 373.0 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.40 (s, 3 H) 7.40 (d, J=8.80 Hz, 2 H) 7.88 (d, J=9.29 Hz, 2 H) 8.30 (d, J=2.20 Hz, 1 H) 9.03 (s, 2 H) 9.08 (d, J=2.20 Hz, 1 H) 9.29 (s, 1 H) 10.55 (s, 1 H).

Stage 43.1

5-Chloro-6-methyl-N-(4-(trifluoromethoxy)phenyl)nicotinamide
5,6-dichloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 43.2, 500 mg, 1.424 mmol), trimethylboroxime (179 mg, 1.424 mmol), Pd(PPh3)4, (165 mg, 0.142 mmol), K2CO3 (295 mg, 2.136 mmol) and dioxane (4069 µL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 110°C for 72 h. The RM was filtered through a pad of Celite®, which was washed with EtOAc. The combined filtrates were evaporated to dryness under reduced pressure and the residue was purified by flash chromatography (Silica gel column, 24 g, cyclohexane / EtOAc-EtOH (9:1) + 0.1% NH4OH, gradient from 5% to 25% EtOAc-EtOH (9:1) + 0.1% NH4OH) and recrystallized from cyclohexane / EtOAc to afford the title compound as a light yellow solid. UPLC-MS (Condition 1) tR = 2.76 min, m/z = 331.0 [M+H]+, m/z = 329.0 [M-H]; 1H-NMR (400 MHz, DMSO-d6) δ ppm 2.64 (s, 3 H) 7.39 (d, J=9.05 Hz, 2 H) 7.87 (d, J=9.05 Hz, 2 H) 8.38 (d, J=1.71 Hz, 1 H) 8.94 (d, J=1.96 Hz, 1 H) 10.60 (s, 1 H).

Example 44

6-(3,6-Dihydro-2H-pyran-4-yl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide
5-Bromo-6-(3,6-dihydro-2H-pyran-4-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.1, 160 mg, 0.361 mmol), pyrimidin-5-ylboronic acid (89 mg, 0.722 mmol), Pd(PPh₃)₄Cl₂ (25 mg, 0.036 mmol), aq. 2 M NaHCO₃ (0.541 mL, 1 mmol) and DME (1.5 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 90°C for 1.5 h. The RM was diluted with EtOAc, washed with brine, dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (RediSep® Silica gel column, DCM/MeOH from 2 to 5% MeOH) and treated with Si-Thiol (90 mg) in MeOH to afford the title product as a solid. HPLC (Condition 3) t_R = 4.99 min, UPLC-MS (Condition 2) m/z = 443.2 [M+H]+; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 2.39 - 2.60 (m, 2 H) 3.74 (t, J = 5.47 Hz, 2 H) 3.90 - 4.00 (m, 2 H) 5.58 (s, 1 H) 7.39 (d, J = 8.99 Hz, 2 H) 7.77 - 7.92 (m, 2 H) 8.40 (d, J = 1.96 Hz, 1 H) 8.94 (s, 2 H) 9.12 (d, J = 1.00 Hz, 1 H) 9.21 (s, 1 H) 10.60 (s, 1 H).

Stage 44.1 5-Bromo-6-(3,6-dihydro-2H-pyran-4-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

5-Bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 462 mg, 1.11 mmol), 2-(3,6-dihydro-2H-pyran-4-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (262 mg, 1.22 mmol), Pd(Ph₃)₄ (64.1 mg, 0.056 mmol), Na₂CO₃ (3 mL of 2 M, 5.99 mmol), EtOH (1 mL) and toluene (3 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 70°C for 18 h. The RM was diluted with EtOAc, washed with brine, dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (RediSep® Silica gel column, 12 g, n-
heptane / EtOAc, from 10% B to 100% EtOAc) to afford the title compound. HPLC (Condition 3) $t_R = 6.04$ min, UPLC-MS (Condition 2) $m/z = 443.1$ [M+H]⁺.

Stage 44.2 5-Bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide

SOCl₂ (1.089 mL, 14.92 mmol) and DMF (0.01 mL) were added dropwise to a suspension of 5-bromo-6-chloronicotinic acid (1.176 g, 4.97 mmol) in toluene (10 mL) and the PdM was stirred at 85°C for 2 h. The solvent was evaporated off under reduced pressure and the residue was diluted with THF (10 mL). DIPEA (1.74 mL, 9.95 mmol) was added and the mixture was cooled to -15°C under argon atmosphere, treated with a solution of 4-trifluoromethoxyaniline (0.701 mL, 5.22 mmol) in THF (10 mL) and stirred at RT for 1 h. The solvent was off under reduced pressure and the residue was treated with aq. 1M HCl (50 mL), and extracted with TBME / EtOAc (4:1). The combined extracts were washed with aq. 1 M HCl, sat. aq. Na₂CO₃ and brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give the crude product was purified by flash chromatography (Biotage Silica gel column, 50 g, cyclohexane / EtOAc from 5% to 25% EtOAc) to afford the title compound as an off-white solid. UPLC-MS (Condition 1) $t_R = 3.09$ min, $m/z = 394.9/396.8$ [M+H]⁺, $m/z = 393.0/394.9$ [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.40 (d, $J = 8.6$ Hz, 2 H) 7.86 (d, $J = 9.0$ Hz, 2 H) 8.73 (d, $J = 2.2$ Hz, 1 H) 8.92 (d, $J = 2.0$ Hz, 1 H) 10.69 (s, 1 H).

Example 45

5-(Pyrimidin-5-yl)-6-(tetrahydro-2 h-pyran-4-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

A solution of 6-(3,6-dihydro-2 h-pyran-4-yl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Example 44, 80 mg, 0.180 mmol) in acetic acid (5 mL)
was hydrogenated in the presence of PtCl₂ (16 mg) at RT and atmospheric pressure for 67 h. The RM was filtered through Celite® and the solvent was evaporated off under reduced pressure to give the crude product which was purified by reverse phase chromatography (MPLC, Lichroprep® 15-25 μm column, water + 0.1% formic acid /MeCN + 0.1% formic acid, gradient 5% to 39% MeCN + 0.1% formic acid). Fractions containing the pure product were combined, basified with NaHCO₃ and extracted with EtOAc. The combined extracts were dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to give a residue which was purified by preparative TLC (Silica gel 60 F 254, 0.5 mm, eluent was DCM / MeOH 19:1). The product was dissolved with MeCN, filtered and the filtrate was evaporated off under reduced pressure to afford the title compound as white crystalline solid. HPLC (Condition 3) tᵣ = 5.09 min, UPLC-MS (Condition 2) m/z = 444.4 [M+H]⁺; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 1.54 - 1.65 (m, 2 H) 1.85 - 2.02 (m, 2 H) 2.88 - 3.03 (m, 1 H) 3.19 - 3.28 (m, 2 H) 3.80 - 3.93 (m, 2 H) 7.37 (d, J = 8.99 Hz, 2 H) 7.86 (m, J = 9.00 Hz, 2 H) 8.23 (d, J = 1.96 Hz, 1 H) 8.96 (s, 2 H) 9.15 (d, J = 1.95 Hz, 1 H) 9.30 (s, 1 H) 10.56 (s, 1 H).

**Example 46**

6-(4-Cyanotetrahydro-2H-pyran-4-yl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00312] KHMDS 1 M in THF (0.758 mL) was added dropwise to a mixture of 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 100 mg, 0.253 mmol) and tetrahydro-2H-pyran-4-carbonitrile (42.1 mg, 0.379 mmol) in THF (2.5 mL), under a nitrogen atmosphere. The RM was stirred at -70°C for 1 h, and allowed to warm to RT overnight. The RM was quenched with water and the solvent was evaporated off under reduced pressure to afford 5-bromo-6-(4-cyanotetrahydro-2H-pyran-4-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide, of which (50 mg, 0.106 mmol), Pd(Ph₃P)₄ (18 mg, 0.016 mmol), pyrimidin-5-ylboronic acid (20 mg,
0.159 mmol), K$_3$PO$_4$ (68 mg, 0.319 mmol) and toluene (1.3 mL) were added to a vial, which was sealed, evacuated / purged with argon. The RM was stirred at 110°C for 3 h, diluted with MeOH, filtered through a cartridge PL-Thiol MP-Resin and concentrated the combined filtrates were evaporated to dryness under reduced pressure. The crude product was purified by preparative SFC (Column 2-EP, gradient: 6% to 11% in 6 min) and lyophilized to afford an off-white powder.

UPLC-MS (Condition 2) $t_r$ = 1.2 min, m/z = 469.9 [M+H]$^+$; $^1$H-NMR (600 MHz, DMSO-d$_6$) $\delta$ ppm 2.00 (d, J=13.55 Hz, 2 H) 2.40 (td, J=13.08, 3.95 Hz, 2 H) 3.52 (t, J=12.14 Hz, 2 H) 3.94 (d, J=8.66 Hz, 2 H) 7.39 (d, J=8.66 Hz, 2 H) 7.86 (d, J=8.85 Hz, 2 H) 8.30 (s, 1 H) 8.96 (s, 2 H) 9.23 (d, J=1.13 Hz, 1 H) 9.32 (s, 1 H) 10.67 (s, 1 H).

Example 47

6-(2-Cyanopropan-2-yl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00313] KHMDS 1 M in THF (1.517 mL) was added dropwise to a mixture of 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 200 mg, 0.506 mmol) and isobutyronitrile (52 mg, 0.758 mmol) in THF (5 mL) at -78°C under a nitrogen atmosphere. The RM was stirred at -70°C for 1 h, and allowed to warm to RT overnight. The RM was quenched with water and extracted with EtOAc. The combined extracts were dried over Na$_2$SO$_4$, filtered and the filtrate was evaporated off under reduced pressure. The residue was purified by flash chromatography (RediSep® Silica gel column, 24 g, EtOAc / n-hexane, isocratic 1:3) to afford 5-bromo-6-(2-cyanopropan-2-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide, of which (122 mg, 0.285 mmol) together with pyrimidine-5-boronic acid (53 mg, 0.427 mmol), Na$_2$CO$_3$ (0.427 mL, 0.855 mmol), PdCl$_2$(dppf) (11 mg, 0.014 mmol) and dioxane (1.6 mL) were added to a vial, which was sealed, evacuated / purged with argon. The RM was stirred at 90°C for 3 h, cooled to RT, treated with water and extracted with EtOAc. The combined extracts were dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure to give the crude product which was
purified by flash chromatography (RediSep® Silica gel column, 24 g, MeOH / DCM, isocratic 5:95) to afford the title product as a yellow solid. UPLC-MS (Condition 2) t_R = 1.05 min, m/z = 428.0 [M+H]^+; ^1H-NMR (400 MHz, DMSO-d_6) δ ppm 1.72 (s, 6 H) 7.38 (d, J=8.99 Hz, 2 H) 7.80 - 7.91 (m, 2 H) 8.26 (d, J=1.96 Hz, 1 H) 8.96 (d, J=0.78 Hz, 2 H) 9.18 (d, J=1.95 Hz, 1 H) 9.30 (s, 1 H) 10.64 (s, 1 H).

Example 48

6-(1-Cyanocyclobutyl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00314] The title compound was prepared in an analogous fashion to that described in Example 47 using cyclobutanecarbonitrile to afford the title compound as an off-white powder. UPLC-MS (Condition 2) t_R = 1.07 min, m/z = 440.0 [M+H]^+; ^1H-NMR (400 MHz, DMSO-d_6) δ ppm 1.77 - 1.87 (m, 1 H) 2.11 - 2.23 (m, 1 H) 2.23 - 2.32 (m, 2 H) 2.68 - 2.81 (m, 2 H) 7.34 - 7.44 (m, 2 H) 7.86 (d, J=9.38 Hz, 2 H) 8.33 - 8.41 (m, 1 H) 8.91 (s, 2 H) 9.16 - 9.23 (m, 1 H) 9.32 (s, 1 H) 10.63 - 10.70 (m, 1 H).

Example 49

6-Methoxy-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00315] A solution of 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 60 mg, 0.152 mmol) and NaOMe (24.58 mg, 0.455 mmol) in anhydrous MeOH (250 µL) was stirred for 2 h at 80°C in a sealed MW vial. Pyrimidin-5-ylboronic acid (56.4 mg, 0.455 mmol), Pd(PPh_3)_2Cl_2 (10.65 mg, 0.015 mmol), Na_2CO_3 (80 mg, 0.758 mmol), water (160 µL) and EtOH (80 µL) and DME (600 µL) were added, and the vial was resealed and the RM stirred at
80°C for 16 h. The RM was diluted with 3 mL of THF and stirred with Si-Thiol (59.7 mg, 0.076 mmol) for a 2 h and the combined filtrates were evaporated to dryness under reduced pressure. The residue was purified by flash chromatography (RediSep® Silica gel column, 4 g, DCM / MeOH + 1% NH₄OH from 1% to 10% MeOH + 1% NH₄OH) and preparative HPLC (Condition 8, 30% for 0.2 min then 30% to 60% in 12 min) to afford the title compound as a white solid. UPLC-MS (Condition 1) \( t_r = 2.47 \text{ min} \), \( m/z = 391.0 \ [M+H]^+ \), \( m/z = 389.0 \ [M-H]^− \); \(^1\text{H}-\text{NMR} \) (400 MHz, DMSO-d₆) \( \delta \) ppm 4.02 (s, 3 H) 7.40 (d, \( J=8.3 \) Hz, 2 H) 7.88 (d, \( J=9.3 \) Hz, 2 H) 8.48 (d, \( J=2.4 \) Hz, 1 H) 8.86 (d, \( J=2.4 \) Hz, 1 H) 9.13 (s, 2 H) 9.23 (s, 1 H) 10.47 (s, 1 H).

**Example 50**

6-(2-((2-Hydroxyethyl)aminoo)ethoxy)-5-((pyrimidin-5-yl)n-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00316] 5-bromo-6-chloro-N-(4-((trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 60 mg, 0.152 mmol), diethanolamine (19.14 mg, 0.182 mmol), DIPEA (53.0 \( \mu L \), 0.303 mmol) and iPrOH (150 \( \mu L \)) were added to a vial, which was sealed and subjected to MW irradiation at 110°C for 60 min, and then at 150°C for 10 min. Diethanolamine (15.95 mg, 0.152 mmol) was then added and the RM was subjected to MW irradiation at 160°C for 1 h. Pyrimidin-5-ylboronic acid (56.4 mg, 0.455 mmol), Pd(PPh₃)₂Cl₂ (10.65 mg, 0.015 mmol) Na₂C₀₃ (80 mg, 0.758 mmol) water (200 \( \mu L \)) and DME (600 \( \mu L \)) were then added and the vial was resealed and stirred at 80°C for 2.5 h. The RM was diluted with 1.5 mL of THF, stirred with Si-Thiol (Silicycle, 59.7 mg, 0.076 mmol) for 1 h, filtrated and the filtrate was evaporated to dryness under reduced pressure to give a residue which was purified by preparative HPLC (Condition 8, 20% for 0.2 min then 20% to 50% in 12 min) to yield the title compound as a white solid. UPLC-MS (Condition 1) \( t_r = 1.59 \) min, \( m/z = 464.0 \ [M+H]^+ \), \( m/z =462.1 \ [M-H]^− \); \(^1\text{H}-\text{NMR} \) (400 MHz, DMSO-d₆) \( \delta \) ppm 2.83 (t, \( J=5.4 \) Hz, 2 H) 3.18 (t, 2 H) 3.53 (t, \( J=5.4 \) Hz, 2 H) 4.61 (t, \( J=5.4 \) Hz, 2 H) 4.90 (br. s, 1 H) 7.40.
(d, J=8.6 Hz, 2 H) 7.88 (d, J=4.6 Hz, 2 H) 8.52 (d, J=2.4 Hz, 1 H) 8.84 (d, J=2.4 Hz, 1 H) 9.20 (s, 2 H) 9.23 (s, 1 H) 10.49 (s, 1 H).

**Example 51**

6-(2-Methoxyethoxy)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

![Chemical Structure](image)

**[00317]** A mixture of 5-bromo-6-(2-methoxyethoxy)-N-(4-(trifluoromethoxy)phenyl)nicotinamide **(Stage 51.1, 50 mg, 0.15 mmol) Pd(Ph₃P)₄ (13 mg, 0.01 mmol) and 5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)pyrimidine (36 mg, 0.172 mmol) and toluene (0.5 mL) was stirred for 15 min. at RT. K₂P₀₅ (73 mg, 0.345 mmol) was added and the RM was stirred at 110°C for 6 h. The RM was diluted with MeOH, filtered through a cartridge of PL-Thiol MP-Resin, and the filtrate was evaporated to dryness under reduced pressure. The residue was purified by preparative SFC (Column DEAP, from 7% to 12% in 6 min) to afford the title compound was lyophilized to afford an off-white powder. UPLC-MS (Condition 2) tᵣ = 1.04 min, m/z = 435.1 [M+H]+.

**[00318]** **Stage 51.1** 5-Bromo-6-(2-methoxyethoxy)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

![Chemical Structure](image)

**[00319]** A mixture of 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide **(Stage 44.2, 250 mg, 0.632 mmol) and K₂CO₃ (131 mg, 0.948 mmol) in 2-methoxyethanol (997 µL, 12.64 mmol) was stirred at 110°C for 4 h. The solvent was evaporated off under reduced pressure to afford the title compound which was used directly. UPLC-MS (Condition 2) tᵣ = 1.18 min, m/z = 435.2/437.2 [M+H]+; ¹H-NMR (600 MHz, DMSO-d₆) δ ppm 3.32 (s, 3 H) 3.64 - 3.76
Example 52

6-(2-hydroxyethoxy)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00320] A mixture of 5-bromo-6-(2-hydroxyethoxy)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 52.1, 50 mg, 0.19 mmol), Pd(Ph₃P)₄ (14 mg, 0.012 mmol) and 5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)pyrimidine (37 mg, 0.178 mmol) in toluene (0.5 mL) was stirred for 15 min. at RT. K₃PO₄ (76 mg, 0.356 mmol) was added and the RM was stirred at 110°C for 6 h. The RM was diluted with MeOH, filtered through a cartridge of PL-Thiol MP-Resin, and the filtrate was evaporated to dryness under reduced pressure. The residue was purified by preparative SFC (Column DEAP, from 12% to 17% in 6 min.) to afford the title compound as an off-white powder. UPLC-MS (Condition 2) t½ = 0.93 min, m/z = 419.1 [M+H]⁺; ¹H-NMR (600 MHz, DMSO-d₆) δ ppm 3.74 (q, J=4.83 Hz, 2 H) 4.48 (t, J=4.71 Hz, 2 H) 4.90 (t, J=5.27 Hz, 1 H) 7.39 (d, J=8.66 Hz, 2 H) 7.87 (d, J=8.85 Hz, 2 H) 8.50 (d, J=1.51 Hz, 1 H) 8.81 (s, 1 H) 9.19 (s, 2 H) 9.21 (s, 1 H) 10.46 (s, 1 H).

[00321] Stage 52.1 5-Bromo-6-(2-hydroxyethoxy)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00322] A mixture of 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 400 mg, 1.01 mmol), ethane-1,2-diol (1 mL, 17.88 mmol), K₂CO₃ (210 mg, 1.517 mmol) and DMF (2 mL) was stirred at 50°C overnight. The solvent was evaporated off under reduced pressure and the residue was treated with water and extracted with DCM. The combined
extracts were dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to afford the title compound which was used directly. UPLC-MS (Condition 2) tᵣ = 1.04 min, m/z = 421.3/423.3 [M+H]⁺.

**Example 53**

5-(Pyrimidin-5-yl6-((tetrahydro-2H-pyran-4-yl)oxy)-N-(4-
(trifluoromethoxy)phenyl)nicotinamide

![Molecule Structure]

[00323] Tetrahydro-2H-pyran-4-ol (0.361 mL, 3.79 mmol) and K₂CO₃ (314 mg, 2.275 mmol) were added to a suspension of 5-bromo-6-chloro-N-(4-
(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 300 mg, 0.758 mmol) in DMF (2 mL) and the PvM was stirred at 120°C for 3.5 h. The solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (RediSep® Silica gel column, 40 g, EtOAc / n-hexane, isocratic 2:8) to afford 5-bromo-6-(tetrahydro-2H-pyran-4-yl)oxy)-N-(4-
(trifluoromethoxy)phenyl)nicotinamide, of which (25 mg, 0.054 mmol) together with pyrimidin-5-ylboronic acid (30 mg, 0.160 mmol), Pd(Ph₃P)₄ (10 mg, 8.13 µmol) K₃PO₄ (35 mg, 0.163 mmol) and toluene (0.4 mL) was stirred at 110°C for 10 h under an argon atmosphere. The cooled RM was diluted with MeOH, filtered through a cartridge of PL-Thiol MP-Resin, and the filtrate was evaporated to dryness under reduced pressure. The residue was purified by preparative SFC (Column 4-EP; gradient 7% to 12% in 6 min.) and lyophilized to afford an off-white powder. UPLC-MS (Condition 2) tᵣ = 1.06 min, m/z = 461.1 [M+H]⁺; ¹H-NMR (600 MHz, DMSO-de) δ ppm 1.61 - 1.75 (m, 2 H) 2.04 (m, J=10.00 Hz, 2 H) 3.54 (m, J=8.80, 8.80 Hz, 2 H) 3.70 - 3.80 (m, 2 H) 5.37 - 5.47 (m, 1H) 7.39 (d, J=8.47 Hz, 2 H) 7.87 (d, J=9.03 Hz, 2 H) 8.50 (s, 1 H) 8.82 (s, 1 H) 9.15 (s, 2 H) 9.22 (s, 1 H) 10.45 (s, 1 H).
**Example 54**

6-(2-Methoxyethoxy)-5-(1H-pyrazol-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00324] A mixture of 5-bromo-6-(2-methoxyethoxy)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 51.1, 50 mg, 0.115 mmol), 1-(tetrahydro-2H-pyran-2-yl)-5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)-1H-pyrazole (49 mg, 0.172 mmol), Pd(PPh₃)₄ (13 mg, 0.011 mmol) and toluene (0.5 mL) was stirred for 15 min under an argon atmosphere. K₃PO₄ (73 mg, 0.345 mmol) was added and the RM was stirred at 110°C for 6 h. The RM was diluted with MeOH, filtered through a cartridge of PL-Thiol MP-Resin, and the filtrate was evaporated to dryness under reduced pressure to afford 6-(2-methoxyethoxy)-5-(1-(tetrahydro-2H-pyran-2-yl)-1H-pyrazol-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide, of which (50 mg, 0.099 mmol), TFA (0.25 mL, 3.24 mmol) and DCM (0.4 mL) was stirred at RT for 2 h. The mixture was treated with a solution of Na₂CO₃ (2 M) and extracted with EtOAc. The combined extracts were dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by preparative SFC (Column Diol; gradient 13% to 18% in 6 min.) and lyophilized to afford an off-white powder. UPLC-MS (Condition 2) tᵣ = 1.04 min, m/z = 423.3 [M+H]⁺; ¹H-NMR (600 MHz, DMSO-d₆) δ ppm 3.34 (s, 3 H) 3.73 - 3.82 (m, 2 H) 4.58 (br. s, 2 H) 6.90 (d, J=1.88 Hz, 1 H) 7.37 (d, J=8.47 Hz, 2 H) 7.83 - 7.87 (m, 1 H) 7.89 (d, J=9.03 Hz, 2 H) 8.70 (d, J=2.26 Hz, 1 H) 8.77 - 8.90 (m, 1 H) 10.55 (br. s, 1 H) 13.06 - 13.22 (m, 1 H).

**Example 55**

6-(2-Hydroxyethoxy)-5-(1H-pyrazol-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide
[00325] A mixture of 5-bromo-6-(2-methoxyethoxy)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 52.1, 100 mg, 0.237 mmol), 1-(tetrahydro-2H-pyran-2-yl)-5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)-1H-pyrazole (66 mg, 0.237 mmol), Pd(Ph3P)4 (27 mg, 0.024 mmol), K3PO4 (151 mg, 0.712 mmol) and toluene (1.5 mL) was stirred at 110°C for 5 h under an argon atmosphere. The RM was diluted with MeOH, filtered through a cartridge of PL-Thiol MP-Resin, and the filtrate was evaporated to dryness under reduced pressure to afford 6-(2-hydroxyethoxy)-5-(1-(tetrahydro-2H-pyran-2-yl)-1H-pyrazol-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide, which was dissolved in DCM (0.4 mL), treated with TFA (0.25 mL, 3.24 mmol) and stirred overnight at RT. The mixture was treated with a solution of Na2CO3 (2 M) and extracted with EtOAc. The combined extracts were dried over Na2SO4 and the solvent was evaporated off under reduced pressure to give the crude product was purified by preparative SFC (Column DEAP; gradient 25% to 30% in 6 min.) and lyophilized to afford the title compound as a white powder. UPLC-MS (Condition 2) tR = 0.92 min, m/z = 409.1 [M+H]+; 1H-NMR (600 MHz, DMSO-d6) δ ppm 3.82 (t, J=4.90 Hz, 2 H) 4.48 (t, J=4.89 Hz, 2 H) 6.98 (d, J=1.69 Hz, 1 H) 7.37 (d, J=8.66 Hz, 2 H) 7.75 - 7.83 (m, 1H) 7.88 (s, 2 H) 8.70 (d, J=2.26 Hz, 2 H) 8.79 (br. s, 1 H) 10.54 (s, 1 H) 12.86 - 13.40 (m, 1 H).

**Example 56**

6-Chloro-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

![Chemical Structure](image)

[00326] A mixture of 6-chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 56.1, 5.7 g, 12.75 mmol), pyrimidine-5-boronic acid (2.5 g, 19.77 mmol), PdCl2(dppf)-(CH2Cl2) (0.625 g, 0.765 mmol), Na2CO3 (19.13 mL, 38.3 mmol) and DME (100 mL) was stirred at 80°C for 2.5 h under argon atmosphere. The RM was filtered through Hyflo®, diluted with EtOAc (100 mL), washed with a sat. aq. solution of NaHCO3 and with brine, dried over Na2SO4 and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Biotage Silica gel column, 120 g, Eluent: n-hexane / EtOAc from 20%
to 60% EtOAc) to give the title compound product as a pink crystalline solid. UPLC-MS (Condition 2) \( t_R = 1.01 \text{ min} \), 393.2 [M-H] \( ^{-} \); 1H-NMR (400 MHz, DMSO-d\( _6 \)) \( \delta \) ppm 7.42 (d, \( J=8.99 \) Hz, 2H), 7.88 (d, \( J=9.38 \) Hz, 2H), 8.56 (d, \( J=2.35 \) Hz, 1H), 9.03 (d, \( J=2.35 \) Hz, 1H), 9.10 (s, 2H), 9.32 (s, 1H), 10.69 (s, 1H).

Stage 56.1 6-Chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00328] DMF (0.014 mL, 0.176 mmol) and oxalyl chloride (2.316 mL, 26.5 mmol) were added to a solution of 6-chloro-5-iodonicotinic acid (5 g, 17.64 mmol) in DCM (80 mL) and the RM was stirred for 2 h at RT under a nitrogen atmosphere. The solvent was evaporated off under reduced pressure and the residue was dissolved in THF (60 mL). DIPEA (9.24 mL, 52.9 mmol) was added and the mixture was cooled down to 5°C, treated dropwise with a solution of 4-(trifluoromethoxy)aniline (2.62 mL, 19.40 mmol) in DCM (20 mL) and stirred min at 5°C for 30 and at RT for 1 h. The solvent was off under reduced pressure and the residue was treated with aq. 10 % citric acid (70 mL) and extracted with EtOAc. The combined extracts were washed with sat. aq. Na\(_2\)CO\(_3\) and brine, dried over Na\(_2\)SO\(_4\) and the solvent was evaporated off under reduced pressure to give the crude product was suspended in n-hexane, and filtered to afford the title compound as a beige solid. UPLC-MS (Condition 2) \( t_R = 1.22 \text{ min} \), 440.9/442.9 [M-H] \( ^{-} \).

Example 57

5-(Pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)-6-(trifluoromethyl)nicotinamide

[00329] 5-Bromo-N-(4-(trifluoromethoxy)phenyl)-6-(trifluoromethyl)nicotinamide (Stage 57.1, 125.7 mg, 0.293 mmol), pyrimidin-5-ylboronic acid (43.6 mg, 0.352 mmol), Cs\(_2\)CO\(_3\) (191 mg, 0.586 mmol), PdCl\(_2\)(dppf)-(CH\(_2\)Cl\(_2\)) (23.92 mg, 0.029 mmol), water (2 mL) and dioxane (8
niL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was
stirred at 70°C for 2.5 h. The solvent was evaporated off under reduced pressure to give a residue
which was treated with water and extracted with EtOAc. The combined extracts were washed
with water and brine, dried over Na₂SO₄ and the solvent was evaporated off under reduced
pressure to give the crude product which was purified by flash chromatography (Silica gel
column, 25 g, n- hexane / EtOAc) and recrystallized from n-hexane / EtOAc to give the title
compound as a pink powder. UPLC-MS (Condition 2) t_R = 1.07 min, m/z = 429 [M+H]^+.

Example 5

6-Ethoxy-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

![Chemical Structure]

[00330] Stage 57.1 5-Bromo-N-(4-(trifluoromethoxy)phenyl)-6-(trifluoromethyl)nicotinamide

[00331] TMSI (0.821 mL, 5.00 mmol) and NaI (2.248 g, 15.00 mmol) were added to a
solution of 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2, 1.978 g,
5 mmol) in MeCN (40 mL) and the RM was stirred for 2.2 h at RT under an argon atmosphere.
The solvent was evaporated off under reduced pressure and the residue was dissolved in EtOAc,
washed with aq. 2 M NaOH, water, aq. 5% Na₂S₂O₃, water and brine, and dried over Na₂SO₄. The
solvent was evaporated off under reduced pressure to give a residue, of which (487 mg (0.5
mmol), together with Cul (19.05 mg, 0.100 mmol), methyl 2,2-difluoro-2-(fluorosulfanyl)acetate
(0.159 mL, 1.25 mmol) and DMF (2.5 mL) were added to a vial, which was sealed, evacuated /
purged with argon and stirred at 90°C for 2 h. The cooled RM was added to a sat. aq. solution of
NaHCO₃ and the stirred overnight. The product was filtered, washed with water, then dissolved
in EtOAc, washed with water and brine, dried over MgSO₄ and the solvent was evaporated off
under reduced pressure to give the crude product was purified by flash chromatography (Silica gel
column, 100 g, n- hexane / EtOAc 4:1) to afford the title compound as a beige powder. UPLC-MS
(Condition 2) t_R = 1.25 min, m/z = 426.9 / 428.9 [M-H]^-

Example 58

6-Ethoxy-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide
The title compound was prepared in an analogous fashion to that described in Example 49 using 5-bromo-6-chloro-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 44.2) and ethanol to afford the title compound as a white powder. UPLC-MS (Condition 2) \( t_R = 1.1 \) min, \( m/z = 405.3 \) [M+H]+; \(^1\)H-NMR (400 MHz, DMSO-\( d_6 \)) \( \delta \) ppm 1.35 (t, \( J = 7.04 \) Hz, 3 H) 4.49 (q, \( J = 7.04 \) Hz, 2 H) 7.39 (d, \( J = 8.60 \) Hz, 2 H) 7.88 (m, \( J = 9.00 \) Hz, 2 H) 8.48 (d, \( J = 2.35 \) Hz, 1 H) 8.84 (d, \( J = 2.35 \) Hz, 1 H) 9.14 (s, 2 H) 9.22 (s, 1 H) 10.45 (s, 1 H).

Example 59

2-Fluoro-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)benzamide

The title compound was prepared in an analogous fashion to that described in Example 57 using 5-bromo-2-fluoro-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 59.1) and pyrimidin-5-ylboronic acid to afford the title compound as a white powder. UPLC-MS (Condition 2) \( t_R = 1.04 \) min, \( m/z = 378.1 \) [M+H]+; \(^1\)H-NMR (400 MHz, DMSO-\( d_6 \)) \( \delta \) ppm 7.39 (d, \( J = 8.99 \) Hz, 2 H) 7.56 (t, \( J = 9.19 \) Hz, 1 H) 7.85 (d, \( J = 8.99 \) Hz, 2 H) 8.01 - 8.09 (m, 1 H) 8.15 (dd, \( J = 6.65 \), 2.35 Hz, 1 H) 9.22 (s, 3 H) 10.72 (s, 1 H).

Stage 59.1 5-Bromo-2-fluoro-N-(4-(trifluoromethoxy)phenyl)benzamide

Carbonyldiimidazole (1.054 g, 6.50 mmol) was added to a solution of 5-bromo-2-fluorobenzoic acid (1.129 g, 5.0 mmol) in DMF (10 mL) and the RM was stirred for 2 h at 0°C. 4-(trifluoromethoxy)aniline (1.129 g, 5.0 mmol) was added and the RM was allowed to warm up RT
and stirred for 2 days. The solvent was evaporated off under reduced pressure and the residue was treated with aq. NaHCO₃, stirred and filtered. The filtered material was washed with water, dissolved in EtOAc, washed with water and brine, dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 100 g, n-hexane / EtOAc 2:1) to afford the title compound as a white crystalline solid. UPLC-MS (Condition 2) tᵣ = 1.27 min, m/z = 378.0 / 380.0 [M+H]+.

**Example 60**

2-Fluoro-3-(pyrimidin-5-yl)N-(4-(trifluoromethoxy)phenyl)benzamide

![Chemical structure of 2-Fluoro-3-(pyrimidin-5-yl)N-(4-(trifluoromethoxy)phenyl)benzamide](image)

The title compound was prepared in an analogous fashion to that described in **Example 57** using 3-bromo-2-fluoro-N-(4-(trifluoromethoxy)phenyl)benzamide (Stage 60.1) and pyrimidin-5-ylboronic acid to afford the title compound as a white powder. UPLC-MS (Condition 2) tᵣ = 1.04 min, m/z = 378.2 [M+H]+; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 7.39 (d, J=8.99 Hz, 2 H) 7.51 (t, J=7.62 Hz, 1 H) 7.74 - 7.91 (m, 4 H) 9.09 (s, 2 H) 9.27 (d, J=1.17 Hz, 1 H) 10.72 (s, 1 H).

**Stage 60.1** 3-Bromo-2-fluoro-N-(4-(trifluoromethoxy)phenyl)benzamide

![Chemical structure of 3-Bromo-2-fluoro-N-(4-(trifluoromethoxy)phenyl)benzamide](image)

A solution of oxalyl chloride (0.657 mL, 7.50 mmol) in DCM (10 mL) and of DMF (0.01 mL) were added to a suspension of 3-bromo-2-fluorobenzoic acid (1.095 g, 5 mmol) in DCM (10 mL) and the RM was stirred for at RT for 2 h. The solvent was evaporated off under reduced pressure. The residue was dissolved in DCE (10 mL), treated dropwise with a solution of 4-(trifluoromethoxy)aniline (0.744 mL, 5.50 mmol) and DIPEA (1.747 mL, 10.00 mmol) and the RM was stirred for at RT for 1 h. The RM was treated with an aq. NaHCO₃ and extracted with
DCM. The combined extracts were washed with water, dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 100 g, n-hexane / EtOAc 2:1) to afford the title compound as beige crystals. UPLC-MS (Condition 2) $t_R = 1.22$ min, $m/z = 375.9/378.0$ [M-H-]

**Example 61**

5-(2-Aminopyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

![Structure of 5-(2-Aminopyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide]

[00339] 5-Bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 61.1, 181 mg, 0.5 mmol), 5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)pyrimidin-2-amine (133 mg, 0.6 mmol), PdCl$_2$(dppf)-(CH$_2$Cl)$_2$ (20.42 mg, 0.025 mmol), K$_2$CO$_3$ (138 mg, 1 mmol), water (2 mL) and dioxane (10 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 90°C for 24 h. The solvent was evaporated off under reduced pressure and the residue was treated with water and extracted with EtOAc. The combined extracts were dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure to give the product which was recrystallized from hot EtOAc to afford the title compound as a beige powder. UPLC-MS (Condition 2) $t_R = 0.89$ min, $m/z = 376.2$ [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-d$_6$) $\delta$ ppm 6.98 (s, 2 H) 7.41 (d, $J=8.99$ Hz, 2 H) 7.90 (d, $J=8.99$ Hz, 2 H) 8.50 - 8.55 (m, 1 H) 8.76 (s, 2 H) 9.00 (d, $J=1.95$ Hz, 1 H) 9.06 (d, $J=1.96$ Hz, 1 H) 10.62 (s, 1 H).

[00340] Stage 61.1 5-Bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide

![Structure of 5-Bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide]

[00341] The title compound was prepared in an analogous fashion to that described in Stage 59.1 using 5-bromonicotinic acid and 4-(trifluoromethoxy)aniline to afford white crystals. UPLC-MS (Condition 2) $t_R = 1.1$ 1 min, 361.1/363 [M+H]$^+$. 

102
Example 62

2'-Methoxy-N-(4-(trifluoromethoxy)phenyl)-3,3'-bipyridine-5-carboxamide

5-Bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide  (Stage 61.1, 90 mg, 0.25 mmol), 2-methoxypyridin-3-ylboronic acid (45.9 mg, 0.300 mmol), K$_2$CO$_3$ (69.1 mg, 0.500 mmol), PdCl$_2$(dpdp)-(CH$_2$Cl)$_2$ (20.42 mg, 0.025 mmol), water (0.6 mL) and dioxane (3 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 60°C for 1 h. The RM was treated with water and extracted with EtOAc. The combined extracts were washed with water and brine, dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 15 g, EtOAc) to afford the title compound as a white powder. UPLC-MS (Condition 2) $t_R$ = 1.1 min, m/z = 390.2 [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-$d_6$) $\delta$ ppm 3.93 (s, 3 H) 7.19 (dd, $J$=7.23, 4.89 Hz, 1 H) 7.40 (d, $J$=8.99 Hz, 2 H) 7.89 (m, $J$=9.00 Hz, 2 H) 7.97 (dd, $J$=7.43, 1.96 Hz, 1 H) 8.28 (dd, $J$=5.08, 1.96 Hz, 1 H) 8.46 (t, $J$=2.15 Hz, 1 H) 8.97 (d, $J$=1.95 Hz, 1 H) 9.08 (d, $J$=2.35 Hz, 1 H) 10.64 (s, 1 H).

Example 63

2'-Hydroxy-N-(4-(trifluoromethoxy)phenyl)-3,3'-bipyridine-5-carboxamide

TMSI (100 µL, 0.734 mmol) was added to a solution of 2'-methoxy-N-(4-(trifluoromethoxy)phenyl)-3,3'-bipyridine-5-carboxamide  (Example 62, 79 mg, 0.203 mmol) in CHCl$_3$ (4 mL) and the RM was stirred at 60°C overnight. The RM was cooled to RT, poured into MeOH and the solvent was evaporated off under reduced pressure. The residue was treated with aq. 5% NH$_3$ and extracted with EtOAc. The combined extracts were washed with brine, dried over
Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure to give the product which was recrystallized from hot EtOAc to afford the title compound as beige crystals. UPLC-MS (Condition 2) $t_R$ 0.87 min, m/z = 376.1 [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-$_d_6$) δ ppm 6.38 (t, J=6.65 Hz, 1 H) 7.40 (d, J=8.99 Hz, 2 H) 7.51 (d, J=6.26 Hz, 1 H) 7.86 - 7.96 (m, 3 H) 8.61 - 8.66 (m, 1 H) 9.00 - 9.04 (m, 1 H) 9.09 - 9.13 (m, 1 H) 10.63 (s, 1 H) 12.03 (br. s, 1 H).

**Example 64**

5-(l-(2-Hydroxyethyl)-1H-pyrazol-4-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00344] 5-Bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 61.1, 181 mg, 0.5 mmol), 1-(2-(tetrahydro-2H-pyran-2-yl)-1H-pyrazole (193 mg, 0.600 mmol), PdCl$_2$(dpf)-(CH$_2$Cl)$_2$ (20.42 mg, 0.025 mmol), K$_2$CO$_3$ (138 mg, 1 mmol), water (2 mL) and dioxane (10 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 95°C 7 h. The RM was treated with water and extracted with EtOAc. The combined extracts were dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure to give a residue which was purified by flash chromatography (Silica gel column, 25 g, EtOAc). The purified intermediate was treated with 5 M HCl in MeOH (5 mL) and stirred at RT for 1 h. The solvent was evaporated off under reduced pressure and the residue was treated with aq. NaHCO$_3$ and extracted with EtOAc. The combined extracts were washed with water and brine, dried over Na$_2$SO$_4$, and the solvent was evaporated off under reduced pressure to give the product which was recrystallized from Et$_2$O / EtOAc to afford the title compound as a beige powder. UPLC-MS (Condition 2) $t_R$ 0.92 min, m/z = 393.2 [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-$_d_6$) δ ppm 3.78 (q, J=5.47 Hz, 2 H) 4.19 (t, J=5.47 Hz, 2 H) 4.96 (t, J=5.08 Hz, 1 H) 7.40 (d, J=8.60 Hz, 2 H) 7.90 (d, J=8.99 Hz, 2 H) 8.09 (s, 1 H) 8.38 (s, 1 H) 8.43 (d, J=1.17 Hz, 1 H) 8.88 (s, 1 H) 9.03 (s, 1 H) 10.63 (s, 1 H).
Example 65

6-Chloro-5-nH-imidazol-2-ylVN-(4-(trifluoromethoxy)phenyl)nicotinamide

[00345] A solution of isopropyl magnesium chloride 2 M in THF (2.5 mL, 5 mmol) was added dropwise to a solution of 6-chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 65.1, 885 mg, 2 mmol) in THF (15 mL) at a temperature between -70 and -85°C under an argon atmosphere. The RM was then stirred at between -45 and -40°C for 30 min, then cooled to -75°C and treated dropwise with DMF (0.465 mL, 6.00 mmol). The RM allowed to slowly warm to RT, then treated with NH₄Cl aq. solution (15 mL) and extracted with EtOAc. The combined extracts were washed with a sat. NH₄Cl solution, with water and brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure. The residue was dissolved in MeOH (10 mL), treated with glyoxal 40% in water (0.178 mL, 3.89 mmol) and 25% aq. NH₃ (1.462 mL, 19.44 mmol) and the RM was stirred for at RT for 24 h. The solvent was evaporated off under reduced pressure and the residue was treated with water and extracted with EtOAc. The combined extracts were washed with water and brine, dried over Na₂SO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by column chromatography (Silica gel, 50 g, n-hexane / EtOAc 2:1 and 1:1) and recrystallized from n-hexane / EtOAc to afford the title product as white crystals. UPLC-MS (Condition 2) t_R 0.88 min, m/z = 383.1 [M+H]+; ¹H-NMR (600 MHz, DMSO-d₆) δ ppm 7.19 (s, 1 H) 7.41 (d, J=7.72 Hz, 3 H) 7.89 (d, J=8.85 Hz, 2 H) 8.76 (d, J=2.07 Hz, 1 H) 8.94 (d, J=2.07 Hz, 1 H) 10.77 (s, 1 H) 12.60 (br. s, 1 H).

[00346] Stage 65.1 6-Chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00347] DMF (1.927 mL, 24.89 mmol) and SOCl₂ (18.17 mL, 249 mmol) were added to a suspension of 6-chloro-5-iodo-3-pyridinecarboxylic acid (24 g, 83 mmol) in toluene (165
mL) and the RM was stirred at 80°C for 1 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in THF (165 mL). DIPEA (29.0 mL, 166 mmol) was added and the mixture was cooled down to -15°C, treated dropwise with a solution of 4-(trifluoromethoxy)aniline (15.43 g, 87 mmol) in THF (165 mL) and was stirred at RT for 1 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in THF (165 mL). DIPEA (29.0 mL, 166 mmol) was added and the mixture was cooled down to -15°C, treated dropwise with a solution of 4-(trifluoromethoxy)aniline (15.43 g, 87 mmol) in THF (165 mL) and was stirred at RT for 1 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in TBME (500 mL), washed with 1N HCl, a sat. aq. solution of NaHCO$_3$ and brine, dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure and the product was recrystallized from EtOAc / n-heptane to afford the title compound as a white solid. UPLC-MS (Condition 2) $t_R = 1.23$ min, m/z = 440.8 [M-H].

**Example 66**

6-(2-Hydroxypropan-2-yl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

[00348] 6-Chloro-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide

(Example 56, 100 mg, 0.253 mmol), tributyl(l-ethoxyvinyl)stannane (0.103 mL, 0.304 mmol), Pd(Ph$_3$P)$_4$ (29.3 mg, 0.025 mmol) and dioxane (1 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 110°C for 2 h. The solvent was evaporated off under reduced pressure to afford the crude 6-(1-ethoxyvinyl)-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (100 mg, 0.232 mmol) was treated with 4 M HCl in dioxane (2 mL, 8.00 mmol), stirred at RT for 2 h and then treated with excess aq. Na$_2$CO$_3$ and the solvent was evaporated off under reduced pressure to give a residue which was purified by flash chromatography (RediSep® Silica gel column, 24 g, EtOAc / n-hexane from 50% to 70% EtOAc). The 6-acetyl-5-(pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide (25 mg, 0.062 mmol) was dissolved in DCM (3 mL), cooled to -60 °C and treated dropwise with a solution of MeMgBr 1.4 M in THF/toluene (1:3) (0.089 mL, 0.124 mmol) at The RM was stirred for 1.5 h at -60 °C, then treated with a sat. aq. NH$_4$Cl solution and extracted with DCM. The
combined extracts were dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give the crude product which was purified by preparative SFC (Column NH₂; gradient 12% to 17% in 6 min.) and lyophilized in water/MeCN to afford the title compound. UPLC-MS (Condition 2) tᵣ 0.79-0.94 min, m/z = 419.1 [M+H]⁺; ¹H-NMR (600 MHz, DMSO-d₆) δ ppm 1.49 (s, 6 H) 5.02 (br. s, 1 H) 7.39 (d, J=8.40 Hz, 2 H) 7.87 (d, J=9.10 Hz, 2 H) 8.11 (d, J=2.19 Hz, 1 H) 8.77 (s, 2 H) 9.09 (d, J=2.20 Hz, 1 H) 9.13 (s, 1 H) 10.55 (s, 1 H).

Example 67

N-(4-(Chlorodifluoromethoxy)phenyl)-5-(pyrimidin-5-yl)-((tetrahydro-2H-pyran-4-yl)oxy)nicotinamide

Example 68

Methyl 2-(pyrimidin-5-yl)-4-((4-(trifluoromethoxy)phenyl)carbamoyl)benzoate
SOCl₂ (1.218 mL, 16.68 mmol) and DMF (208.24 µL) were added dropwise to a suspension of 3-iodo-4-(methoxycarbonyl)benzoic acid (1.0212 g, 3.34 mmol) in toluene (8.37 mL) and the RM was stirred at 80°C for 1 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in THF (6.27 mL). DIPEA (1.166 mL, 6.67 mmol) was added and the mixture was cooled down to 0°C, treated dropwise with a solution of 4-(trifluoromethoxy)aniline (0.496 mL, 3.67 mmol) in THF was added and the RM was stirred at RT for 2.5 h. The RM was treated with 1 M HCl and extracted with EtOAc. The combined extracts were washed with HCl 1 M, NaHCO₃ 10%, brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to give a residue, of which (500 mg, 1.075 mmol), together with pyrimidin-5-ylboronic acid (266 mg, 2.150 mmol), Pd(PPh₃)₄Cl₂ (75 mg, 0.107 mmol), Na₂CO₃ (342 mg, 3.22 mmol), water (1.30 mL), EtOH (656 µL) and DME (4.58 mL), were added to a vial, which was sealed, evacuated / purged with argon and subjected to MW irradiation for 10 min at 120 °C. RM was diluted with DME (3 mL) and stirred overnight with Si-Thiol (1.3 mmol/g, 413 mg, 0.537 mmol). The mixture was centrifuged, filtered and the filtrate was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel, cyclohexane / EtOAc, 2% to 50% EtOAc) to afford the title compound as a yellow solid. UPLC-MS (Condition 2) tᵣ = 1.08 min, m/z = 418.2 [M+H]+; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm 3.72 (s, 3 H) 7.40 (d, J=8.21 Hz, 2 H) 7.88 (m, J=9.00 Hz, 2 H) 8.08 (s, 1 H) 8.16 (s, 2 H) 8.88 (s, 2 H) 9.24 (s, 1 H) 10.62 (s, 1 H).

**Example 69**

2-(2-Methoxypyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)isonicotinamide
2-Bromo-N-(4-(trifluoromethoxy)phenyl)isonicotinamide (Stage 69.1, 70 mg, 0.194 mmol), 2-methoxypyrimidine boronic acid (45 mg, 0.291 mmol), Pd(PPh₃)₂Cl₂ (5.44 mg, 7.75 μmol), Na₂CO₃ (71.9 mg, 0.678 mmol), water (194 μL), EtOH (129 μL) and DME (969 μL) were added to a vial, which was sealed, evacuated / purged with argon and subjected to MW irradiation at 125°C for 20 min. The RM was stirred with Si-Thiol (53.8 mg, 0.078 mmol) for 30 min. The resin was filtered off and the solvent was evaporated off under reduced pressure to give a residue which was purified by flash chromatography (Biotage Silica gel column, 4 g, DCM / MeOH + 1% NH₄OH from 1.5% to 20% MeOH + 1% NH₄OH) to yield the title compound as an off-white solid. UPLC-MS (Condition 1) tᵣ = 2.58 min, m/z = 391[M+H]⁺; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm: 4.01 (s, 3 H) 7.42 (d, J=8.56 Hz, 2 H) 7.84 (dd, J=5.01, 1.35 Hz, 1 H) 7.90 (m, J=9.30 Hz, 2 H) 8.46 (s, 1 H) 8.89 (d, J=5.14 Hz, 1 H) 9.34 (s, 2 H) 10.71 (s, 1 H).

Stage 69.1 2-Bromo-N-(4-(trifluoromethoxy)phenyl)isonicotinamide

Carbonyldiimidazole (2.367 g, 14.60 mmol) was added to a stirred solution of 2-bromoisonicotinic acid (2.4572 g, 12.16 mmol) in MeCN (30 mL) and the RM was stirred at RT for 3 h. 4-(trifluoromethoxy)aniline (2.467 mL, 18.25 mmol) was added and RM was stirred at RT overnight, and the mixture was treated with sat. aq. Na₂CO₃ (50 mL) and extracted with TBME. The combined extracts were washed with aq. HCl (pH = 3), brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure to a residue which was triturated with n-heptane and filtered to yield the title compound as a white solid. UPLC-MS (Condition 1) tᵣ = 1.55 min, m/z= 360.9 - 362.9 [M+H]⁺, m/z= 358.9 - 360.9 [M-H]⁻; ¹H-NMR (400 MHz, DMSO-d₆) δ ppm: 7.40 (d, J=8.56 Hz, 2 H) 7.77 - 7.97 (m, 3 H) 8.12 (s, 1 H) 8.61 (d, J=5.14 Hz, 1 H) 10.72 (s, 1 H).

Example 70

2-(Pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)isonicotinamide
The title compound was prepared in an analogous fashion to that described in Example 69 using 2-bromo-N-(4-(trifluoromethoxy)phenyl)isonicotinamide and 5-pyrimidine boronic acid to afford a grey solid. UPLC-MS (Condition 1) $t_R$ 2.31 min, $m/z = 361.0$ [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-$d_6$) δ ppm 7.43 (d, $J=8.56$ Hz, 2 H), 7.92 (d, $J=9.29$ Hz, 3 H), 8.58 (s, 1 H), 8.96 (d, $J=5.14$ Hz, 1 H), 9.31 (s, 1 H), 9.53 (s, 2 H), 10.74 (s, 1 H).

Example 71

6-(pyrimidin-5-yl-N-(4-(trifluoromethoxy)phenyl)pyrazine-2-carboxamide

SOCl$_2$ (0.71 mL, 2.84 mmol) and DMF (0.025 mL) were added dropwise to a suspension of 6-chloro-pyrazine-2-carboxylique acid (0.450 g, 2.84 mmol) in toluene (1 mL) and the RM was stirred at 80-90°C for 2 h. The solvent was evaporated off under reduced pressure and the residue was dissolved in THF (10 mL) and acetone (20 mL), cooled to 0° under argon atmosphere, pyridine (0.689 mL, 8.52 mmol), a solution of 4-(trifluoromethoxy)aniline (0.593 mL, 4.42 mmol) in acetone (5 mL) and DMF (1 mL) were added and the RM was stirred at RT overnight. The mixture was treated with aq. 1M HC1 (40 mL) and extracted with EtOAc/TBME (1:4). The combined extracts were washed with aq. 1M HC1, water, brine and dried over MgSO$_4$ and the solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 25 g, cyclohexane / EtOAc from 5% to 30% EtOAc) and afforded 6-chloro-N-(4-(trifluoromethoxy)phenyl)pyrazine-2-carboxamide as a yellow oil of which (50 mg, 0.157 mmol), pyrimidin-5-ylboronic acid (39.0 mg, 0.315 mmol), Pd(PPh$_3$)$_2$Cl$_2$ (6.63 mg, 0.0094 mmol), Na$_2$CO$_3$ (66.7 mg, 0.630 mmol), DME (668 µL), water (191 µL) and EtOH (95 µL) was stirred at 80-85°C for 1 h. The RM was diluted with THF (2 mL), stirred overnight with Si-Thiol (Silicycle, 124 mg, 0.157 mmol), filtered and the filtrate was evaporated.
off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 4 g, DCM / EtOAc + 0.1% NH₄OH from 20% to 80% EtOAc+ 0.1% NH₄OH). Crystallization from MeOH afforded the title product as white needles. UPLC-MS (Condition 1) 

\[ t_R = 2.68 \text{ min}, \frac{m/z = 362.0}{M+H}^+, \frac{m/z = 360.0}{M-H}^-; ^1H-NMR \text{ (400 MHz, DMSO-d}_6) \text{ d ppm 7.45 (d, } J=8.6 \text{ Hz, 2 H) 8.01 (d, } J=9.0 \text{ Hz, 2 H) 9.35 (s, 1 H) 9.38 (s, 1 H) 9.69 (s, 1 H) 9.88 (s, 2 H) 10.85 (s, 1 H).} \]

**Example 72**

\[ 4-(\text{pyrimidin-5-yl})\text{VN-(4-(trifluoromethoxy)phenyl})\text{picolinamide} \]

\[ \text{SOCl}_2 (2.93 \text{ ml, 40.2 mmol}) \text{ and DMF (0.01 mL) were added dropwise to 4-iodopicolinic acid (1 g, 4.02 mmol) in toluene (10 ml) and the RM was stirred at 80 °C for 4 h. The solvent was evaporated off under reduced pressure and the residue was dissolve in THF (8 mL), cooled to 0° under argon atmosphere, DIPEA (2.104 mL, 12.05 mmol) and 4-(trifluoromethoxy)aniline (0.593 mL, 4.42 mmol) were added and the RM was stirred at RT overnight. The mixture was treated with aq. sat. NH₄Cl (50 mL) and extracted with EtOAc/TBME(1:1). The combined extracts were washed with water (50 mL), aq. Na₂SO₄ (50 mL), an aq. sat. Na₂CO₃, brine, dried over MgSO₄ and the solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 40 g, cyclohexane / EtOAc-0.1%NH₄OH from 5% to 30% EtOAc-0.1%NH₄OH) to give a mixture of the chloro and the iodo intermediate, of which (100 mg) together with pyrimidin-5-ylboronic acid (87.3 mg, 0.705 mmol), Pd(PPh₃)₃Cl₂ (23.74 mg, 0.034 mmol), Na₂CO₃ (90 mg, 0.846 mmol), water (342 μL) and EtOH (171 μL) and DME (1196 μL) was stirred at 100°C for 16 h and 1 h at 150°C. The RM was diluted with THF (3 mL), stirred for 2 h with Si-Thiol (Silicycle, 111 mg, 0.141 mmol), filtered and the filtrate was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 12 g, cyclohexane / EtOAc + 0.1% NH₄OH from 25% to 100% EtOAc + 0.1% NH₄OH) and preparative HPLC.} \]

**Example 73**

6-(Pyrimidin-5-yl)-N-(4-(trifluoromethoxy)phenyl)picolinamide

![Chemical Structure](image)

[00357] The title compound was prepared in an analogous fashion to that described in
**Example 57** using 6-bromo-N-(4-(trifluoromethoxy)phenyl)picolinamide (Stage 73.1) and 5-
pyrimidine boronic acid to afford the title compound as a white powder. UPLC-MS (Condition 2)
t_R = 1.08 min, m/z = 361.1 [M+H]^+; 1H-NMR (400 MHz, DMSO-d_6) δ ppm 7.43 (d, J=9.38 Hz, 2
H) 8.02 (m, J=9.00 Hz, 2 H) 8.20 - 8.28 (m, 2 H) 8.42 - 8.47 (m, 1 H) 9.33 (s, 1 H) 9.81 (s, 2 H)
10.76 (s, 1 H).

[00358] **Stage 73.1** 6-Bromo-N-(4-(trifluoromethoxy)phenyl)picolinamide

![Chemical Structure](image)

[00359] The title compound was prepared in an analogous fashion to that described in
**Stage 59.1** using 6-bromopicolinic acid and 4-(trifluoromethoxy)aniline to afford the title
compound as a white powder. UPLC-MS (Condition 2) t_R = 1.27 min, m/z = 361.0/363.0 [M+H]^+.

**Example 74**

N-(4-(Trifluoromethoxy)phenyl)-[3,3’-bipyridinel-5-carboxamide
A mixture of 5-bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 42.1, 5 g, 13.85 mmol), 3-pyridylboronic acid (1.872 g, 15.23 mmol), PdCl$_2$(dppf) (0.507 g, 0.692 mmol), K$_3$PO$_4$ (8.82 g, 41.5 mmol), EtOH (9.33 mL), water (14 mL) and toluene (70 mL) was stirred at 100°C for 2 h. The solvent was evaporated off under reduced pressure and the residue was treated with water and extracted with EtOAc. The combined extracts were washed with water and brine, dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 500 g, EtOAc / MeOH from 0 to 2% MeOH). Fractions containing the pure product were combined and the solvent was evaporated off under reduced pressure to give a residue which was dissolved in THF, stirred overnight with Si-Thiol (1 g), filtered and the filtrate was evaporated off under reduced pressure to give the title compound as a white solid. UPLC-MS (Condition 7) $t_R$ 0.95 min, m/z = 358 [M-H]$^-$; $^1$H-NMR (400 MHz, DMSO-$d_6$) $\delta$ ppm 7.41 (d, $J$=8.56 Hz, 2 H) 7.59 (dd, $J$=7.95, 4.77 Hz, 1 H) 7.91 (m, $J$=9.00 Hz, 2 H) 8.29 (dt, $J$=7.83, 1.96 Hz, 1 H) 8.65 (t, $J$=2.20 Hz, 1 H) 8.68 (dd, $J$=4.77, 1.59 Hz, 1 H) 9.08 (d, $J$=1.96 Hz, 1 H) 9.13 (d, $J$=1.96 Hz, 1 H) 9.16 (d, $J$=2.20 Hz, 1 H) 10.69 (s, 1 H).

Example 75

5'-Fluoro-N-(4-(trifluoromethoxy)phenyl)-[3,3'-bipyridinel-5-carboxamide

A mixture of 5-bromo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 42.1, 5 g, 13.85 mmol), 3-fluoro-5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)pyridine (3.5 g, 15.23 mmol), PdCl$_2$(dppf) (0.507 g, 0.692 mmol), K$_3$PO$_4$ (8.82 g, 41.5 mmol), EtOH (9.33 mL), water (14 mL) and toluene (70 mL) was stirred at 100°C for 1 h. The solvent was evaporated off under
reduced pressure and the residue was treated with water and extracted with EtOAc. The combined extracts were washed with water and brine, dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 500 g, EtOAc / MeOH from 0 to 2% MeOH). Fractions containing the pure product were combined and the solvent was evaporated off under reduced pressure to give a residue which was dissolved in THF, stirred overnight with Si-Thiol (1 g), filtered and the filtrate was evaporated off under reduced pressure to give the title compound as a white solid.

UPLC-MS (Condition 7) $t_R = 1.03$ min, m/z = 376 [M-H]$^-$; $^1$H-NMR (400 MHz, DMSO-d$_6$) $\delta$ ppm 7.43 (d, J=8.93 Hz, 2 H) 7.91 (d, J=9.0 Hz, 2 H) 8.32 (dd, J=2.20 Hz, 1 H) 8.71 (d, J=2.32 Hz, 1 H) 9.0 (d, J=5.1 Hz, 1 H) 9.15 (s, 1 H) 9.22 (s, 1 H) 10.69 (s, 1 H).

Example 76

6-Chloro-N-(4-(chlorodifluoromethoxy)phenyl)-5-(pyrimidin-5-yl)nicotinamide

[00362] 6-Chloro-N-(4-(chlorodifluoromethoxy)phenyl)-5-iodonicotinamide (Stage 76.1, 8 g. 17.43 mmol), pyrimidine-5-boronic acid (4.55 g, 34.9 mmol), PdCl$_2$(dpff) (0.638 g, 0.871 mmol), Na$_2$CO$_3$ (26.1 mL of 2 M, 52.3 mmol), and DME (110 mL) were added to a vial, which was sealed, evacuated / purged with argon and the RM was stirred at 90°C for 20 h. The RM was dissolved in EtOAc (200 mL), washed with water, dried over Na$_2$SO$_4$ and the solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 750 g, EtOAc / n-hexane 1:1) and recrystallized from EtOAc / iPr$_2$O to give the title product as a pink solid. UPLC-MS (Condition 2) $t_R = 1.05$ min, m/z = 409.0/411.0 [M-H]$^-$; $^1$H-NMR (400 MHz, DMSO-d$_6$) $\delta$ ppm 7.38 (d, J=8.60 Hz, 2 H) 7.86 (d, J=8.99 Hz, 2 H) 8.54 (d, J=1.95 Hz, 1 H) 9.01 (br.s., 1 H) 9.08 (s, 2 H) 9.30 (s, 1 H) 10.67 (s, 1 H).

[00363] Stage 76.1 6-Chloro-N-(4-(chlorodifluoromethoxy)phenyl)-5-iodonicotinamide
The title compound was prepared in an analogous fashion to that described in Stage 65.1 using 6-Chloro-5-iodo-3-pyridinecarboxylic acid and 4-(chlorodifluoromethoxy)aniline to afford a beige solid. UPLC-MS (Condition 2) $t_R = 1.25$ min, $m/z = 459.0/460.7/462.1$ [M+H]$^+$.  

**Example 77**  
2-Chloro-5-fluoro-N-(4-(trifluoromethoxy)phenyl)-3,3'-bipyridine-5-carboxamide  

[00365] The title compound was prepared in an analogous fashion to that described in Example 56 using 6-chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide and 3-fluoropyridine-5-boronic acid pinacol ester to afford the title product as a beige solid. UPLC-MS (Condition 2) $t_R = 1.13$ min, $m/z = 412$ [M+H]$^+$; $^1$H-NMR (400 MHz, DMSO-$_d_6$) $\delta$ ppm 7.39 (d, J=8.99 Hz, 2 H) 7.85 (d, J=8.99 Hz, 2 H) 8.02 - 8.12 (m, 1 H) 8.49 (d, J=2.35 Hz, 1 H) 8.64 - 8.76 (m, 2 H) 8.99 (dd, J=2.35, 0.78 Hz, 1 H) 10.65 (s, 1 H).  

**Example 78**  
2-Chloro-N-(4-(chlorodifluoromethoxy)phenyl)-5-fluoro-3,3'-bipyridine-5-carboxamide  

[00366] The title compound was prepared in an analogous fashion to that described in Example 76 using 6-chloro-N-(4-(chlorodifluoromethoxy)phenyl)-5-iodonicotinamide (Stage 76.1) and 3-Fluoropyridine-5-boronic acid pinacolester (80°C instead of 90°C) to afford the title...
compound as a white solid. UPLC-MS (Condition 2) \( t_R = 1.17 \text{ min}, m/z = 425.9/427.9 \ [\text{M-H}]^-; \)

\[^1H\text{-NMR} (400 \text{ MHz, DMSO-d}_6) \delta \text{ ppm} 7.42 (d, J=8.68 \text{ Hz, 2 H}) 7.60 (dd, J=7.89, 4.83 \text{ Hz, 1 H})
7.88 (d, J=9.05 \text{ Hz, 2 H}) 8.07 (dt, J=7.82, 1.90 \text{ Hz, 1 H}) 8.49 (d, J=2.32 \text{ Hz, 1 H}) 8.71 (dd, J=4.83,
1.41 \text{ Hz, 1 H}) 8.81 (d, J=2.08 \text{ Hz, 1 H}) 9.00 (d, J=2.20 \text{ Hz, 1 H}) 10.68 (s, 1 H).

Example 79

2-Chloro-N-(4-(trifluoromethoxy)-phenyl)-3,3'-bipyridine-5-carboxamide

[00367] A mixture of 6-chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 56.1, 15 g, 33.9 mmol) (15 g, 33.9 mmol), pyridin-3-ylboronic acid (4.73 g, 37.3 mmol), PdCl\(_2\)(dpdpf) (1.240 g, 1.695 mmol), K\(_3\)PO\(_4\) (21.58 g, 102 mmol), water (4 mL) and toluene (160 mL) was stirred at 100°C overnight. The solvent was evaporated off under reduced pressure and the residue was treated with water and extracted with EtOAc. The combined extracts were washed with water and brine, dried over Na\(_2\)SO\(_4\) and the solvent was evaporated off under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 500 g, EtOAc / MeOH from 0 to 2% MeOH). Fractions containing the pure product were combined and the solvent was evaporated off under reduced pressure to give a residue which was dissolved in MeOH (50 mL), stirred overnight with Si-Thiol (1 g), filtered and the filtrate was evaporated off under reduced pressure to give the title compound as a beige solid. UPLC-MS (Condition 7) \( t_R = 1.1 \text{ min}, m/z = 392 [\text{M-H}]^-; \)

\[^1H\text{-NMR} (400 \text{ MHz, DMSO-d}_6) \delta \text{ ppm} 7.42 (d, J=8.68 \text{ Hz, 2 H}) 7.60 (dd, J=7.89,
4.83 \text{ Hz, 1 H}) 7.88 (d, J=9.05 \text{ Hz, 2 H}) 8.07 (dt, J=7.82, 1.90 \text{ Hz, 1 H}) 8.49 (d, J=2.32
Hz, 1 H) 8.71 (dd, J=4.83, 1.41 Hz, 1 H) 8.81 (d, J=2.08 Hz, 1 H) 9.00 (d, J=2.20 Hz, 1 H) 10.68 (s, 1 H).

Example 80

6-Chloro-5-(1H-pyrazol-5-yl)-N-(4-(trifluoromethoxy)phenyl)nicotinamide
A mixture of 6-chloro-5-iodo-N-(4-(trifluoromethoxy)phenyl)nicotinamide (Stage 56.1, 4.0 g, 8.95 mmol), 1-(tetrahydro-2H-pyran-2-yl)-5-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)-1H-pyrazole (3.73 g, 13.42 mmol), Pd(PPh\(_3\))\(_4\) (0.517 g, 0.447 mmol), K\(_3\)PO\(_4\) (5.70 g, 26.8 mmol) and toluene (45 mL) was stirred at 80°C for 5 h under an argon atmosphere. The RM was filtered through Hyflo\textregistered;, washed with EtOAc (100 mL) and the combined filtrates were evaporated to dryness under reduced pressure. The residue was purified by flash chromatography (Silica gel column, 80 g, n-hexane/EtOAc from 9:1 to 1:1) to give the protected intermediate, of which 1.5 g (3.02 mmol) was dissolved in DCM (20 mL), treated with TFA (2.32 mL, 30.2 mmol) and stirred for at RT for 76 h. The solvent was evaporated off under reduced pressure and the residue was treated with sat. aq. Na\(_2\)CO\(_3\) (80 mL) and extracted with EtOAc. The combined extracts were washed with brine (50 mL), dried over Na\(_2\)SO\(_4\) and the solvent was evaporated off under reduced pressure to give the crude product which was purified by flash chromatography (Silica gel column, 40 g, n-hexane/EtOAc from 9:1 to 1:1) to give the title compound as beige crystals. UPLC-MS (Condition 2) t\(_R\) = 1.02 min, m/z = 382.9 [M+H]\(^+\); \(^1\)H-NMR (400 MHz, DMSO-d\(_6\)) \(\delta\) ppm 6.91 (s, 1 H) 7.38 (d, J=8.99 Hz, 2 H) 7.80 - 8.00 (m, 3 H) 8.73 (d, J=2.35 Hz, 1 H) 8.88 (d, J=2.74 Hz, 1 H) 10.73 (s, 1 H) 13.29 - 13.42 (m, 1 H).

**Assays**

The utility of the compounds of the invention described herein can be evidenced by testing in the following assays. Compounds of the invention were assessed for their ability to inhibit ABL1 activity in biochemical assays and BCR-ABL1 in cellular assays described below.

**Biochemical Assays**

**Expression and purification of protein kinase** - Expression and purification of human ABL was performed using standard expression purification procedures. The ABL64-515
protein was generated and used for in vitro kinase assays. The protein was generated by a co-expression vector carrying the DNA fragments for ABL1 (la isoform, with an N-terminal His6-tag followed by a PreScission protease cleavage site) and the human protein tyrosine phosphatase-1B (residues 1-283, untagged), using the dual expression vector pCDF Duet-1 (Novagen). The His-ABL was expressed in E.coli BL21 (DE3) and the ABL proteins were isolated by Ni-affinity on aNi-NTA column (Qiagen). The His-tag was removed by PreScission protease (GE Healthcare) and the non-phosphorylated ABL further purified on a Mono Q HR 10/10 (GE Healthcare, mono-phosphorylated ABL is about 10-20 % of total ABL protein) and HiLoad 16/60 Superdex 200 size exclusion column (GE Healthcare). Non-phosphorylated ABL64-515 proteins were analyzed by mass spectroscopic analysis and flash-frozen in aliquots and stored at -80°C. SRC (amino acids 83-535 or Src83-535) was expressed and purified as described (S.W. Cowan-Jacob, G. Fendrich, P.W. Manley, W. Jahnke, D. Fabbro, J. Liebetanz, T. Meyer, c-Src crystal structure provides insights into c-Src activation. Structure 13 (2005) 861-871).

Radio ABL1 (64-515) assay
[00371] For determination of ABL kinase activity, the radiometric filter-binding assay was used. The assay was performed by mixing 10 μL of the compound pre-diluted with 10 μL of ATP (20 μM ATP with 0.1 μCi [γ-33P]-ATP) with the phospho-acceptor peptide poly[Ala6Glu2LysHBr5Tyr1] = polyAEKY) in 20 mM Tris/HC1 pH 7.5, 1 mM DTT, 10 mM MgCl₂, 0.01 mM Na₃VO₄, 50 mM NaCl. 10 μL of enzyme (ranging between 5 nM to 20 nM) was added to initiate the reaction. Pre-incubation of enzyme with compounds (when stated) was performed by exposing the enzyme to compounds prior to addition of the substrate mixture (ATP and/or peptide substrate). After 15 min at room temperature, the reaction was stopped by the addition of 50 μL 125 mM EDTA, and the peptide-bound 33P separated on filter-plates (PVDF or MAIP; Millipore, Volketswil, Switzerland) prepared according to the manufacturer’s instructions. Filter-plates were washed 3x with 0.5% H₃PO₄, followed by addition of 30 μL scintillation cocktail (Microscint, Perkin Elmer) per well and then analysed in a TopCount NXT scintillation counter (Perkin Elmer). Results were expressed as IC₅₀ values. The Kₘ values for
ATP were determined by assaying the ABL kinase with increasing concentrations of ATP and keeping the exogenous acceptor protein substrate (poly-AEKY) at a constant concentration (at about 2-fold its \( K_m \)) and *vice versa*. \( K_m \) and \( V_{max} \) were calculated according to Eadie-Hofstee as described (D. Fabbro, G. Fendrich, V. Guez, T. Meyer, P. Furet, J. Mestan, J.D. Griffin, P.W. Manley, S.W. Cowan-Jacob. Targeted therapy with imatinib: An exception or a rule? Handbook of Experimental Pharmacology 167, Inhibitors of Protein Kinases and Protein Phosphates (2005) 361-389). The data were plotted as \( V \) *versus* \( V/S \), where \( V \) is the velocity of the reaction at a given substrate (S) concentration, and fitted to a straight line using linear regression analysis, where the slope of the line corresponds to \(-K_m\) and the Y-intercept represents the \( V_{max} \).

**Caliper ABL1 (64-515) assay**

[00372] All assays were performed in 384-well microtiter plates. Each assay plate contained 8-point serial dilutions for 40 test compounds, as well as four 8-point serial dilutions of staurosporine as a reference compound, plus 16 high and 16 low controls. Liquid handling and incubation steps were done on a Thermo CatX workstation equipped with Innovadyne Nanodrop Express. Between pipetting steps, tips were cleaned in wash cycles using wash buffer.

[00373] The assay plates were prepared by addition of 50 nL per well of compound solution in 90% DMSO. The kinase reactions were started by stepwise addition of 4.5 \( \mu \)L per well of peptide/ATP-solution (50 mM HEPES, pH 7.5, 1 mM DTT, 0.02% BSA, 0.6% DMSO, 10 mM beta-glycerophosphate, and 10 \( \mu \)M sodium orthovanadate, 20 mM MgCl\(_2\), 2 mM MnCl\(_2\), 4 \( \mu \)M ATP, 4 \( \mu \)M peptide (FITC-Ahx-EAIYAAPFKK-NH\(_2\))) and 4.5 \( \mu \)L per well of enzyme solution (50 mM HEPES, pH 7.5, 1 mM DTT, 0.02% BSA, 0.6% DMSO, 10 mM beta-glycerophosphate, and 10 \( \mu \)M sodium orthovanadate, 20 mM MgCl\(_2\), 2mM MnCl\(_2\), 3.5 nM ABL (ABL(64-515), produced in-house from E. coli)). Kinase reactions were incubated at 30°C for 60 minutes and subsequently terminated by addition of 16 \( \mu \)L per well of stop solution (100 mM HEPES pH 7.5, 5% DMSO, 0.1% Caliper coating reagent, 10 mM EDTA, and 0.015% Brij35). Plates with terminated kinase reactions were transferred to the Caliper LC3000 workstations for reading. Phosphorylated and unphosphorylated peptides were separated using the Caliper
microfluidic mobility shift technology. Briefly, samples from terminated kinase reactions were applied to the chip. Analytes are transported through the chip by constant buffer flow and the migration of the substrate peptide is monitored by the fluorescence signal of its label. Phosphorylated peptide (product) and unphosphorylated peptide (substrate) are separated in an electric field by their charge/mass ratio. Kinase activities were calculated from the amounts of formed phospho-peptide. IC50 values were determined from percent inhibition values at different compound concentrations by non-linear regression analysis.

[00374] **Preparation of compound dilutions:** Test compounds were dissolved in DMSO (10 mM) and transferred into 1.4mL flat bottom or V-shaped Matrix tubes carrying a unique 2D matrix. The stock solutions were stored at +2°C if not used immediately. For the test procedure the vials were defrosted and identified by a scanner whereby a working sheet was generated that guided the subsequent working steps.

[00375] Compound dilutions were made in 96-well plates. This format enabled the assay of maximally 40 individual test compounds at 8 concentrations (single points) including 4 reference compounds. The dilution protocol included the production of "pre-dilution plates", "master plates" and "assay plates".

[00376] **Pre-dilution plates:** Polypropylene 96-well plates were used as pre-dilution plates. A total of 4 pre-dilution plates were prepared including 10 test compounds each on the plate positions A1-A10, one standard compound at A11 and one DMSO control at A12. All dilution steps were done on a HamiltonSTAR robot.

[00377] **Master plates:** 30 µL of individual compound dilutions including standard compound and controls of the 4 "pre-dilution plates" were transferred into a 384 "master plate" including the following concentrations 1'810, 362, 72.5, 54.6, 14.5, 2.9, 0.58 and 0.12µM, respectively in 90% of DMSO.

[00378] **Assay plates:** Identical "assay plates" were then prepared by pipetting 50nL each of compound dilutions of the "master plates" into 384-well "assay plates" by means of a HummingBird 384-channel dispenser. These plates were used directly for the assay which was
performed in a total volume of 9.05 µL. This led to a final compound concentration of 10, 2.0, 0.4, 0.08, 0.016, 0.0032, 0.00064 and 0.000128 µM and a final DMSO concentration of 0.5 % in the assay.

**Cellular Assays**

[00379] To assess the ability of compounds of the invention to inhibit BCR-ABL1 activity in cellular assays, compounds were evaluated for their ability to selectively inhibit the proliferation of cells dependent on BCR-ABL1 expression relative to cells that do not depend on BCR-ABL1 expression.

[00380] The murine bone marrow-derived cell line Ba/F3 was used to generate the appropriate cell line models. Ba/F3 cells were obtained from the German Collection of Microorganisms and Cell Cultures (DSMZ, Braunschweig and DSMZ No. ACC 300). Parental Ba/F3 cells depend on IL3 for growth and survival and were used as the reference cell line that does not depend on BCR-ABL1 activity for growth and survival. These cells are referred to as Ba/F3-WT.

[00381] To generate Ba/F3 cells that depend on BCR-ABL1 expression for growth and survival, Ba/F3 cells were engineered to express BCR-ABL1 using retroviral transduction with a MSCV based retroviral vector containing a p210 BCR-ABL1 expression cassette. When grown in the absence of IL-3, the proliferation of the cells is dependent on the expression of BCR-ABL1. (Daley, G.Q. and Baltimore, D. Transformation of an interleukin 3-dependent hematopoietic cell line by the chronic myeloid leukemia-specific p210 BCR-ABL1 protein. PNAS 1988;85:9312-9316). These cells are referred to as Ba/F3-BCR-ABL1-WT. A similar approach was used to generate Ba/F3 cells that depend on a BCR-ABL1 variant in which threonine 315 is replaced with isoleucine. These cells are referred to as Ba/F3-BCR-ABL1-T315I.

[00382] Ba/F3-WT cells were maintained in RPMI1640 media with L-glutamine, HEPES (Lonza), 10% FBS (Gibco) and 5ng/ml IL-3 (Calbiochem). Ba/F3-BCR-ABL1-WT cells and Ba/F3-BCR-ABL1-T315I cells were manitained in RPMI1640 media with L-glutamine, HEPES (Lonza) and 10% FBS (Gibco).
**Proliferation assay**

[00383] For each cell line, the cell density was adjusted to 50,000 cells/mL and 50 µL (2500 cells) added per well of a 384-well assay plate.

[00384] Test compounds were resuspended in DMSO at a concentration of 10 mM. A serial three-fold dilution of each compound with DMSO was performed in 384-well plates using the Janus Liquid Dispenser (PerkinElmer). Compound was delivered to the assay plates containing 2500 cells in a 50 µL volume via Acoustic delivery from an ATS-100 (EDC). For Ba/F3-BCPv-ABL1-WT cell assays, 2 nL of each compound dilution was transferred to the assay plate for final assay concentrations of 0.4 µM, 0.13 µM, 0.044 µM, 0.015 µM, 0.005 µM, 0.001 µM, 0.00033 µM, 0.00011 µM, 0.000037 µM, 0.000012 µM. For Ba/F3-WT and Ba/F3-BCR-ABL1-T315I cell assays, 50 nL of each compound dilution was transferred to the assay plate for final assay concentrations of 10 µM, 3.33 µM, 11 µM, 0.37 µM, 0.12 µM, 0.041 µM, 0.014 µM, 0.0046 µM, 0.0015 µM, 0.00051 µM.

[00385] Cells were incubated at 37°C in a humidified environment with 5% carbon dioxide for 48 hours. Britelite plus solution (Perkin Elmer) was prepared according to the manufacturer’s instructions and 25 µL added to each well of the assay plate. Plates were incubated for 3-5 minutes and the luminescence detected on an EnVision Multimode plate reader (Perkin Elmer). The degree of luminescence correlates with the number of cells in each well. The effect of each inhibitor concentration can therefore be calculated and IC50 values generated.

**Determining Compound Concentration in Mouse Brain**

[00386] **Brain homogenation:** Approximately two parts volume of MeOH/water (2/8 v/v) were added to the preweighted brain samples (~250 mg) and subsequently homogenized using Covaris™ instrument. A 50 µL aliquot was subjected to protein precipitation and analysis as described below.

[00387] **Sample processing:** Fifty µL aliquots of blood or brain homogenate from animals treated with c-ABL inhibitors were first spiked with 5 µL of the internal standard (N-(4-methyl-3-((4-(6-methylpyridin-3-yl)pyrimidin-2-yl)amino)phenyl)-4-((4-methylpiperazin-1-yl)methyl)benzamide for positive ion mode 5-chloro-N-(4-(cyclohexylcarbamoyl)sulfamoyl)-
phenethyl)-2-methoxybenzamide for negative ion mode, respectively), subsequently deproteinated by adding MeCN (200 µL), centrifuged, the supernatant evaporated to dryness, and re-dissolved in 100 µL of a MeOH/water (1/1 v/v). Five µL were subjected to HPLC-MS/MS analysis. Chromatographic separation from interfering endogenous and exogenous contaminants was achieved on an Phenomenex™ Polar RP reversed-phase HPLC column (particle size: 2.5 µη; column dimensions: 2 x 50 mm) using a linear gradient of 100 % water containing 1 % formic acid (A), and MeOH supplemented with 1 % formic acid (B), which was run over 6.0 min from 5 % to 90 % B, then kept at 100% B for 1.0 min, and a subsequent 1.5 min postrun with re-equilibration of the column. The column was kept at 50°C. The flow of 350 µL/min from the HPLC system (Flux Rheos Allegro LC pump and CTC Pal autosampler) was directly introduced into the ion source of an Finnigan™ Quantum Ultra MS-detector (triple stage quadrupole mass analyzer) and subjected to heated electrospray ionization (HESI).

c-ABL inhibitors were specifically detected using multiple reaction monitoring from their quasi-molecular parent ion ([M+H]+ or [M-H]-) to specific daughter ions as given in the table below. Quantification of blood and brain levels of c-ABL inhibitors compounds were based on a 6-level calibration curve made in triplicate.

CE: Collision energy. RT: Retention time.
The compounds of the invention show IC50 values in the range of 1 nM to 750 nM for inhibition of Abl kinase activity in a radiometric filter binding (Radio). For a microfluidic mobility shift assays (Caliper) assay, IC50 values can be found in the range of 1 nM to 1 µM. For the Ba/F3-BCR-ABL1-WT cellular proliferation assay, GI50 values can be found in the range of 1 nM to 2 µM. Some compounds show submicromolar activity on the Ba/F3-BCR-ABL1-T315I proliferation assay (100-900 nM). Further, some compounds of the invention have a higher concentration in the brain [pmol-g⁻¹] than in the plasma [pmol-mL⁻¹] following a single dose of 1 mg/kg in mice. Examples of results on drug concentrations measured in samples taken 5 minutes after an intravenous 1 mg/kg dose are detailed in the table below. For some compounds, the concentrations can be found in the range of 4000 pmol-g⁻¹ to 8500 pmol-g⁻¹ in the brain, and in the range of 1000 pmol-mL⁻¹ to 5000 pmol-mL⁻¹ in the plasma, with a ratio of brain concentration to plasma concentration of 1 to 5. Under the same experimental conditions, such a ratio of compounds from the present invention is up to 100 fold higher than the ratio of brain concentration to plasma concentration of Gleevec®.

SD: Standard deviation.

[00389] It is understood that the examples and embodiments described herein are for illustrative purposes only and that various modifications or changes in light thereof will be
suggested to persons skilled in the art and are to be included within the spirit and purview of this application and scope of the appended claims.
We Claim:

1. A compound of formula (I):

\[
\text{R}_1 \text{Y}_1 \text{Y}_2 \text{Y}_3 \text{Y}_4 \text{N} \text{R}_5 \text{Y}_5 \text{Y}_6 \text{Y}_7 \text{Y}_8
\]

in which:

- \( \text{Y} \) at each occurrence is independently selected from \( \text{N} \) and \( \text{CH} \);
- \( \text{Y}_i \) is selected from \( \text{N} \) and \( \text{CR}_5 \); wherein \( \text{R}_5 \) is selected from hydrogen, methoxy and imidazolyl; wherein said imidazolyl is unsubstituted or substituted with methyl;
- \( \text{R}_i \) is a 5 to 9 member heteroaryl ring incorporating one to four nitrogen, oxygen or sulfur atoms, wherein not more than one of the atoms is selected from an oxygen or sulfur; wherein said heteroaryl of \( \text{R}_i \) is unsubstituted or substituted with 1 to 3 \( \text{R}_6 \) groups;
- \( \text{R}_2 \) is selected from hydrogen, halo, hydroxy, \( \text{Ci}_4\text{alkyl}, \text{Ci}_4\text{alkoxy}, \text{methoxy-carbonyl}, 3,6\text{-dihydro-2H-pyran-4-yl}, \text{tetrahydro-2H-pyran-4-yl}, \text{tetrahydro-2H-pyran-4-yl-oxo} \) and cyclobutyl; wherein said \( \text{Ci}_4\text{alkyl}, \text{Ci}_4\text{alkoxy}, \text{cyclobutyl} \) or \( \text{tetrahydro-2H-pyran-4-yl} \) of \( \text{R}_2 \) can be unsubstituted or substituted with 1 to 3 groups independently selected from halo, hydroxy, cyano, \( \text{Ci}_4\text{alkoxy}, \text{morpholino}, \text{piperazinyl} \) and \( \text{NR}_5\text{R}_6\); wherein \( \text{R}_5 \) is selected from hydrogen and \( \text{Ci}_4\text{alkyl} \); and \( \text{R}_6 \) is selected from hydroxy-ethyl; wherein said piperazinyl substituent of \( \text{R}_2 \) can be unsubstituted or further substituted with \( \text{Ci}_4\text{alkyl} \);
- \( \text{R}_3 \) is selected from hydrogen and halo;
- \( \text{R}_4 \) is selected from \( \text{SF}_5 \) and \( \text{Y}_2\text{-CF}_2\text{-Y}_3 \);
- \( \text{R}_6 \) at each occurrence is independently selected from hydrogen, hydroxy, \( \text{Ci}_4\text{alkyl}, \text{Ci}_4\text{alkoxy}, \text{cyano}, \text{trifluoromethyl}, \text{halo}, \text{amino}, \text{methyl-carbonyl}, \text{methoxy-carbonyl}, \text{cyclopropyl} \) and \( \text{pyrrolidinyl-methyl} \); wherein said \( \text{Ci}_4\text{alkyl} \) or \( \text{Ci}_4\text{alkoxy} \) of \( \text{R}_6 \) is unsubstituted or substituted with 1 to 3 groups independently selected from halo and hydroxy;
- \( \text{Y}_2 \) is selected from \( \text{CF}_2 \), \( \text{O} \) and \( \text{S(0)O-2} \); and
$Y_3$ is selected from hydrogen, halo, methyl, difluoromethyl and trifluoromethyl;

$Y_4$ is selected from N and CR2;

$Y_5$ and $Y_6$ are independently selected from N, CR5 or CF; wherein $R_5$ is selected from hydrogen and halo; with the proviso that when $Y_4$ is N, $Y_5$. $Y_6$ and $Y_1$ are each CR5; or the pharmaceutically acceptable salts thereof; with the proviso that the compounds of formula I do not include 3-(2-aminoquinazolin-6-yl)-4-methyl-N-(4-(trifluoromethoxy)phenyl)-benzamide and 3-(2-aminoquinazolin-6-yl)-5-bromo-N-(4-(trifluoromethoxy)phenyl)-benzamide.

2. The compound of claim 1 of formula (la):

![Chemical Structure](image)

in which:

$Y$ at each occurrence is independently selected from N and CH;

$Y_i$ is selected from N and CR5; wherein $R_5$ is selected from hydrogen, methoxy and imidazolyl; wherein said imidazolyl is unsubstituted or substituted with methyl;

$R_i$ is a selected from pyrimidinyl, pyridinyl, pyrazinyl, thienyl, pyrrolidinyl, imidazolyl, thiazolyl, pyrazolyl and benzo[d][1,3]dioxol-5-yl; wherein said pyrimidinyl, pyridinyl, pyrazinyl, thienyl and pyrazolyl of $R_i$ is unsubstituted or substituted with a group selected from cyano, methyl, halo, hydroxy, hydroxy-ethyl, methyl-carbonyl, methoxy, hydroxy-ethoxy, amino, methoxy-carbonyl and pyrrolidinyl-methyl;

$R_2$ is selected from hydrogen, halo, hydroxy, $C_{i-q}$alkyl, $C_{i-q}$alkoxy, methoxy-carbonyl, 3,6-dihydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl-oxy and cyclobutyl; wherein said $C_{i-q}$alkyl, $C_{i-q}$alkoxy, cyclobutyl or tetrahydro-2H-pyran-4-yl of $R_2$ can be unsubstituted or substituted with 1 to 3 groups independently selected from halo, hydroxy, cyano, $C_{i-q}$alkoxy, morpholino, piperazinyl and $NR_5R_6$; wherein $R_5$ is selected from hydrogen and $C_{i-$}
alkyl; and \( R_b \) is selected from hydroxy-ethyl; wherein said piperazinyl substituent of \( R_2 \) can be unsubstituted or further substituted with \( \text{Ci}_4 \text{alkyl} \);

\( r_4 \) is selected from -SF \( 5 \) and -Y2-CF2-Y \( 3 \);

\( R_6 \) at each occurrence is independently selected from hydrogen, hydroxy, \( \text{Ci}_4 \text{alkyl}, \text{Ci}_4 \text{alkoxy}, \text{cyano}, \text{trifluoromethyl}, \text{halo}, \text{amino}, \text{methyl-carbonyl}, \text{methoxy-carbonyl}, \text{cyclopropyl} \) and pyrrolidinyl-methyl; wherein said \( \text{Ci}_4 \text{alkyl} \) or \( \text{Ci}_4 \text{alkoxy} \) of \( R_6 \) is unsubstituted or substituted with 1 to 3 groups independently selected from halo and hydroxy;

\( Y_2 \) is selected from CF\( 2 \), O and S(0)\( o-2 \); and

\( Y_3 \) is selected from hydrogen, halo, methyl, difluoromethyl and trifluoromethyl;

\( Y_4 \) is selected from N and CR\( 2 \);

\( Y_5 \) and \( Y_6 \) are independently selected from N, CR\( 5 \) or CF; wherein \( R_5 \) is selected from hydrogen and halo; with the proviso that when \( Y_4 \) is N, \( Y_5, Y_6 \) and \( Y_1 \) are each CR\( 5 \); or the pharmaceutically acceptable salts thereof.

3. The compound of claim 2 in which: \( Y \) is CH; and \( R_2 \) is selected from hydrogen, halo and methyl.

4. The compound of claim 3 in which \( R_3 \) is hydrogen and \( R_4 \) is selected from trifluoro-methoxy, trifluoro-methyl-thio and chloro-difluoro-methoxy.

5. The compound of claim 4 selected from:
6. The compound of claim 2 in which: \( Y \) is \( \text{CH} \) and \( R_2 \) is selected from hydroxy, \( \text{Ci-4alkoxy} \), methoxy-carbonyl, 3,6-dihydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl, tetrahydro-2H-pyran-4-yl-oxy and cyclobutyl; wherein said \( \text{Ci-4alkoxy} \), cyclobutyl or tetrahydro-2H-pyran-4-yl of \( R_2 \) can be unsubstituted or substituted with 1 to 3 groups independently selected from halo, hydroxy, cyano, \( \text{Ci-4alkoxy} \), morpholino, piperazinyl and \( NR_{5a}R_{5b} \); wherein \( R_{5a} \) is selected from hydrogen and \( \text{Ci-4alkyl} \); and \( R_{5b} \) is selected from hydroxy-ethyl; wherein said piperazinyl substituent of \( R_2 \) can be unsubstituted or further substituted with \( \text{C}_{1,4} \text{alkyl} \).

7. The compound of claim 6 in which: \( R_2 \) is selected from methoxy, ethoxy, morpholino-ethoxy, hydroxy-ethoxy, pyrrolidinyl-ethoxy, hydroxy, methoxy-ethoxy, (hydroxy-ethyl)amino-ethoxy, (tetrahydro-2H-pyran-4-yl)oxy and piperazinyl-ethoxy; wherein said piperazinyl-ethoxy is unsubstituted or substituted with isobutyl.

8. The compound of claim 7 in which: \( R_3 \) is hydrogen and \( R_4 \) is selected from trifluoro-methoxy and chloro-difluoro-methoxy.

9. The compound of claim 8 selected from:
10. A pharmaceutical composition comprising a compound of claim 1, admixed with at least one pharmaceutically acceptable excipient.

11. The pharmaceutical composition of claim 10, wherein the excipient is selected from the group consisting of corn starch, potato starch, tapioca starch, starch paste, pre-gelatinized starch, sugars, gelatin, natural gums, synthetic gums, sodium alginate, alginic acid, tragacanth, guar gum, cellulose, ethyl cellulose, cellulose acetate, carboxymethyl cellulose calcium, sodium carboxymethylcellulose, methyl cellulose, hydroxypropyl methylcellulose, microcrystalline cellulose, magnesium aluminum silicate, polyvinyl pyrrolidone, talc, calcium carbonate, powdered cellulose, dextrates, kaolin, mannitol, silicic acid, sorbitol, agar-agar, sodium carbonate, croscarmellose sodium, crospovidone, polacrilin potassium, sodium starch glycolate, clays, sodium stearate, calcium stearate, magnesium stearate, stearic acid, mineral oil, light mineral oil, glycerin, sorbitol, mannitol, polyethylene glycol, other glycols, sodium lauryl sulfate, hydrogenated vegetable oil, peanut oil, cottonseed oil, sunflower oil, sesame oil, olive oil, corn oil, soybean oil, zinc stearate, sodium oleate, ethyl oleate, ethyl laureate, silica, and combinations thereof.
12. The pharmaceutical composition of claim 10, further comprising an additional therapeutic agent.

13. The pharmaceutical composition of claim 12, wherein the additional therapeutic agent is selected from an anticancer compound, an analgesic, an antiemetic, an antidepressant, and an anti-inflammatory agent.

14. A method to treat cancer, comprising administering to a subject in need of such treatment an effective amount of a compound of claim 1 or a pharmaceutical composition of claim 10.

15. The method of claim 14, wherein the cancer is selected from lung carcinoma, pancreatic carcinoma, bladder carcinoma, colon carcinoma, myeloid disorders, prostate cancer, thyroid cancer, melanoma, adenomas and carcinomas of the ovary, eye, liver, biliary tract, and nervous system.

16. The method of claim 15, further comprising administering to the subject an additional therapeutic agent.

17. The method of claim 16, wherein the additional therapeutic agent comprises an anticancer drug, a pain medication, an antiemetic, an antidepressant or an anti-inflammatory agent.

18. The method of claim 17, wherein the additional therapeutic agent is a different BCR-ABL1 inhibitor.

19. The method of claim 18, wherein the BCR-ABL1 inhibitor is selected from imatinib, nilotinib, dasatinib, bosutinib, ponatinib and bafetinib.

20. The method of claim 19, wherein the BCR-ABL1 inhibitor is selected from nilotinib and dasatinib.
21. A method to treat a condition mediated by BCR-ABL1, comprising administering to a subject in need thereof an effective amount of a compound of claim 1, or a pharmaceutical composition of claim 10.

22. The method of claim 21 wherein the BCR-ABL1 is a mutant BCR-ABL1 selected from V299L, T315I, F317I/L, Y253F/H, E255K/V, and F359C/V.

23. A method of treating metastatic invasive carcinomas by administering to a subject in need of such treatment an effective amount of a compound of claim 1 or a pharmaceutical composition of claim 10.

24. A method of treating a virus by administering to a subject in need of such treatment an effective amount of a compound of claim 1 or a pharmaceutical composition of claim 10.

25. The method of claim 24 wherein the virus is selected from a Pox virus and an Ebola virus.

26. A method of treating a c-ABL mediated CNS disorder selected from Alzheimer's and Pick disease by administering to a subject in need of such treatment a compound of claim 1 or a pharmaceutical composition of claim 10.

* Special categories of cited documents:
  * "A" document defining the general state of the art which is not considered to be of particular relevance
  * "E" earlier application or patent but published on or after the international filing date
  * "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
  * "O" document referring to an oral disclosure, use, exhibition or other means
  * "P" document published prior to the international filing date but later than the priority date claimed
  * "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
  * "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
  * "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
  * "Z" document member of the same patent family

Date of the actual completion of the international search 10 September 2013

Date of mailing of the international search report 16/09/2013

Name and mailing address of the ISA/
European Patent Office, P.B. 5818 Patentlaan 2 NL - 2280 HV Rijswijk
Tel. (+31-70) 340-2040, Fax: (+31-70) 340-3016

Authorized officer Cortes, Jose

Form PCT/ISA210 (second sheet) (April 2005)
