United States Patent Office.

JAMES H. DOWNS, OF NEW HAVEN, CONNECTICUT, ASSIGNOR TO
C. COWLES & CO., OF SAME PLACE.

Design No. 3,239, dated November 17, 1868.

DESIGN FOR A COACH-LAMP GLASS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern :

Be it known that I, JAMES H. DOWNS, of New Haven, in the county of New Haven, and State of Connecticut, have invented a new Design for Coach-Lamp Glass ; and I do hereby declare the following, when taken in connection with the accompanying drawings, and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent, in—

Figure 1, a perspective view ;

Figure 2, a sectional view of the glass ; and in

Figures 3 and 4, partial views of a coach-lamp to illustrate the application of the glass.

This invention relatés to a design for what is known to the trade as coach-lamp glass, that is, glass to form the sides of coach-lamps, and the invention consists in forming the glass by three curves.

To enable others to understand my invention, I will fully describe the same as illustrated in the accompanying drawings.

In the process of manufacture of the glass, cut to the proper size, the glass is curved longitudinally, as seen in fig. 1, and into the form denoted by the sectional view, fig. 2, the central convex surface A, designed for the outside, running into a concave surface, B B, toward each edge. This glass may be used in lamps, in which the body is formed as seen in fig. 3, the glass forming one side, as denoted by corresponding letters. In this case the glass runs longitudinally across, so as to form the side whole. In fig. 4 the glass is set vertically. The application of the glass to the coach-lamp is no part of my invention.

Having fully described my invention,

What I claim as new, and desire to secure by Letters Patent, is—

The design for a coach-lamp glass, herein fully described, and illustrated in figs. 1 and 2.

JAMES H. DOWNS.
