(54) Title: CUSTOMIZED TELECOMMUNICATION SERVICE

## (57) Abstract

A customized telecommunication service (12) comprising a service related component, referred to as a service shell (1), and a number of customization parts (10, 11) open to customization by a service provider. The service shell (1) is designed by a system vendor with due consideration taken to the fact that the service must not interfere in a non desired way with other existing services. The services shell (1) comprises customization points to which the customization parts are added. Each customization point comprises an individual customization interface (7, 8) defining the scope of actions open to customization in the service shell. The service provider selects, among said actions, those which will build the desired function of the customization part.
