(54) Title: A GRAPHICS DISPLAY

(57) Abstract: A graphics display of the present invention has a support with a curved forward surface for supporting one or more flexible sheets having graphics depicted thereon. At least one generally transparent flexibly resilient retaining cover is mounted for movement between a first position away from the support to permit the one or more flexible sheets to be positioned on the curved forward surface and a sheet retaining position in which the at least one cover is resiliently flexed to have a configuration in which it holds the one or more flexible sheets against the curved forward surface of the support. Also, the graphics display may have a support and at least one holder for holding one or more graphic sheets in a curved configuration in which the graphic sheet(s) are in contact with the curved forward surface of the support. The graphics display may have a light system for illuminating the one or more graphics sheets that is moveable between an operative position and a collapsed position.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
