UNITED STATES PATENT OFFICE.

GEORGIE DORSEY, OF SAN FRANCISCO, CALIFORNIA.

HOT-WATER-BAG COVER.

Application filed July 14, 1926, Serial No. 122,441. Renewed January 22, 1929.

This invention relates to improvements in covers for hot water bottles embodying a pocket provided with a flap to completely enclose the bottle whereby the usual necessity of wrapping a towel around the bottle is obviated.

Another object of the invention contemplates an additional pocket adapted to wholly receive the first mentioned pocket to prevent displacement of the bottle and to prevent the same from touching the body of the user.

With the above and other objects in view, the invention further includes the following novel features and details of construction, to be hereinafter more fully described, illustrated in the accompanying drawings and pointed out in the appended claim.

In the drawings:—

Figure 1 is an elevation of my invention illustrating the manner in which a hot water bottle may be placed therein.

Figure 2 is a transverse section taken on line 2—2 of Figure 1.

Figure 3 is a diametric plan view of my invention when open.

Figure 4 is a vertically sectional view taken on line 4—4 of Figure 3.

Figure 5 is a horizontal section taken on line 5—5 of Figure 3.

Referring to the drawing in detail, wherein like characters of reference denote corresponding parts, the reference character 10 indicates a length of material preferably formed of shaker or outing flannel having one end 11 folded upon itself and stitched as indicated at 12 upon the outer marginal edges thereof while its remaining edge forming a hem 12 whereby a pocket 13 is created is opened and hemmed as indicated at 12′. The opposite end 14 is folded upon itself and stitched upon its side and lower end to the material 10 as indicated at 15 whereby the remaining side of the end 14 is open to provide a pocket 16.

When desirous of placing or using a hot water bottle, such as indicated at 17 and wherein it is intended to be brought against the body of a person the hot water bottle is placed within the pocket 16 and the pocket in and of itself is folded upon the longitudinal row of stitching 15 and positioned within the pocket 13. The hot water bag 17 is completely inclosed upon all sides and compactly arranged as clearly illustrated in Figures 1 and 2 respectively.

It will thus be noted that owing to the inclosure of the bottle that it will not become accidentally displaced therefrom and sufficient heat thrown off and radiated through the material 10 to the body of the user whereby the usual scorching and burning effect of a bare hot water bottle against the body of a person is eliminated and overcoming the difficulty of wrapping a hot water bottle in a towel and using safety pins for securing the latter thereto.

The invention is susceptible of various changes in its form, proportions and minor details of construction, and the right is herein reserved to make such changes as properly fall within the scope of the appended claim.

Having thus described the invention, what is claimed is:—

A hot water bag cover comprising a length of material having one end folded upon itself and closed upon three sides to provide an elongated pocket, said pocket having one end open to receive the bag, and the remaining length of the material folded and stitched upon the ends and outer side and having its inner side open to provide a pocket adapted to wholly receive the first mentioned pocket and bag when the material is folded between the pockets.

In testimony whereof I affix my signature.

MRS. GEORGIE DORSEY.
