D 16520

UNITED STATES PATENT OFFICE.

DAVID F. DAVIDS, OF NEW YORK, N. Y., ASSIGNOR TO THE THADDEUS
DAVIDS COMPANY, OF SAME PLACE.

DESIGN FOR A BOTTLE.

SPECIFICATION forming part of Design No. 16,520, dated February 16, 1886.

Application filed December 18, 1885. Serial No. 186,094. Term of patent 7 years.

To all whom it may concern:

Be it known that I, DAVID F. DAVIDS, residing in the city and county of New York, in the State of New York, have invented and produced a new and original Design for Bottles, of which the following is a specification.

The accompanying drawing forms a part of this specification, and is an elevation representing the bottle with a stopper ready for use.

The leading feature of my design consists in the combination, with a bottle having the body, shoulders, and neck hereinafter described, of two bands, one near the base and the other near the top of the body.

In the drawing, A is the lower band; B, the smooth cylindrical body; C, the upper band; D, hemispherical shoulders; E, the neck; F, the top flange, and G the flange of a stopper.

The bottom band, A, is a little wider than the upper band, C. The two are of about equal prominence. The height of the body is about one and a half time the diameter; but these points may be varied.

It is an important feature of my design that the bands A C are flat, and not semicircular or oval.

I claim—

The design for a bottle herein described, which consists of the cylindrical body B, hemispherical shoulder D, and neck E, and flat bands A C, the former at the base of the body and the latter at the junction of the body with the shoulder, as shown.

DAVID F. DAVIDS.
