UNITED STATES PATENT OFFICE.

JOHN R. CAZIER, OF NORTH EAST, PENNSYLVANIA.

IMPROVEMENT IN IRONING-TABLES.

Specification forming part of Letters Patent No. 126,016, dated April 23, 1872.

To all whom it may concern:

Be it known that I, JOHN R. CAZIER, of North East, in the county of Erie and in the State of Pennsylvania, have invented certain new and useful Improvements in Ironing-Boards; and do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawing and to the letters of reference marked thereon making a part of this specification.

The nature of my invention consists in the construction of an ironing-board, and also in the means for attaching an ironing-board to a table, all of which will be hereinafter more fully set forth.

In order to enable others skilled in the art to which my invention appertains to make and use the same, I will now proceed to describe its construction and operation, referring to the annexed drawing, in which—

Figure 1 is a perspective view of my ironing-board attached to a table, and Fig. 2 is an enlarged side view of one of the fastenings.

A represents an ordinary ironing-board, of any suitable construction, provided with a flange, B, along each side, as shown, said flanges being below the upper surface of the board. At the inner end of each flange B is attached a hook, C, which projects downward, and is of such size as to fit over the edge of a table, D, and thus hold the board A on the

table. These hooks may be permanently attached to the flanges B B, or to the board A when the flanges are not used; or they may be loose or separate from the board or flanges, and put on when needed. The lower end of each hook may have a swell or enlargement with female screw-threads for the passage of a set-screw, G, which may be turned up, and thus more firmly secure the ironing-board to the table.

The hooks, described at the inner end of the ironing-board, may be used equally as well at the sides of the table, when so desired, as shown by dotted lines in Fig. 1; and another similar fastening may be used, with or without the set-screw, at the other end of the flanges, or on the side near this end.

Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The combination, with a table, D, of the board A having flanges B B and hook-clamps C C, all as and for the purposes set forth.

In testimony that I claim the foregoing I have hereunto set my hand and seal this 7th day of March, 1872.

JOHN R. CAZIER. [L. S.]
