TICKET AND MONEY HOLDER

James W. Price, 3300 71st St. N.,
St. Petersburg, Fla. 33702

Filed Apr. 22, 1965, Ser. No. 450,025
1 Claim. (Cl. 150—39)

The present invention relates to ticket and money holders for use at race tracks and particularly dog race tracks, and in particular a relatively small pocket-book or pouch having a plurality of pockets in one end and a single pocket in one side and wherein the pocket at the end may be used for tickets whereas the pocket in one side may be used for folded paper money.

The purpose of this invention is to provide a money and ticket holder in which money for placing bets particularly in dog racing, is maintained in separate pockets, and thereby segregated in denominations suitable for race tracks.

Various types of pocket-books, pouches, folders, and the like, have been developed for carrying paper money, such as bills, tickets, cards, and the like, and although such devices are suitable for carrying cards, conventional money, and the like, they do not satisfy the requirements of readily available money for use at race tracks and particularly dog tracks.

The object of this invention is, therefore, to provide a relatively small, compartmented holder in which tickets are inserted and removed from pockets at one end and folded paper money is similarly inserted in and removed from one side.

Another object of the invention is to provide a ticket and money holder from which articles are readily removed.

Another important object of the invention is to provide a ticket and money holder in which tickets and money of certain denominations are removed from the holder without looking toward the holder.

It is yet another object of the invention to provide a ticket and money holder which may also be used as a change purse.

A further object of the invention is to provide a holder for tickets and money in which outer surfaces of the holder may be used for advertising.

A still further object of the invention is to provide a holder for conventional paper money and tickets in which the holder is of simple and economical construction.

Other and further objects and advantages of the present invention will be apparent from the following detailed description, drawing and claims, the scope of the invention not being limited to the illustration of the drawing as the drawing is only for the purpose of illustrating a method by which the principles of this invention can be applied.

Other embodiments of the invention utilizing the same or equivalent principles may be used and structural changes may be made as desired by those skilled in the art without departing from the present invention and the purview of the appended claims.

Other features and advantages of the invention will appear from the following description taken in connection with the drawing, wherein:

FIGURE 1 is a perspective view illustrating the design and arrangement of the ticket and money holder in which edges of pockets at the upper end of the holder are arcuate.

FIGURE 2 is a sectional plan through the holder, taken on line 2—2 of FIGURE 1.

FIGURE 3 is an exploded view showing the elements of the ticket and money holder.

FIGURE 4 is a view showing a modification wherein

the outer edges of the pockets in the end of the holder are inclined instead of arcuate.

FIGURE 5 is a sectional plan taken on line 5—5 of FIGURE 4 showing the holder assembly.

FIGURE 6 is an exploded view showing the blank from which the holder is formed.

While one embodiment of the invention is illustrated in the above-referred-to drawing, it is to be understood that it is merely for the purpose of illustration and that various changes in construction may be resorted to in the course of manufacture in order that the invention may be utilized to the best advantage according to circumstances which may arise, without in any manner departing from the spirit and intention of the device, which is to be limited only in accordance with the appended claims. And while there is stated the primary field of utility of the invention it remains obvious that it may be employed in any other capacity wherein it may be found applicable.

In the accompanying drawing, and in the following specification, the same reference characters are used to designate the same parts and elements throughout and in which the numeral **10** refers to a sheet of material folded on a line **11**, providing a front panel **12** and a rear panel **13**, and the panels **12** and **13** provide a cover for a filler **14** having a front panel **15** and a rear panel **16**, being folded on a line **17**.

With the filler **14** in the cover, as illustrated in FIGURES 2 and 3, the edges **18** of the panel **12** are secured by stitches **19** to an edge **20** of the panel **15**; and the edge **21** of the panel **13** is secured by stitches **22** to the edge **23** of the panel **16**.

The upper edges of the panels **12** and **13**, and **15** and **16** are stitched together from the points **23** to the points **24** and also from the points **25** to the points **26** at the op providing openings **27** and **38** with arcuate lower edges **29** and **30** and through which tickets, and the like, may be inserted in and removed from the pockets. The lower edges of the panels **12, 13, 15** and **16** are secured together by stitches **31** closing lower ends of the pockets.

In the design shown in FIGURES 4, 5 and 6 a sheet of material **32** is folded on a line **33**, forming panels **34** and **35**, and the panel **34** is folded on the line **36** forming panels **37** and **38**. The panel **35** is also folded on a line **39** providing panels **40** and **41** in the upper part of the holder.

With the panels folded, as shown in FIGURE 5 and secured in the folded position by stitches **42** pockets **43** and **44** are provided in the upper end of the holder and a pocket **45** is provided in one side. With the parts of the ticket and money holder of the design shown in FIGURE 4, assembled as shown the edges **46** of outer panels **41** and **38** are inclined as shown in FIGURE 4.

From the foregoing description, it is thought to be obvious that a ticket and money holder constructed in accordance with this invention is particularly well adapted for use, by reason of the convenience and facility with which it may be assembled and used, and it will also be obvious that the invention is susceptible of some change and modification without departing from the principles and spirit thereof, and for this reason it is not desired to be limited to the precise arrangement and formation of the several parts herein shown in carrying out the invention in practice, except as claimed.

What is claimed is:

In a paper money holder, the combination which comprises a sheet of material folded on a line midway of the length thereof providing a front panel and a rear panel with depending arcuate recesses in the upper edges thereof, and a filler also having a front panel and a rear panel and folded to correspond with said folded sheet of material, said filler being positioned within said sheet with

the fold of the filler adjacent said folded portion of the sheet, said filler and sheet being stitched together along some of the remaining edges to provide pockets between said filler front and rear panels and between said filler and sheet, said pockets between said filler and sheet having openings solely at said edge containing said arcuate recesses and the pocket between said filler front and rear panels having an opening solely at the edge opposite said fold line.
