(57) **ABSTRACT**

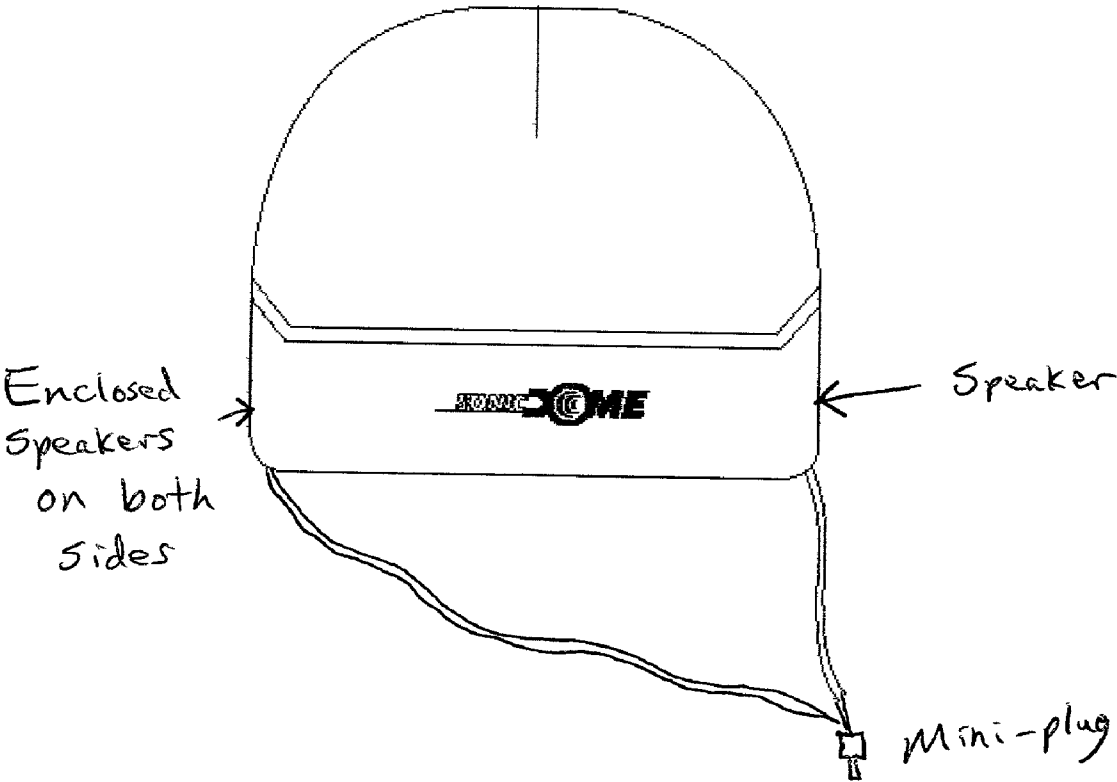

The SonicDome is a ski hat containing internal headphone speakers. An internal connecting wire drops down from the hat. At the end of that wire is a stereo mini-plug that can connect to most portable listening and viewing devices (CD Walkmans, MP3 players, small TVs). By combining two widely used items—headphones and headgear, the SonicDome will allow the wearer to enjoy music, books on tape, television, etc., while partaking in outdoor activities in cold weather.

SONICDOME

[0001] What I claim as my invention is a product known as "SonicDome." This design is a winter hat that has built-in headphones. When connected to any hand-held, portable television or stereo unit, this hat allows the person to hear pre-recorded music, live radio or television broadcasts. At the same time the person wearing the SonicDome benefits from keeping his/her head warm in cold weather. It is anticipated that this product will contain various logos on its front and/or sides, upon approval from the proper licensing authorities.

[0002] The product is made of fleece material for the inner and outer shells and surrounds the headphones. The headphone speakers are sewn near the ear area with the cord exiting from both of the ear sides, allowing it to be plugged into the selected portable device using a standard mini-plug, or with an RCA plug adapter.

[0003] This product will be manufactured for resale to the general public and/or other entities.

[0004] The SonicDome will be produced in two sizes: Medium and Large.

[0005] A diagram of the product is attached hereto and made a part hereof.

BACKGROUND OF THE INVENTION

[0006] Used as a ski cap until earphones were placed inside for entertainment purposes.

ABSTRACT OF THE DISCLOSURE

[0007] The SonicDome is ski-type hat made of fleece material that covers your ears to keep them warm. It contains earphones, one for each ear, contained within the base of the hat.

1. What I claim as my invention is the SonicDome.
