UNITED STATES PATENT OFFICE.

DANIEL L. WILCOX, OF PAWTUCKET, RHODE ISLAND.

SMOKER'S CABINET.

SPECIFICATION forming part of Letters Patent No. 245,682, dated August 16, 1881.

Application filed June 18, 1881. (No model.)

To all whom it may concern:

Be it known that I, DANIEL L. WILCOX, of Pawtucket, in the county of Providence and State of Rhode Island, have invented a new and Improved Smoker's Cabinet, of which the following is a specification.

This is an article intended to hold cigars and smoking materials. The nature of the invention is described below.

10 In the accompanying drawings, in which similar letters of reference indicate like parts, Figure 1 is an elevation of my smoker's cabinet with one of its sliding doors opened. Fig. 2 is a transverse vertical section. Fig. 3 is a horizontal section.

15 A represents the main body of the cabinet. *a* is a chamber for cigars, in which is the block C, provided with numerous openings, C', for holding the cigars D perpendicularly. This block C is pivoted at *b* to the horizontally-swinging plate or arm E, which is pivoted at *e* to the body of the cabinet. By pushing back the horizontally-sliding doors B the cigars D in the chamber *a* are exposed, and by drawing
20 out the block C, grasping the handle *c* by means of the double swivel action *b E e*, the cigars are easily removed from the block.

Above the cigar-chamber is a match-safe, F, F' being the lid, and below it is a drawer, G,

for smokers' articles, such as pipes, pouches, 30 tobacco, cigarettes, mouth-tips, &c.

Among the advantages of this device are that all the articles commonly in use by smokers may be placed in a single cabinet, thus preventing their loss or breakage; the general neat- 35 ness of its appearance, and the cheapness with which it can be made; that the cigars may be kept green for a long time by keeping the doors closed, or may be easily dried by keeping the doors open, according to the fancy of the person owning the cabinet; and the facility with 40 which cigars may be removed and replaced by means, principally, of the double swivel action of the block C.

Having thus fully described my invention, 45 what I claim, and desire to secure by Letters Patent, is—

In a smoker's cabinet provided with the cigar-chamber *a*, the combination of the main portion A, swinging plate E, pivoted at *e* to 50 the portion A, and the perforated block C, pivoted at *b* to the swinging plate, substantially as and for the purpose described.

DANIEL L. WILCOX.
