(54) **Refrigerant condenser equipped with receiver**

(57) Disclosed is a refrigerant condenser (2) equipped with a receiver (3), in which the receiver (3) is disposed on a side surface of one header pipe (6) of the condenser (2) and the receiver (3) is connected to the header pipe (6) via a connection member (4) by brazing, wherein the connection member (4) is processed from a plate material, a pair of pipe portions (21, 22) for refrigerant passage are formed integrally on the connection member (4), tip parts of the pipe portions (21, 22) are inserted into holes formed on an object member of the header pipe (6) or the receiver (3), and a surface portion of the connection member (4) around each pipe portion (21, 22) present on a side opposite to a pipe portion projecting side is formed as a ring-like surface (25, 26) at a condition where holes (27, 28) or a hole (28) and a notch (29) are provided on both sides of the ring-like surface. The manufacture and assembly of the refrigerant condenser (2) equipped with a receiver can be facilitated by improving the structure of the pipe portions and the portions therearound of the connection member.
