UNITED STATES PATENT OFFICE.

IRVING ROSENBERG, OF BRONX, NEW YORK.

BELT.

Application filed July 7, 1923. Serial No. 650,198.

This invention relates to a belt for use by bathers, the general object of the invention being to provide pockets in the belt to hold various objects such as money, toilet articles and the like.

Another object of the invention is to provide flaps for closing the pockets for preventing the objects therein from dropping out.

This invention also consists in certain other features of construction and in the combination and arrangement of the several parts to be hereinafter fully described, illustrated in the accompanying drawings and specifically pointed out in the appended claim.

In describing my invention in detail, reference will be had to the accompanying drawings wherein like characters denote like or corresponding parts throughout the several views and in which:

Figure 1 is a view of a belt constructed in accordance with this invention.

Figure 2 is a section on the line 2—2 of Figure 1.

Figure 3 is a section on the line 3—3 of Figure 1.

In these views, 1 indicates the belt which is adapted to be fastened upon the wearer, in the usual manner, by the buckle 2. This belt is provided with the vertical pockets 3 and the horizontal pocket 4. The pockets are preferably formed of flexible belting, the pockets 3, being formed by looping the belting around the belt, transversely, the rear portion being extended at its upper end to form a flap 5 which closes the open upper end of the pocket. A snap fastener 6 will hold the flap in closed position. The horizontal pocket 4 is formed by sewing a strip of belting to the belt, leaving one end free and making this end of wedge shape, to provide a flap 7 which carries a snap fastener 8. This pocket 4 is of considerable length and is mainly designed to receive a comb. The other pockets can be used for money, a mirror and other objects.

From the foregoing it will be seen that a person can carry with him in the water various articles which he might need before he returned to his bath-house and as the pockets are provided with flaps there is no danger of losing the articles while swimming or playing upon the beach.

It is thought from the foregoing description that the advantages and novel features of my invention will be readily apparent.

I desire it to be understood that I may make changes in the construction and in the combination and arrangement of the several parts, provided that such changes fall within the scope of the appended claim.

Having thus described my invention what I desire to claim as new is:

A belt of the class described having a transversely arranged strip looped around the belt transversely thereof with its side edges fastened to the belt upon the outer face thereof to form a pocket, the rear portion of this strip being extended over the normally top edge of the belt to form a flap for closing the upper end of the pocket and a fastener for holding the flap in position to close the pocket.

In testimony whereof I affix my signature.

IRVING ROSENBERG.
