54 Improved arm chandelier.

57 The present invention relates to an improved arm chandelier, comprising a body therefrom extends at least an arm (1) supporting a lighting body.

The main feature of the invention is that each arm (1) consists of an elongated element which, in its inside, comprises a cavity (3) which is open at

the top; there being moreover provided a closing body (4) which, at its ends, is provided with openings allowing for an electric wire to pass through for housing in said cavity; the closing body (4) being restrained in its position by means of the lighting body (8).
