#### (54) Method for using hard magnetic carriers in an electrographic process

(57) Methods for development of an electrostatic image are disclosed that utilize developer compositions with hard magnetic carrier compositions which can provide improved development efficiencies and reduced amounts of image carrier pick-up. The methods utilize hard magnetic carrier particles that are modified to have specific levels of resistivit, such as, for example, of from about 1x10<sup>5</sup> ohm-cm to about 1x10<sup>10</sup> ohm-cm, and a

carrier charge-to-mass of greater than about 1.0  $\mu$ C/g, which carriers can provide greater development speeds without unacceptable levels of image carrier pick-up. In embodiments, the hard magnetic materials are doped, i.e., bulk substituted, with multi-valent metals to adjust resistivity, while in other embodiments, the hard magnetic materials are coated with at least one multi-valent metal oxide.

#### Q/m versus toner concentration

CLAIMS INCURRING FEES
The present European patent application comprised at the time of filing more than ten claims.
Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.
LACK OF UNITY OF INVENTION
The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:
see sheet B
All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.
Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:
None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

# LACK OF UNITY OF INVENTION SHEET B

Application Number EP 01 11 1258

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claims: 1-20,63

Method for development of an electrostatic image making use of an electrographic developer composition containing hard magnetic carrier particles with claimed resistivity, and charge to mass ratio

2. Claims: 21-40

Method for development of an electrostatic image making use of an electrographic developer comprising a carrier with hard magnetic material substituted with at least one multivalent metal

3. Claims: 41-60

Method for development of an electrostatic image making use of an electrographic developer comprising carrier which contains a hard magnetic core and an outer surface of metal oxide including a transition zone

4. Claims: 61-62

Method for development of an electrostatic image making use of a carrier with a hard magnetic Sr /Ba /Pb ferrite doped with La.

## ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 01 11 1258

This annex lists the patent family members relating to the patent documents cited in the above–mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
