(54) Title: TUBE FLOW TURBULATOR

(57) Abstract: The tube flow turbulator, type TC-09/A-B is a unique invention, resulted from work in measuring and regulation technology, and resolving problems in this field of work. The tube flow turbulator solves the problem of dirt collection in control assemblies and enhances operation of a dirt collector. The advantage of the tube flow turbulator is that maximally reduces necessity for human intervention, and resolves problems in cases where there are no dirt collectors. It is simply installed in a closed pipeline system, between pipeline and control assembly flanges with two seals.

See patent family annex.

* Special categories of cited documents :

A document defining the general state of the art which is not considered to be of particular relevance

E earlier document but published on or after the international filing date

L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

O document referring to an oral disclosure, use, exhibition or other means

P document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
