

Claims

1. A mop cover (10) for cleaning floors, having a carrier layer (12) which, on the two narrow sides of its top side, has two pockets, spaced apart opposite one another and intended for fastening to a holder, and, on the underside, is provided with a mop-material layer (16), characterized in that
 - the edge (18) of the mop-material layer (16) is connected to an at least partially reinforced surround (20) of the top side (14) of the carrier layer (12),
 - the at least partial reinforcement (38) is provided on the inner edge (36) of the surround, and
 - the surround (20) is fastened, in the region of said reinforcement (38), on the underlying carrier layer (12) by a stiffening seam (40).
2. A mop cover according to claim 1, characterized in that the edge (18) of the mop-material layer (16) is connected to the surround (20) of the carrier layer (12) by an inner seam (28).
3. A mop cover according to either of claims 1 and 2, characterized in that the surround (20) of the carrier layer (12) consists of a border (30) which is closed by sewing of its two free longitudinal edges (32, 34) by means of the inner seam (28).
4. A mop cover according to any one of claims 1 to 3, characterized in that the closed, inner border edge (36) of the top-side surround (20) is reinforced by a flexible, longitudinally extending member.
5. A mop cover according to claim 4, characterized in that the flexible reinforcement (38) of the inner border edge (36) of the surround (20) consists of a rot-resistant cord- or wire-like material (38).
6. A mop cover according to either of claims 4 and 5, characterized in that the cord-like or wire-like reinforcement material (38) of the inner border edge (36) of the surround (20) is fixed on the top side of the carrier layer (12) by a longitudinally extending reinforcement seam (40) which extends closely along the reinforcement material (38), on that side of the latter which faces an outer edge (42) of the mop cover (10), and is connected to the carrier layer (12).
7. A mop cover according to any one of claims 1 to 6, which has a rectangular basic shape, characterized in that, by means of the reinforcement seam (40), a material section (48) is fastened on the two narrow sides (44, 46) of the carrier layer (12), between the surround (20) and the carrier layer (12), forming pockets (50) for the insertion of the holder.

8. A mop cover according to claim 7, characterized in that an edge which bounds a pocket opening and belongs to the material section (48) is reinforced by a border portion (52).
9. A mop cover according to any one of claims 1 to 8, characterized in that the surround (20) and the material sections (48) which form the pocket (50) are produced from the material which forms the carrier layer (12).
10. A mop cover according to any one of claims 1 to 9, characterized in that the carrier layer (12) consists of a strong polyester fabric.
11. A mop cover according to any one of claims 1 to 9, characterized in that the mop-material layer (16) consists of a mixed fabric of cotton and polyester fibres.

Revendications

1. Garniture de balai (10) pour le nettoyage des sols, comprenant une couche de base (12) qui est pourvue, sur les deux petits côtés de sa face supérieure, de deux poches situées à distance l'une en face de l'autre servant à fixer la garniture sur un élément de support, et qui est garnie d'une couche de matière de balayage (16) sur sa face inférieure, caractérisée en ce que
 - le bord (18) de la couche de matière de balayage (16) est relié à une bordure (20) au moins partiellement renforcée de la face supérieure (14) de la couche de base (12),
 - le renfort (38) au moins partiel est prévu sur le bord intérieur (36) de la bordure, et
 - dans la région de ce renfort (38), la bordure (20) est fixée sur la couche de base (12) située en dessous par une couture de renfort (40).
2. Garniture de balai selon la revendication 1, caractérisée en ce que la liaison du bord (18) de la couche de matière de balayage (16) avec la bordure (20) de la couche de base (12) est formée par une couture intérieure (28).
3. Garniture de balai selon la revendication 1 ou 2, caractérisée en ce que la bordure (20) de la couche de base (12) est formée par un ourlet (30) qui est fermé au moyen de la couture intérieure (28) qui coud ses deux bords longitudinaux libres (32, 34).
4. Garniture de balai selon l'une des revendications 1 à 3, caractérisée en ce que le bord intérieur fermé (36) de l'ourlet de la bordure (20) située sur la face supérieure est renforcé par un objet flexible s'étendant longitudinalement.
