(54) Title: ESTER LINKED MACROLIDES USEFUL FOR THE TREATMENT OF MICROBIAL INFECTIONS

(57) Abstract: The present invention relates to 14- or 15-membered macrolides substituted at the 4" position of formula (I) and pharmaceutically acceptable derivatives thereof, to processes for their preparation and their use in therapy or prophylaxis of systemic or topical microbial infections in a human or animal body.

WO 2005/108412 A1

**ESTER LINKED MACROLIDES USEFUL FOR THE TREATMENT OF MICROBIAL  
INFECTIONS**

5

**FIELD OF THE INVENTION**

The present invention relates to novel semi-synthetic macrolides having antimicrobial activity, in particular antibacterial activity. More particularly, the invention relates to 14- and 10 15-membered macrolides substituted at the 4" position, to processes for their preparation, to compositions containing them and to their use in medicine.

**BACKGROUND OF THE INVENTION**

15 Macrolide antibacterial agents are known to be useful in the treatment or prevention of bacterial infections. However, the emergence of macrolide-resistant bacterial strains has resulted in the need to develop new macrolide compounds. For example, EP 0 895 999 describes derivatives modified at the 4" position of the macrolide ring having antibacterial activity.

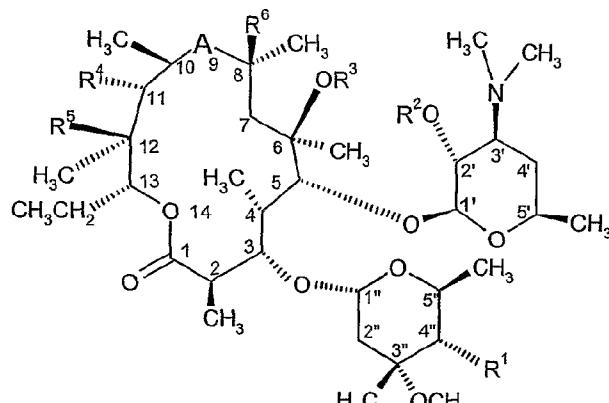

20

According to the present invention, we have now found novel 14- and 15-membered macrolides substituted at the 4" position which also have antimicrobial activity.

**SUMMARY OF THE INVENTION**

25

Thus, the present invention provides compounds of general formula (I)

(I)

wherein

5 A is a bivalent radical selected from  $-\text{C}(\text{O})-$ ,  $-\text{C}(\text{O})\text{NH}-$ ,  $-\text{NHC}(\text{O})-$ ,  $-\text{N}(\text{R}^7)\text{CH}_2-$ ,  
 $-\text{CH}_2\text{N}(\text{R}^7)-$ ,  $-\text{CH}(\text{NR}^8\text{R}^9)-$  and  $-\text{C}(\text{=NR}^{10})-$ ;

10  $\text{R}^1$  is  $-\text{OC}(\text{O})(\text{CH}_2)_d\text{XR}^{11}$ ;

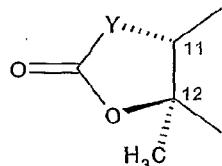

$\text{R}^2$  is hydrogen or a hydroxyl protecting group;

$\text{R}^3$  is hydrogen,  $\text{C}_{1-4}$ alkyl, or  $\text{C}_{3-6}$ alkenyl optionally substituted by 9 to 10 membered fused  
10 bicyclic heteroaryl;

$\text{R}^4$  is hydroxy,  $\text{C}_{2-6}$ alkenyloxy optionally substituted by 9 to 10 membered fused bicyclic  
heteroaryl, or  $\text{C}_{1-6}$ alkoxy optionally substituted by  $\text{C}_{1-6}$ alkoxy or  $-\text{O}(\text{CH}_2)_c\text{NR}^7\text{R}^{12}$ ,

$\text{R}^5$  is hydroxy, or

5 and pharmaceutically acceptable derivatives thereof.

#### DETAILED DESCRIPTION OF THE INVENTION

The term "pharmaceutically acceptable" as used herein means a compound which is suitable  
10 for pharmaceutical use. Salts and solvates of compounds of the invention which are suitable  
for use in medicine are those wherein the counterion or associated solvent is  
pharmaceutically acceptable. However, salts and solvates having non-pharmaceutically  
acceptable counterions or associated solvents are within the scope of the present invention,  
for example, for use as intermediates in the preparation of other compounds of the invention  
15 and their pharmaceutically acceptable salts and solvates.

The term "pharmaceutically acceptable derivative" as used herein means any  
pharmaceutically acceptable salt, solvate or prodrug, e.g. ester, of a compound of the  
invention, which upon administration to the recipient is capable of providing (directly or  
20 indirectly) a compound of the invention, or an active metabolite or residue thereof. Such  
derivatives are recognizable to those skilled in the art, without undue experimentation.  
Nevertheless, reference is made to the teaching of Burger's Medicinal Chemistry and Drug  
Discovery, 5<sup>th</sup> Edition, Vol 1: Principles and Practice, which is incorporated herein by  
reference to the extent of teaching such derivatives. Preferred pharmaceutically acceptable  
25 derivatives are salts, solvates, esters, carbamates and phosphate esters. Particularly preferred  
pharmaceutically acceptable derivatives are salts, solvates and esters. Most preferred  
pharmaceutically acceptable derivatives are salts and esters.

The compounds of the present invention may be in the form of and/or may be administered  
30 as a pharmaceutically acceptable salt. For a review on suitable salts see Berge *et al.*, *J.*  
*Pharm. Sci.*, 1977, 66, 1-19.

Typically, a pharmaceutical acceptable salt may be readily prepared by using a desired acid  
or base as appropriate. The salt may precipitate from solution and be collected by filtration

or may be recovered by evaporation of the solvent. For example, an aqueous solution of an acid such as hydrochloric acid may be added to an aqueous suspension of a compound of formula (I) and the resulting mixture evaporated to dryness (lyophilised) to obtain the acid addition salt as a solid. Alternatively, a compound of formula (I) may be dissolved in a 5 suitable solvent, for example an alcohol such as isopropanol, and the acid may be added in the same solvent or another suitable solvent. The resulting acid addition salt may then be precipitated directly, or by addition of a less polar solvent such as diisopropyl ether or hexane, and isolated by filtration.

10 Suitable addition salts are formed from inorganic or organic acids which form non-toxic salts and examples are hydrochloride, hydrobromide, hydroiodide, sulphate, bisulphate, nitrate, phosphate, hydrogen phosphate, acetate, trifluoroacetate, maleate, malate, fumarate, lactate, tartrate, citrate, formate, gluconate, succinate, pyruvate, oxalate, oxaloacetate, 15 trifluoroacetate, saccharate, benzoate, alkyl or aryl sulphonates (eg methanesulphonate, ethanesulphonate, benzenesulphonate or p-toluenesulphonate) and isethionate. Representative examples include trifluoroacetate and formate salts, for example the bis or tris trifluoroacetate salts and the mono or diformate salts, in particular the tris or bis trifluoroacetate salt and the monoformate salt.

20 Pharmaceutically acceptable base salts include ammonium salts, alkali metal salts such as those of sodium and potassium, alkaline earth metal salts such as those of calcium and magnesium and salts with organic bases, including salts of primary, secondary and tertiary amines, such as isopropylamine, diethylamine, ethanolamine, trimethylamine, dicyclohexyl amine and N-methyl-D-glucamine.

25 Compounds of the invention may have both a basic and an acidic centre may therefore be in the form of zwitterions.

Those skilled in the art of organic chemistry will appreciate that many organic compounds 30 can form complexes with solvents in which they are reacted or from which they are precipitated or crystallized. These complexes are known as "solvates". For example, a complex with water is known as a "hydrate". Solvates of the compound of the invention are within the scope of the invention. The salts of the compound of formula (I) may form solvates (e.g. hydrates) and the invention also includes all such solvates.

The term "prodrug" as used herein means a compound which is converted within the body, e.g. by hydrolysis in the blood, into its active form that has medical effects.

Pharmaceutically acceptable prodrugs are described in T. Higuchi and V. Stella, "Prodrugs

5 as Novel Delivery Systems", Vol. 14 of the A.C.S. Symposium Series, Edward B. Roche, ed., "Bioreversible Carriers in Drug Design", American Pharmaceutical Association and Pergamon Press, 1987, and in D. Fleisher, S. Ramon and H. Barbra "Improved oral drug delivery: solubility limitations overcome by the use of prodrugs", Advanced Drug Delivery Reviews (1996) 19(2) 115-130, each of which are incorporated herein by reference.

10

Prodrugs are any covalently bonded carriers that release a compound of structure (I) *in vivo* when such prodrug is administered to a patient. Prodrugs are generally prepared by

modifying functional groups in a way such that the modification is cleaved, either by routine manipulation or *in vivo*, yielding the parent compound. Prodrugs include, for

15 example, compounds of this invention wherein hydroxy, amine or sulphydryl groups are bonded to any group that, when administered to a patient, cleaves to form the hydroxy, amine or sulphydryl groups. Thus, representative examples of prodrugs include (but are not limited to) acetate, formate and benzoate derivatives of alcohol, sulphydryl and amine

functional groups of the compounds of structure (I). Further, in the case of a carboxylic acid (-COOH), esters may be employed, such as methyl esters, ethyl esters, and the like. Esters

20 may be active in their own right and/or be hydrolysable under *in vivo* conditions in the human body. Suitable pharmaceutically acceptable *in vivo* hydrolysable ester groups include those which break down readily in the human body to leave the parent acid or its salt.

25 References hereinafter to a compound according to the invention include both compounds of formula (I) and their pharmaceutically acceptable derivatives.

With regard to stereoisomers, the compounds of structure (I) have more than one asymmetric carbon atom. In the general formula (I) as drawn, the solid wedge shaped bond indicates that

30 the bond is above the plane of the paper. The broken bond indicates that the bond is below the plane of the paper.

It will be appreciated that the substituents on the macrolide may also have one or more asymmetric carbon atoms. Thus, the compounds of structure (I) may occur as individual

enantiomers or diastereomers. All such isomeric forms are included within the present invention, including mixtures thereof.

Where a compound of the invention contains an alkenyl group, cis (Z) and trans (E) isomerism may also occur. The present invention includes the individual stereoisomers of the compound of the invention and, where appropriate, the individual tautomeric forms thereof, together with mixtures thereof.

Separation of diastereoisomers or cis and trans isomers may be achieved by conventional techniques, e.g. by fractional crystallisation, chromatography or HPLC. A stereoisomeric mixture of the agent may also be prepared from a corresponding optically pure intermediate or by resolution, such as HPLC of the corresponding mixture using a suitable chiral support or by fractional crystallisation of the diastereoisomeric salts formed by reaction of the corresponding mixture with a suitable optically active acid or base, as appropriate.

The compounds of structure (I) may be in crystalline or amorphous form. Furthermore, some of the crystalline forms of the compounds of structure (I) may exist as polymorphs, which are included in the present invention.

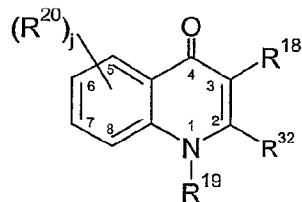

Compounds wherein R<sup>2</sup> represents a hydroxyl protecting group are in general intermediates for the preparation of other compounds of formula (I).

When the group OR<sup>2</sup> is a protected hydroxyl group this is conveniently an ether or an acyloxy group. Examples of particularly suitable ether groups include those in which R<sup>2</sup> is a trialkylsilyl (i.e. trimethylsilyl). When the group OR<sup>2</sup> represents an acyloxy group, then examples of suitable groups R<sup>2</sup> include acetyl or benzoyl.

R<sup>6</sup> is hydrogen or fluorine. However, it will be appreciated that when A is -C(O)NH- or -CH<sub>2</sub>-N(R<sup>7</sup>)-, R<sup>6</sup> is hydrogen.

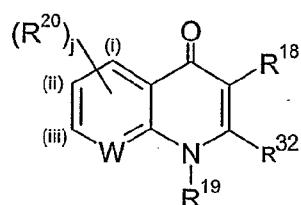

When R<sup>11</sup> is a heterocyclic group having the following structure:

10

said heterocyclic is linked in the 6 or 7 position to the X group as above defined. When present, the R<sup>20</sup> group or groups may be attached at any position on the ring. In one 5 embodiment, an R<sup>20</sup> group is attached at the 6 or 7 position.

When R<sup>11</sup> is a heterocyclic group having the following structure:

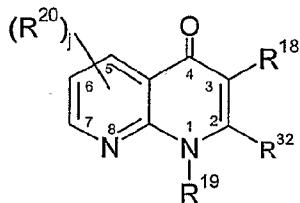

10

wherein W is -C(R<sup>31</sup>)- where R<sup>31</sup> is R<sup>20</sup> or R<sup>31</sup> and R<sup>19</sup> are linked to form the bivalent radical -O(CH<sub>2</sub>)<sub>2</sub>- , -(CH<sub>2</sub>)<sub>4</sub>-; -NR<sup>7</sup>(CH<sub>2</sub>)<sub>a</sub>- , -OCH<sub>2</sub>NR<sup>7</sup>- , -SCH<sub>2</sub>NR<sup>7</sup>- , -CH<sub>2</sub>NR<sup>7</sup>CH<sub>2</sub>- , -CH<sub>2</sub>OCH<sub>2</sub>- , -CH<sub>2</sub>SCH<sub>2</sub>- , -(CH<sub>2</sub>)<sub>a</sub>NR<sup>7</sup>- , said heterocyclic is linked in the (ii) or (iii) position to the X group as above defined.

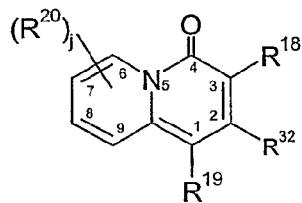

15

When R<sup>11</sup> is a heterocyclic group having the following structure:

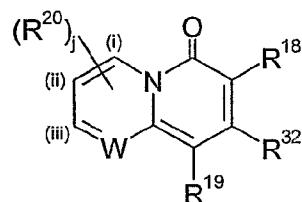

20 said heterocyclic is linked in the 6 or 7 position to the X group as defined above.

When  $R^{11}$  is a heterocyclic group having the following structure:

5 said heterocyclic is linked in the 7 or 8 position to the X group as above defined.

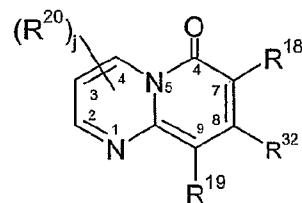

When  $R^{11}$  is a heterocyclic group having the following structure:

10

wherein W is  $-C(R^{31})-$  where  $R^{31}$  is  $R^{20}$  or  $R^{31}$  and  $R^{19}$  are linked to form the bivalent radical  $-O(CH_2)_2-$ ,  $-(CH_2)_t-$ ,  $-NR^7(CH_2)_a-$ ,  $-OCH_2NR^7-$ ,  $-SCH_2NR^7-$ ,  $-CH_2NR^7CH_2-$ ,  $-CH_2OCH_2-$ ,  $-CH_2SCH_2-$ ,  $-(CH_2)_aNR^7-$ , said heterocyclic is linked in the (i), (ii) or (iii) position to the X group as above defined. In one embodiment, the heterocyclic is linked to the 15 (i) position. In another embodiment, the heterocyclic is linked in the (ii) or (iii) position.

When  $R^{11}$  is a heterocyclic group having the following structure:

20

said heterocyclic is linked in the 2 or 3 position to the X group as above defined. In one embodiment, the heterocyclic is linked in the 2 or 3 position. In another embodiment, the heterocyclic is linked in the 4 position.

5 The term "alkyl" as used herein as a group or a part of a group refers to a straight or branched hydrocarbon chain containing the specified number of carbon atoms. For example, C<sub>1</sub>-10alkyl means a straight or branched alkyl containing at least 1, and at most 10, carbon atoms. Examples of "alkyl" as used herein include, but are not limited to, methyl, ethyl, n-propyl, n-butyl, n-pentyl, isobutyl, isopropyl, t-butyl, hexyl, heptyl, octyl, nonyl and decyl. A 10 C<sub>1</sub>-4alkyl group is preferred, for example methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl or t-butyl.

15 The term "C<sub>3</sub>-7cycloalkyl" group as used herein refers to a non-aromatic monocyclic hydrocarbon ring of 3 to 7 carbon atoms such as, for example, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl.

The term "alkoxy" as used herein refers to a straight or branched chain alkoxy group containing the specified number of carbon atoms. For example, C<sub>1</sub>-6alkoxy means a straight or branched alkoxy containing at least 1, and at most 6, carbon atoms. Examples of "alkoxy" 20 as used herein include, but are not limited to, methoxy, ethoxy, propoxy, prop-2-oxy, butoxy, but-2-oxy, 2-methylprop-1-oxy, 2-methylprop-2-oxy, pentoxy and hexyloxy. A C<sub>1</sub>-4alkoxy group is preferred, for example methoxy, ethoxy, propoxy, prop-2-oxy, butoxy, but-2-oxy or 2-methylprop-2-oxy.

25 The term "alkenyl" as used herein as a group or a part of a group refers to a straight or branched hydrocarbon chain containing the specified number of carbon atoms and containing at least one double bond. For example, the term "C<sub>2</sub>-6alkenyl" means a straight or branched alkenyl containing at least 2, and at most 6, carbon atoms and containing at least one double bond. Examples of "alkenyl" as used herein include, but are not limited to, ethenyl, 2-propenyl, 3-but enyl, 2-but enyl, 2-pentenyl, 3-pentenyl, 3-methyl-2-but enyl, 3-methylbut-2-enyl, 3-hexenyl and 1,1-dimethylbut-2-enyl. It will be appreciated that in groups of the form -O-C<sub>2</sub>-6alkenyl, the double bond is preferably not adjacent to the oxygen.

The term "alkynyl" as used herein as a group or a part of a group refers to a straight or branched hydrocarbon chain containing the specified number of carbon atoms and containing at least one triple bond. For example, the term "C<sub>2</sub>-6alkynyl" means a straight or branched alkynyl containing at least 2, and at most 6, carbon atoms and containing at least one triple

5 bond. Examples of "alkynyl" as used herein include, but are not limited to, ethynyl, 2-propynyl, 3-butynyl, 2-butynyl, 2-pentynyl, 3-pentynyl, 3-methyl-2-butynyl, 3-methylbut-2-ynyl, 3-hexynyl and 1,1-dimethylbut-2-ynyl. It will be appreciated that in groups of the form -O-C<sub>2</sub>-6alkynyl, the triple bond is preferably not adjacent to the oxygen.

10

The term "aryl" as used herein refers to an aromatic carbocyclic moiety such as phenyl, biphenyl or naphthyl.

The term "heteroaryl" as used herein, unless otherwise defined, refers to an aromatic heterocycle of 5 to 10 members, having at least one heteroatom selected from nitrogen, oxygen and sulfur, and containing at least 1 carbon atom, including both mono and bicyclic ring systems. Examples of heteroaryl rings include, but are not limited to, furanyl, thiophenyl, pyrrolyl, pyrazolyl, imidazolyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, triazolyl, oxadiazolyl, tetrazolyl, thiadiazolyl, pyridyl, pyridazinyl, pyrazinyl, pyrimidinyl, triazinyl, 20 quinolinyl, isoquinolinyl, 1,2,3,4-tetrahydroisoquinolinyl, benzofuranyl, benzimidazolyl, benzothienyl, benzoxazolyl, 1,3-benzodioxazolyl, indolyl, benzothiazolyl, furylpyridine, oxazolopyridyl and benzothiophenyl.

The term "5 or 6 membered heteroaryl" as used herein as a group or a part of a group refers 25 to a monocyclic 5 or 6 membered aromatic heterocycle containing at least one heteroatom independently selected from oxygen, nitrogen and sulfur. Examples include, but are not limited to, furanyl, thiophenyl, pyrrolyl, pyrazolyl, imidazolyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, triazolyl, oxadiazolyl, tetrazolyl, pyridyl, pyridazinyl, pyrazinyl, pyrimidinyl and triazinyl.

30

The term "9 to 10 membered fused bicyclic heteroaryl" as used herein as a group or a part of a group refers to quinolinyl, isoquinolinyl, 1,2,3,4-tetrahydroisoquinolinyl, benzofuranyl, benzimidazolyl, benzothienyl, benzoxazolyl, 1,3-benzodioxazolyl, indolyl, benzothiazolyl, furylpyridine, oxazolopyridyl or benzothiophenyl.

The term "heterocyclyl" as used herein, unless otherwise defined, refers to a monocyclic or bicyclic three- to ten-membered saturated or non-aromatic, unsaturated hydrocarbon ring containing at least one heteroatom selected from oxygen, nitrogen and sulfur. Preferably, the 5 heterocyclyl ring has five or six ring atoms. Examples of heterocyclyl groups include, but are not limited to, pyrrolidinyl, tetrahydrofuranyl, tetrahydrothiophenyl, imidazolidinyl, pyrazolidinyl, piperidyl, piperazinyl, morpholino, tetrahydropyranyl and thiomorpholino.

The term "5 or 6 membered heterocyclic group" as used herein as a group or part of a group 10 refers to a monocyclic 5 or 6 membered saturated hydrocarbon ring containing at least one heteroatom independently selected from oxygen, nitrogen and sulfur. Examples of such heterocyclyl groups include, but are not limited to, pyrrolidinyl, tetrahydrofuranyl, tetrahydrothiophenyl, imidazolidinyl, pyrazolidinyl, piperidyl, piperazinyl, morpholino, tetrahydropyranyl and thiomorpholino.

15

The term "halogen" refers to a fluorine, chlorine, bromine or iodine atom.

The terms "optionally substituted phenyl", "optionally substituted phenyl or benzyl", "optionally substituted 5 or 6 membered heteroaryl", "optionally substituted 9 to 10 20 membered fused bicyclic heteroaryl" or "optionally substituted 5 or 6 membered heterocyclic group" as used herein refer to a group which is substituted by 1 to 3 groups selected from halogen, C<sub>1-4</sub>alkyl, C<sub>1-4</sub>alkoxy, hydroxy, nitro, cyano, amino, C<sub>1-4</sub>alkylamino or diC<sub>1-4</sub>alkylamino, phenyl and 5 or 6 membered heteroaryl.

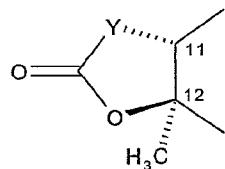

25 In one embodiment, A is -C(O)-, -C(O)NH-, -NHC(O)-, -N(R<sup>7</sup>)-CH<sub>2</sub>-, -CH<sub>2</sub>-N(R<sup>7</sup>)- or -CH(NR<sup>8</sup>R<sup>9</sup>)-. In another embodiment, A is -C(O)-, -C(O)NH-, -NHC(O)-, -CH<sub>2</sub>-N(R<sup>7</sup>)-, -CH(NR<sup>8</sup>R<sup>9</sup>)- or -C(=NR<sup>10</sup>)-. In a further embodiment, A is -C(O)-, -C(O)NH-, -NHC(O)-, -CH<sub>2</sub>-NR<sup>7</sup>- or -CH(NR<sup>8</sup>R<sup>9</sup>)-. Representative examples of A include -C(O)- and -N(R<sup>7</sup>)-CH<sub>2</sub>-.

30

A representative example of R<sup>2</sup> is hydrogen.

Representative examples of R<sup>3</sup> include hydrogen and C<sub>1-4</sub>alkyl, in particular hydrogen and methyl.

5 In one embodiment, R<sup>4</sup> is hydroxy or C<sub>1-6</sub>alkoxy, in particular hydroxy or methoxy. In a preferred embodiment, R<sup>4</sup> is hydroxy. In another embodiment, R<sup>5</sup> is hydroxy. Alternatively, R<sup>4</sup> and R<sup>5</sup> taken together with the intervening atoms form a cyclic group having the following structure:

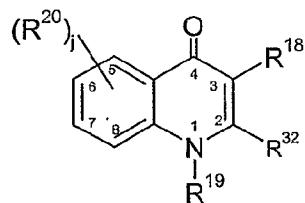

wherein Y is a bivalent radical selected from -O- and -N(R<sup>13</sup>)-.

10

A representative example of R<sup>6</sup> is hydrogen.

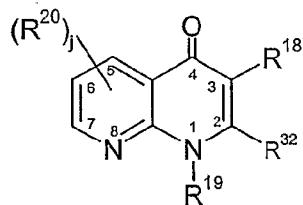

A representative example of R<sup>7</sup> is C<sub>1-6</sub>alkyl, for example C<sub>1-4</sub>alkyl, in particular methyl.

15 Representative examples of R<sup>11</sup> include heterocyclic groups having the following structures:

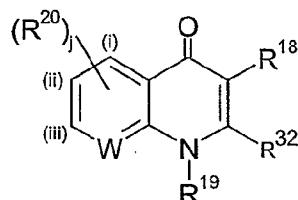

and

20

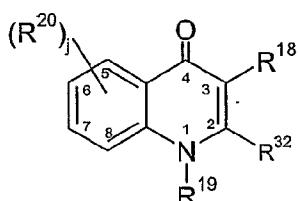

wherein the heterocyclic is linked in the 6 or 7 position to the X group as above defined, and heterocyclic groups having the following structure:

5 wherein W is -C(R<sup>31</sup>)- and R<sup>31</sup> and R<sup>19</sup> are linked to form the bivalent radical -(CH<sub>2</sub>)<sub>t</sub>-, and the heterocyclic is linked in the (ii) or (iii) position to the X group as above defined.

In one preferred embodiment, R<sup>11</sup> is a heterocyclic group having the following structure:

10

A representative example of R<sup>13</sup> is hydrogen.

In one embodiment, R<sup>18</sup> is -C(O)OR<sup>29</sup>, -C(O)NHR<sup>29</sup>, -C(O)CH<sub>2</sub>NO<sub>2</sub>, or -C(O)CH<sub>2</sub>SO<sub>2</sub>R<sup>7</sup>.

15 A representative example of R<sup>18</sup> is -C(O)OR<sup>29</sup>. In one preferred embodiment, R<sup>18</sup> is -C(O)OR<sup>29</sup> wherein R<sup>29</sup> is hydrogen.

Representative examples of R<sup>19</sup> include C<sub>1</sub>-4alkyl, in particular ethyl, and C<sub>3</sub>-7cycloalkyl, in particular cyclopropyl.

20

In one embodiment, R<sup>20</sup> is halogen, in particular chlorine or fluorine, or methoxy.

In one embodiment, R<sup>30</sup> is hydrogen or C<sub>1</sub>-4alkyl. A representative example of R<sup>30</sup> is hydrogen or methyl.

25

A representative example of  $R^{31}$  is hydrogen, or  $R^{31}$  and  $R^{19}$  are linked to form the bivalent radical  $-(CH_2)_t-$ .

A representative example of X is  $-U(CH_2)_vB(CH_2)_vD-$ ,  $-U(CH_2)_vB(CH_2)_vD(CH_2)_vE-$ ,

5  $-U(CH_2)_vB-R^{33}-$ , or  $U(CH_2)_vB(CH_2)_vD-R^{33}-$ .

Representative examples of U, B, D and E include the divalent radicals  $-N(R^{30})-$ ,  $-O-$ ,  $S(O)_Z-$ ,  
 $-N(R^{30})C(O)-$  and  $-C(O)N(R^{30})-$ .

10 A representative example of  $R^{33}$  is  $C_{1-8}$  alkyl or  $C_{2-6}$  alkynyl. In one preferred embodiment,  $R^{33}$  is propyl.

A representative example of d is 1 to 4, for example 2 to 4. A particularly preferred example of d is 2.

15 A representative example of v is 1 to 4, for example 2 or 3. A particularly preferred example is when each v independently is 2.

In one embodiment, X is  $-U(CH_2)_vB(CH_2)_vD-$  or  $-U(CH_2)_vB-R^{33}-$  wherein U is  $-O-$ , B is  $-O-$ , and D is  $-N-$ . Particularly preferred X groups are  $O(CH_2)_2O(CH_2)_2N-$  and  $-O(CH_2)_2O-(CH_2)_3-$

In one embodiment, j is 0 to 2. A representative example of j is 0 or 1.

25 A representative example of t is 3.

A representative example of z is 0.

or pharmaceutically acceptable derivatives thereof.

Compounds according to the invention also exhibit a broad spectrum of antimicrobial activity, in particular antibacterial activity, against a wide range of clinical pathogenic microorganisms. Using a standard microtiter broth serial dilution test, compounds of the invention have been found to exhibit useful levels of activity against a wide range of pathogenic microorganisms. In particular, the compounds of the invention may be active against strains of *Staphylococcus aureus*, *Streptococcus pneumoniae*, *Moraxella catarrhalis*, *Streptococcus pyogenes*, *Haemophilus influenzae*, *Enterococcus faecalis*, *Chlamydia pneumoniae*, *Mycoplasma pneumoniae* and *Legionella pneumophila*. The compounds of the invention may also be active against resistant strains, for example erythromycin resistant strains. In particular, the compounds of the invention may be active against erythromycin resistant strains of *Streptococcus pneumoniae*, *Streptococcus pyogenes* and *Staphylococcus aureus*.

15

The compounds of the invention may therefore be used for treating a variety of diseases caused by pathogenic microorganisms, in particular bacteria, in human beings and animals. It will be appreciated that reference to treatment includes acute treatment or prophylaxis as well as the alleviation of established symptoms.

20

Thus, according to another aspect of the present invention we provide a compound of formula (I) or a pharmaceutically acceptable derivative thereof for use in therapy.

25

According to a further aspect of the invention we provide a compound of formula (I) or a pharmaceutically acceptable derivative thereof for use in the therapy or prophylaxis of systemic or topical microbial infections in a human or animal subject.

30

According to a further aspect of the invention we provide the use of a compound of formula (I) or a pharmaceutically acceptable derivative thereof in the manufacture of a medicament for use in the treatment or prophylaxis of systemic or topical microbial infections in a human or animal body.

According to a yet further aspect of the invention we provide a method of treatment of the human or non-human animal body to combat microbial infections comprising administration

to a body in need of such treatment of an effective amount of a compound of formula (I) or a pharmaceutically acceptable derivative thereof.

While it is possible that, for use in therapy, a compound of the invention may be administered 5 as the raw chemical it is preferable to present the active ingredient as a pharmaceutical formulation eg when the agent is in admixture with a suitable pharmaceutical excipient, diluent or carrier selected with regard to the intended route of administration and standard pharmaceutical practice.

10 Accordingly, in one aspect, the present invention provides a pharmaceutical composition or formulation comprising at least one compound of the invention or a pharmaceutically acceptable derivative thereof in association with a pharmaceutically acceptable excipient, diluent and/or carrier. The excipient, diluent and/or carrier must be "acceptable" in the sense of being compatible with the other ingredients of the formulation and not deleterious to the 15 recipient thereof.

In another aspect, the invention provides a pharmaceutical composition comprising, as active ingredient, at least one compound of the invention or a pharmaceutically acceptable derivative thereof in association with a pharmaceutically acceptable excipient, diluent 20 and/or carrier for use in therapy, and in particular, in the treatment of human or animal subjects suffering from a condition susceptible to amelioration by an antimicrobial compound.

In another aspect, the invention provides a pharmaceutical composition comprising a 25 therapeutically effective amount of the compounds of the present invention and a pharmaceutically acceptable excipient, diluent and/or carrier (including combinations thereof).

There is further provided by the present invention a process of preparing a pharmaceutical 30 composition, which process comprises mixing at least one compound of the invention or a pharmaceutically acceptable derivative thereof, together with a pharmaceutically acceptable excipient, diluent and/or carrier.

The compounds of the invention may be formulated for administration in any convenient way for use in human or veterinary medicine and the invention therefore includes within its scope pharmaceutical compositions comprising a compound of the invention adapted for use in human or veterinary medicine. Such compositions may be presented for use in a conventional manner with the aid of one or more suitable excipients, diluents and/or carriers. Acceptable excipients, diluents and carriers for therapeutic use are well known in the pharmaceutical art, and are described, for example, in Remington's Pharmaceutical Sciences, Mack Publishing Co. (A. R. Gennaro edit. 1985). The choice of pharmaceutical excipient, diluent and/or carrier can be selected with regard to the intended route of administration and standard pharmaceutical practice. The pharmaceutical compositions may comprise as – or in addition to – the excipient, diluent and/or carrier any suitable binder(s), lubricant(s), suspending agent(s), coating agent(s), solubilising agent(s).

Preservatives, stabilisers, dyes and even flavouring agents may be provided in the pharmaceutical composition. Examples of preservatives include sodium benzoate, sorbic acid and esters of p-hydroxybenzoic acid. Antioxidants and suspending agents may be also used.

For some embodiments, the agents of the present invention may also be used in combination with a cyclodextrin. Cyclodextrins are known to form inclusion and non-inclusion complexes with drug molecules. Formation of a drug-cyclodextrin complex may modify the solubility, dissolution rate, bioavailability and/or stability property of a drug molecule. Drug-cyclodextrin complexes are generally useful for most dosage forms and administration routes. As an alternative to direct complexation with the drug the cyclodextrin may be used as an auxiliary additive, e. g. as a carrier, diluent or solubiliser. Alpha-, beta- and gamma-cyclodextrins are most commonly used and suitable examples are described in WO 91/11172, WO 94/02518 and WO 98/55148.

The compounds of the invention may be milled using known milling procedures such as wet milling to obtain a particle size appropriate for tablet formation and for other formulation types. Finely divided (nanoparticulate) preparations of the compounds of the invention may be prepared by processes known in the art, for example see International Patent Application No. WO 02/00196 (SmithKline Beecham).

The routes for administration (delivery) include, but are not limited to, one or more of: oral (e. g. as a tablet, capsule, or as an ingestable solution), topical, mucosal (e. g. as a nasal spray or aerosol for inhalation), nasal, parenteral (e. g. by an injectable form), 5 gastrointestinal, intraspinal, intraperitoneal, intramuscular, intravenous, intrauterine, intraocular, intradermal, intracranial, intratracheal, intravaginal, intracerebroventricular, intracerebral, subcutaneous, ophthalmic (including intravitreal or intracameral), transdermal, rectal, buccal, epidural and sublingual.

There may be different composition/formulation requirements depending on the different 10 delivery systems. By way of example, the pharmaceutical composition of the present invention may be formulated to be delivered using a mini-pump or by a mucosal route, for example, as a nasal spray or aerosol for inhalation or ingestable solution, or parenterally in which the composition is formulated by an injectable form, for delivery, by, for example, an 15 intravenous, intramuscular or subcutaneous route. Alternatively, the formulation may be designed to be delivered by both routes.

Where the agent is to be delivered mucosally through the gastrointestinal mucosa, it should be able to remain stable during transit though the gastrointestinal tract; for example, it 20 should be resistant to proteolytic degradation, stable at acid pH and resistant to the detergent effects of bile.

Where appropriate, the pharmaceutical compositions can be administered by inhalation, in the form of a suppository or pessary, topically in the form of a lotion, solution, cream, ointment or dusting powder, by use of a skin patch, orally in the form of tablets containing 25 excipients such as starch or lactose, or in capsules or ovules either alone or in admixture with excipients, or in the form of elixirs, solutions or suspensions containing flavouring or colouring agents, or they can be injected parenterally, for example intravenously, intramuscularly or subcutaneously. For parenteral administration, the compositions may be best used in the form of a sterile aqueous solution, which may contain other substances, for 30 example enough salts or monosaccharides to make the solution isotonic with blood. For buccal or sublingual administration the compositions may be administered in the form of tablets or lozenges, which can be formulated in a conventional manner.

It is to be understood that not all of the compounds need be administered by the same route. Likewise, if the composition comprises more than one active component, then those components may be administered by different routes.

5 The compositions of the invention include those in a form especially formulated for parenteral, oral, buccal, rectal, topical, implant, ophthalmic, nasal or genito-urinary use. For some applications, the agents of the present invention are delivered systemically (such as orally, buccally, sublingually), more preferably orally. Hence, preferably the agent is in a form that is suitable for oral delivery.

10

If the compound of the present invention is administered parenterally, then examples of such administration include one or more of: intravenously, intraarterially, intraperitoneally, intrathecally, intraventricularly, intraurethrally, intrasternally, intracranially, intramuscularly or subcutaneously administering the agent; and/or by using infusion techniques.

For parenteral administration, the compound is best used in the form of a sterile aqueous solution which may contain other substances, for example, enough salts or glucose to make the solution isotonic with blood. The aqueous solutions should be suitably buffered (preferably to a pH of from 3 to 9), if necessary. The preparation of suitable parenteral formulations under sterile conditions is readily accomplished by standard pharmaceutical techniques well-known to those skilled in the art.

25 The compounds according to the invention may be formulated for use in human or veterinary medicine by injection (e.g. by intravenous bolus injection or infusion or via intramuscular, subcutaneous or intrathecal routes) and may be presented in unit dose form, in ampoules, or other unit-dose containers, or in multi-dose containers, if necessary with an added preservative. The compositions for injection may be in the form of suspensions, solutions, or emulsions, in oily or aqueous vehicles, and may contain formulatory agents 30 such as suspending, stabilising, solubilising and/or dispersing agents. Alternatively the active ingredient may be in sterile powder form for reconstitution with a suitable vehicle, e.g. sterile, pyrogen-free water, before use.

The compounds of the invention can be administered (e. g. orally or topically) in the form of tablets, capsules, ovules, elixirs, solutions or suspensions, which may contain flavouring or colouring agents, for immediate-, delayed-, modified-, sustained-, pulsed- or controlled-release applications.

5

The compounds of the invention may also be presented for human or veterinary use in a form suitable for oral or buccal administration, for example in the form of solutions, gels, syrups, mouth washes or suspensions, or a dry powder for constitution with water or other suitable vehicle before use, optionally with flavouring and colouring agents. Solid compositions such as tablets, capsules, lozenges, pastilles, pills, boluses, powder, pastes, granules, bullets or premix preparations may also be used. Solid and liquid compositions for oral use may be prepared according to methods well known in the art. Such compositions may also contain one or more pharmaceutically acceptable carriers and excipients which may be in solid or liquid form.

10

The tablets may contain excipients such as microcrystalline cellulose, lactose, sodium citrate, calcium carbonate, dibasic calcium phosphate and glycine, disintegrants such as starch (preferably corn, potato or tapioca starch), sodium starch glycollate, croscarmellose sodium and certain complex silicates, and granulation binders such as polyvinylpyrrolidone, hydroxypropylmethylcellulose (HPMC), hydroxypropylcellulose (HPC), sucrose, gelatin and acacia.

Additionally, lubricating agents such as magnesium stearate, stearic acid, glyceryl behenate and talc may be included.

15

Solid compositions of a similar type may also be employed as fillers in gelatin capsules. Preferred excipients in this regard include lactose, starch, a cellulose, milk sugar or high molecular weight polyethylene glycols. For aqueous suspensions and/or elixirs, the agent may be combined with various sweetening or flavouring agents, colouring matter or dyes, with emulsifying and/or suspending agents and with diluents such as water, ethanol, propylene glycol and glycerin, and combinations thereof.

The compounds of the invention may also be administered orally in veterinary medicine in the form of a liquid drench such as a solution, suspension or dispersion of the active ingredient together with a pharmaceutically acceptable carrier or excipient.

5 The compounds of the invention may also, for example, be formulated as suppositories e.g. containing conventional suppository bases for use in human or veterinary medicine or as pessaries e.g. containing conventional pessary bases.

10 The compounds according to the invention may be formulated for topical administration, for use in human and veterinary medicine, in the form of ointments, creams, gels, hydrogels, lotions, solutions, shampoos, powders (including spray or dusting powders), pessaries, tampons, sprays, dips, aerosols, drops (e.g. eye ear or nose drops) or pour-ons.

15 For application topically to the skin, the agent of the present invention can be formulated as a suitable ointment containing the active compound suspended or dissolved in, for example, a mixture with one or more of the following: mineral oil, liquid petrolatum, white petrolatum, propylene glycol, polyoxyethylene polyoxypropylene compound, emulsifying wax and water.

20 Alternatively, it can be formulated as a suitable lotion or cream, suspended or dissolved in, for example, a mixture of one or more of the following: mineral oil, sorbitan monostearate, a polyethylene glycol, liquid paraffin, polysorbate 60, cetyl esters wax, cetearyl alcohol, 2-octyldodecanol, benzyl alcohol and water.

25 The compounds may also be dermally or transdermally administered, for example, by use of a skin patch.

30 For ophthalmic use, the compounds can be formulated as micronised suspensions in isotonic, pH adjusted, sterile saline, or, preferably, as solutions in isotonic, pH adjusted, sterile saline, optionally in combination with a preservative such as a benzylalkonium chloride. Alternatively, they may be formulated in an ointment such as petrolatum.

As indicated, the compound of the present invention can be administered intranasally or by inhalation and is conveniently delivered in the form of a dry powder inhaler or an aerosol

spray presentation from a pressurised container, pump, spray or nebuliser with the use of a suitable propellant, e.g. dichlorodifluoromethane, trichlorofluoromethane, dichlorotetrafluoroethane, a hydrofluoroalkane such as 1,1,1,2-tetrafluoroethane (HFA 134AT<sup>™</sup>) or 1,1,1,2,3,3,3-heptafluoropropane (HFA 227EA), carbon dioxide or other

5 suitable gas. In the case of a pressurised aerosol, the dosage unit may be determined by providing a valve to deliver a metered amount. The pressurised container, pump, spray or nebuliser may contain a solution or suspension of the active compound, e. g. using a mixture of ethanol and the propellant as the solvent, which may additionally contain a lubricant, e. g. sorbitan trioleate.

10

Capsules and cartridges (made, for example, from gelatin) for use in an inhaler or insufflator may be formulated to contain a powder mix of the compound and a suitable powder base such as lactose or starch.

15 For topical administration by inhalation the compounds according to the invention may be delivered for use in human or veterinary medicine via a nebuliser.

The compounds of the invention may also be used in combination with other therapeutic agents. The invention thus provides, in a further aspect, a combination comprising a 20 compound of the invention or a pharmaceutically acceptable derivative thereof together with a further therapeutic agent.

When a compound of the invention or a pharmaceutically acceptable derivative thereof is used in combination with a second therapeutic agent active against the same disease state 25 the dose of each compound may differ from that when the compound is used alone.

Appropriate doses will be readily appreciated by those skilled in the art. It will be appreciated that the amount of a compound of the invention required for use in treatment will vary with the nature of the condition being treated and the age and the condition of the patient and will be ultimately at the discretion of the attendant physician or veterinarian.

30 The compounds of the present invention may for example be used for topical administration with other active ingredients such as corticosteroids or antifungals as appropriate.

The combinations referred to above may conveniently be presented for use in the form of a pharmaceutical formulation and thus pharmaceutical formulations comprising a

combination as defined above together with a pharmaceutically acceptable carrier or excipient comprise a further aspect of the invention. The individual components of such combinations may be administered either sequentially or simultaneously in separate or combined pharmaceutical formulations by any convenient route.

5

When administration is sequential, either the compound of the invention or the second therapeutic agent may be administered first. When administration is simultaneous, the combination may be administered either in the same or different pharmaceutical composition.

10

When combined in the same formulation it will be appreciated that the two compounds must be stable and compatible with each other and the other components of the formulation. When formulated separately they may be provided in any convenient formulation, conveniently in such manner as are known for such compounds in the art.

15

The compositions may contain from 0.01-99% of the active material. For topical administration, for example, the composition will generally contain from 0.01-10%, more preferably 0.01-1% of the active material.

20

Typically, a physician will determine the actual dosage which will be most suitable for an individual subject. The specific dose level and frequency of dosage for any particular individual may be varied and will depend upon a variety of factors including the activity of the specific compound employed, the metabolic stability and length of action of that compound, the age, body weight, general health, sex, diet, mode and time of administration, 25 rate of excretion, drug combination, the severity of the particular condition, and the individual undergoing therapy.

For oral and parenteral administration to humans, the daily dosage level of the agent may be in single or divided doses.

30

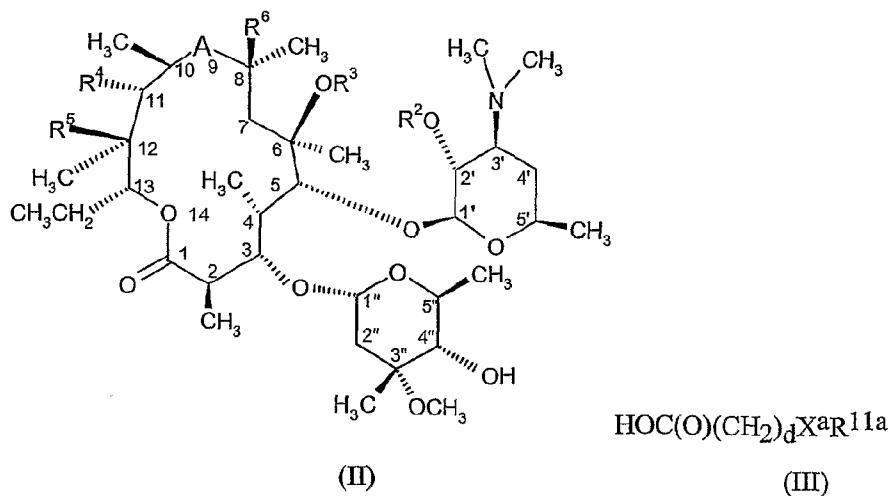

For systemic administration the daily dose as employed for adult human treatment it will range from 2-100mg/kg body weight, preferably 5-60mg/kg body weight, which may be administered in 1 to 4 daily doses, for example, depending on the route of administration and the condition of the patient. When the composition comprises dosage units, each unit will

preferably contain 200mg to 1g of active ingredient. The duration of treatment will be dictated by the rate of response rather than by arbitrary numbers of days.

Compounds of general formula (I) and salts thereof may be prepared by the general methods outlined hereinafter, said methods constituting a further aspect of the invention. In the following description, the groups R<sup>1</sup> to R<sup>33</sup>, A, B, D, E, X, Y, U, W, a, b, d, e, f, g, h, i, j, k, m, n, p, q, r, s, t, v and z have the meaning defined for the compounds of formula (I) unless otherwise stated.

10 The group X<sup>a</sup>R<sup>11a</sup> is XR<sup>11</sup> as defined for formula (I) or a group convertible to XR<sup>11</sup>. Conversion of a group X<sup>a</sup>R<sup>11a</sup> to a XR<sup>11</sup> group typically arises if a protecting group is needed during the reactions described below. A comprehensive discussion of the ways in which such groups may be protected and methods for cleaving the resulting protected derivatives is given by for example T.W. Greene and P.G.M Wuts in Protective Groups in 15 Organic Synthesis 2<sup>nd</sup> ed., John Wiley & Son, Inc 1991 and by P.J. Kocienski in Protecting Groups, Georg Thieme Verlag 1994 which are incorporated herein by reference. Examples of suitable amino protecting groups include acyl type protecting groups (e.g. formyl, trifluoroacetyl and acetyl), aromatic urethane type protecting groups (e.g. benzyloxycarbonyl (Cbz) and substituted Cbz, and 9-fluorenylmethoxycarbonyl (Fmoc)), aliphatic urethane 20 protecting groups (e.g. t-butyloxycarbonyl (Boc), isopropylloxycarbonyl and cyclohexyloxycarbonyl) and alkyl type protecting groups (e.g. benzyl, trityl and chlorotriyl). Examples of suitable oxygen protecting groups may include for example alkyl silyl groups, such as trimethylsilyl or tert-butyldimethylsilyl; alkyl ethers such as tetrahydropyranyl or tert-butyl; or esters such as acetate. Hydroxy groups may be protected by reaction of for 25 example acetic anhydride, benzoic anhydride or a trialkylsilyl chloride in an aprotic solvent. Examples of aprotic solvents are dichloromethane, N,N-dimethylformamide, dimethylsulfoxide, tetrahydrofuran and the like.

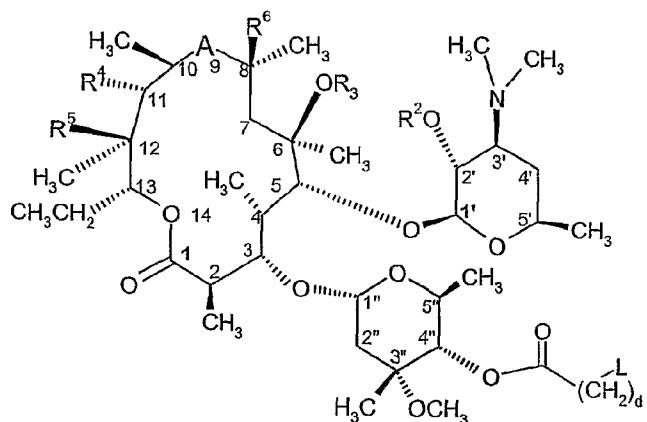

Compounds of formula (I) wherein d is an integer from 1 to 5, may be prepared by reaction of 30 a 4'' hydroxy compound of formula (II) wherein R<sup>2</sup> is a hydroxy protecting group with a suitable activated and protected derivative of the carboxylic acid (III), followed where necessary by subsequent removal of the hydroxyl protecting group R<sup>2</sup> and conversion of the X<sup>a</sup>R<sup>11a</sup> group to XR<sup>11</sup>.

5 Suitable activated derivatives of the carboxyl group include the corresponding acyl halide, mixed anhydride or activated ester such as a thioester. The reaction is preferably carried out in a suitable aprotic solvent such as a halohydrocarbon (e.g. dichloromethane) or N,N-dimethylformamide optionally in the presence of a tertiary organic base such as dimethylaminopyridine or triethylamine or in the presence of inorganic base (eg sodium hydroxide) and at a temperature within the range of 0° to 120°C. The compounds of formula (II) and (III) may also be reacted in the presence of a carbodiimide such as dicyclohexylcarbodiimide (DCC).

10

15 In a further embodiment of the invention, compounds of formula (I) wherein d is an integer from 1 to 5 and U is  $-N(R^{30})-$ , may be prepared by reaction of compounds of formula (V).

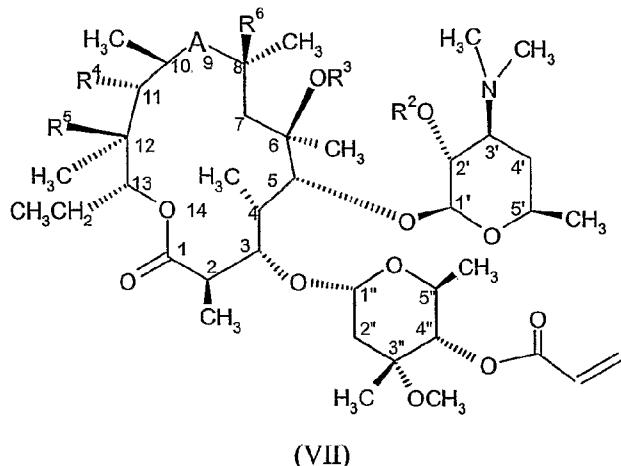

## (V)

wherein d is an integer from 1 to 5 and L is a suitable leaving group, with  $X^aR^{11a}$  (IV) in which U is  $-N(R^{30})-$ . The reaction is preferably carried out in a solvent such as a halohydrocarbon (e.g. dichloromethane), an ether (e.g. tetrahydrofuran or dimethoxyethane), acetonitrile or ethyl acetate and the like, dimethylsulfoxide, N,N-dimethylformamide or 1-methyl-pyrrolidone and in the presence of a base, followed, if desired, by removal of the hydroxyl protecting group  $R^2$  and conversion of the  $X^aR^{11a}$  group to  $XR^{11}$ . Examples of the bases which may be used include organic bases such as diisopropylethylamine, triethylamine and 1,8-diazabicyclo[5.4.0]undec-7-ene, and inorganic bases such as potassium hydroxide, cesium hydroxide, tetraalkylammonium hydroxide, sodium hydride, potassium hydride and the like. Suitable leaving groups for this reaction include halides (e.g. chloride, bromide or iodide) and sulfonyloxy groups (e.g. tosyloxy or methanesulfonyloxy).

15 Compounds of formula (V) may be prepared by reaction of a compound of formula (II), wherein  $R^2$  is a hydroxyl protecting group, with a suitable activated derivative of the carboxylic acid  $HOC(O)(CH_2)_dL$  (VI), wherein L is a suitable leaving group as above defined. Suitable activated derivatives of the carboxyl group are those defined above for carboxylic acid (III). The reaction is carried out using the conditions described above for the reaction of a compound of formula (II) with carboxylic acid (III).

20

In a preferred embodiment of the invention, compounds of formula (I) wherein d is 2 and U is  $-N(R^{30})-$ , may be prepared by Michael reaction of a compound of formula (VII) wherein  $R^2$  is optionally a hydroxy protecting group

with a compound of formula  $X^aR^{11a}$  (IV). The reaction is suitably carried out in a solvent such as dimethylsulfoxide,  $N,N$ -dimethylformamide, 1-methyl-pyrrolidone, a halohydrocarbon (e.g. dichloromethane), an ether (e.g. tetrahydrofuran or dimethoxyethane), acetonitrile or alcohol (e.g methanol or isopropanol) and the like, and in the presence of a base, followed, if desired, by removal of hydroxyl protecting group  $R^2$  and conversion of the  $X^aR^{11a}$  group to  $XR^{11}$ .

10

Compound of formula  $R^{11a}L$  (VIII), wherein L is a suitable leaving group such as chlorine, fluorine or bromine, and  $R^{31}$  and  $R^{19}$  are linked to form the bivalent radical  $-O(CH_2)_2-$ ,  $(CH_2)_t-$ ,  $-NR^7(CH_2)_a-$ ,  $-OCH_2NR^7-$ ,  $-SCH_2NR^7-$ ,  $-CH_2NR^7CH_2-$ ,  $-CH_2OCH_2-$ ,  $-CH_2SCH_2-$  or  $-(CH_2)_aNR^7-$  are known compounds or they may be prepared by analogous methods to those known in the art. Thus, they can be prepared according to the procedures described in US 2002/0025959 A1.

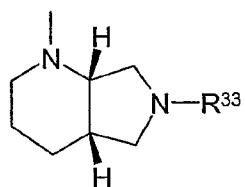

15

Compounds of formula (III) wherein X is  $-U(CH_2)_vB(CH_2)_vD-$ ,  $-U(CH_2)_vB-R^{33}-$ , or X is a group selected from:

20

and

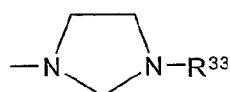

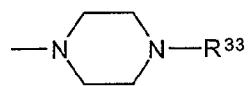

may be prepared by reaction of  $X^aR^{11a}$  (V), wherein X has the meaning defined above with  $R^{34}OC(O)CH=CH_2$  (VII) wherein  $R^{34}$  is carboxyl protecting group, followed by removal of  $R^{34}$ . Suitable  $R^{34}$  carboxyl protecting group include t-butyl, allyl or benzyl.

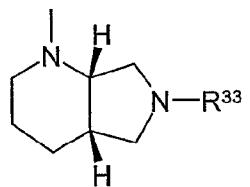

5

Compounds of formula (III) may also be prepared by reaction of  $X^aR^{11a}$  (V) with acrylonitrile followed by hydrolysis of the nitrile to the acid.

Compounds of formula (IV) wherein X is  $-U(CH_2)_vB(CH_2)_vD-$  in which D is  $-N(R^{30})-$ ,  $-O-$  10 or  $-S-$ , or wherein X is  $-U(CH_2)_vB(CH_2)_vD(CH_2)_vE-$  in which E is  $-N(R^{30})-$ ,  $-O-$  or  $-S-$  or X is a group selected from:

and

15

may be prepared by reaction of a compound of formula  $R^{11a}L$  (VIII), wherein L is a suitable leaving group such as chlorine, fluorine or bromine, with a compound of formula  $-U(CH_2)_vB(CH_2)_vD-$  (IX) in which D is  $-N(R^{30})-$ ,  $-O-$  or  $-S-$ , or with compound of formula  $-U(CH_2)_vB(CH_2)_vD(CH_2)_vE-$  (X) in which E is  $-N(R^{30})-$ ,  $-O-$  or  $-S-$  or with piperazine or 20 with imidazolidin or with 1H-octahydro-pyrrolo[3,4-*b*]pyridine.

Compound of formula  $R^{11a}L$  (VIII), wherein L is a suitable leaving group such as chlorine, fluorine or bromine, and  $R^{32}$  and  $R^{19}$  are linked to form the bivalent radical selected from

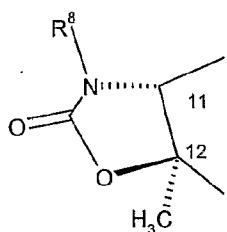

the group  $-\text{S}(\text{CH}_2)_b-$ ,  $-\text{N}(\text{R}^7)(\text{CH}_2)_b-$  or  $-\text{O}(\text{CH}_2)_b-$  are known compounds or they may be prepared by analogous methods to those known in the art. Thus, they can be prepared according to the procedures described in Arch. Pharm. Pharm. Med. Chem. 330, 63 (1997).

5 Compounds of formula (I) may be converted into other compounds of formula (I). Thus compounds of formula (I) wherein B is  $-\text{S}(\text{O})_z-$  and z is 1 or 2 may be prepared by oxidation of the corresponding compound of formula (I) wherein z is 0. The oxidation is preferably carried out using a peracid, e.g. peroxybenzoic acid, followed by treatment with a phosphine, such as triphenylphosphine. The reaction is suitably carried out in an organic solvent such as 10 methylene chloride. Compounds of formula (I) wherein U or B is  $-\text{N}(\text{R}^{30})-$  and  $\text{R}^{30}$  is  $\text{C}_1\text{-4alkyl}$  can be prepared from compounds wherein  $\text{R}^{30}$  is hydrogen by reductive alkylation.

Compounds of formula (II) wherein A is  $-\text{C}(\text{O})\text{NH}-$  or  $-\text{NHC}(\text{O})-$ ,  $\text{R}^4$  or  $\text{R}^5$  are hydroxy,  $\text{R}^3$  is hydrogen and  $\text{R}^6$  is hydrogen are known compounds or they may be prepared by analogous 15 methods to those known in the art. Thus they can be prepared according to the procedures described in EP 507595 and EP 503932.

Compounds of formula (II), wherein A is  $-\text{C}(\text{O})\text{NH}-$  or  $-\text{NHC}(\text{O})-$ ,  $\text{R}^4$  or  $\text{R}^5$  are hydroxy and 20  $\text{R}^3$  is  $\text{C}_1\text{-4alkyl}$  or  $\text{C}_3\text{-6alkenyl}$  optionally substituted by 9 to 10 membered fused bicyclic heteroaryl and  $\text{R}^6$  is hydrogen are known compounds or they may be prepared by analogous methods to those known in the art. Thus they can be prepared according to the procedures described in WO 9951616 and WO 0063223.

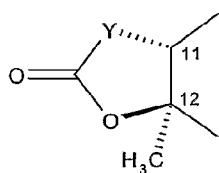

Compounds of formula (II), wherein A is  $-\text{C}(\text{O})\text{NH}-$ ,  $\text{R}^4$  and  $\text{R}^5$  taken together with the 25 intervening atoms form a cyclic group having the following structure:

$R^3$  is  $C_{1-4}$ alkyl, or  $C_{3-6}$ alkenyl optionally substituted by 9 to 10 membered fused bicyclic heteroaryl and  $R^6$  is hydrogen are known compounds or they may be prepared by analogous methods to those known in the art. Thus they can be prepared according to the procedures described in US 6262030.

5

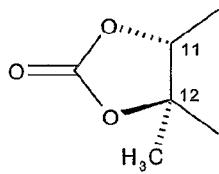

Compounds of formula (II), wherein A is  $-C(O)-$ ,  $-C(O)NH-$ ,  $-NHC(O)-$ ,  $-N(R^7)-CH_2-$ ,  $-CH_2-N(R^7)-$  or  $-CH(NR^8R^9)-$ ,  $R^4$  or  $R^5$  are hydroxy or  $R^4$  and  $R^5$  taken together with the intervening atoms form a cyclic group having the following structure:

10 wherein Y is a bivalent radical selected from  $-O-$  and  $-N(R^{13})-$ , and  $R^3$  is  $C_{1-4}$ alkyl, or  $C_{3-6}$ alkenyl optionally substituted by 9 to 10 membered fused bicyclic heteroaryl are known compounds or they may be prepared by analogous methods to those known in the art. Thus they can be prepared according to the procedures described in EP 307177, EP 248279, WO 0078773, WO 9742204.

a) 3-(2,4-Dichlorophenyl)-3-oxo-propionic acid ethyl ester

Synthesis of **Intermediate 1a** was done by standard procedure starting from 2,4-dichloroacetophenone, diethylcarbonate (25 eq) and NaH (2 eq) at 80°C for 60 minutes.

MS (ES+) m/z:  $[\text{MH}]^+ = 262$

## 10 b) 2-[Bis(methylthio)methylene]-3-(2,4-dichlorophenyl)-3-oxo-propionic acid ethyl ester

To a mixture of **Intermediate 1a** (15,7 g) and  $\text{Cs}_2\text{CO}_3$  (2.5 eq) in THF (230 mL) was added  $\text{CS}_2$  (4.6 eq) with stirring at -10°C. After 5 minutes  $\text{CH}_3\text{I}$  (2.5 eq) was added in one portion and reaction was stirred at room temperature overnight. The reaction was diluted with ether (50 mL) and filtered. Filtrate was concentrated in vacuo.

## d) 7-Chloro-1,2,3,6-tetrahydro-6-oxo-[1,3]oxazino[3,2a]quinoline-5-carboxylic acid

To a solution of **Intermediate 1c** (1.4 g) in THF (15 mL) solution of NaOH (4.6 eq) in water (15 mL) was added and the reaction mixture was stirred at 80°C overnight. THF was evaporated, HCl (0.6 M) was added to reach pH value about 4 and extracted with 3x10 mL of DCM. The organic layers were washed with brine, dried over  $\text{Na}_2\text{SO}_4$ , filtered and DCM was evaporated under reduced pressure affording the title compound (1.16 g).

**Intermediate 2**

**1-Cyclopropyl-6-fluoro-7-chloro-4-oxo-1,4-dihydro-quinoline-3-(2-nitroacetyl)**

25

A mixture of 7-chloro-1-cyclopropyl-6-fluoro-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid (1 g, 3,55 mmol) and of 1,1-carbonyldiimidazole (2,88 g, 17,75 mmol) in 15 ml CCl<sub>4</sub> was heated to reflux over the night. the mixture was cooled and the solvent was removed under reduced pressure. To the residue a small amount of diethyl ether was added and the resulting

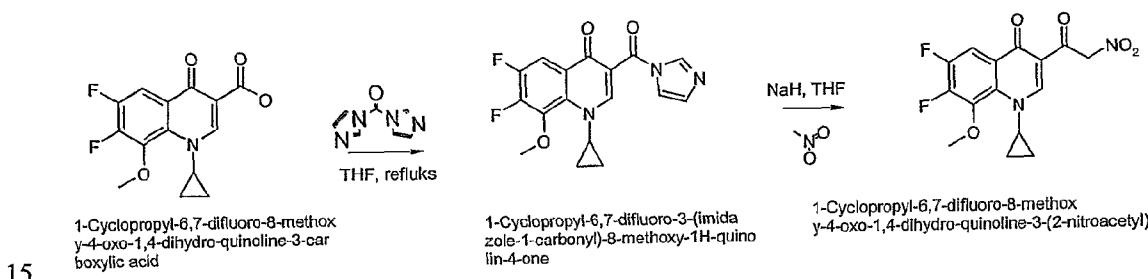

solid was collected by filtration and washed with diethyl ether to give a imidazolide intermediate in a quantitative yield.

To the mixture of NaH (0,26 g, 0,0108 mol, 60 % disperse oil) and of nitromethane (0,58 ml, 0,0108 mol) in 20 ml of anhydrous THF a solution of imidazolide intermediate (0,9 g, 0,289 mmol) in 20 ml of anhydrous THF was added dropwise and heated to reflux for 18 h. The mixture was cooled and 20 ml of H<sub>2</sub>O was slowly added and neutralized by HCl, and then extracted with CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was washed with H<sub>2</sub>O and brine, dried by anhydrous Na<sub>2</sub>SO<sub>4</sub> and evaporated. The product was precipitated and filtrated off yielding 0,4g of title compound. (90,6 % pure compound according to LC-MS).

#### 1-Cyclopropyl-6,7-difluoro-8-methoxy-4-oxo-1,4-dihydro-quinoline-3-(2-nitroacetyl)

A mixture of 1-cyclopropyl-6,7-difluoro-8-methoxy-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid (1 g, 3,38 mmol) and 1,1-carbonyldiimidazole (2,19 g, 13,54 mmol) in 15 ml CCl<sub>4</sub> was heated to reflux over the night. The mixture was cooled and the solvent was removed under reduced pressure. To the residue a small amount of diethyl ether was added and the resulting solid was collected by filtration and washed with diethyl ether to give a imidazolide intermediate in a quantitative yield.

To the mixture of NaH (0,28 g, 0,0116 mmol, 60 % disperse oil) and nitromethane (0,62 ml, 0,01158 mol) in 20 ml of anhydrous THF a solution of imidazolide intermediate (1 g, 2,89 mmol) in 20 ml of anhydrous THF was added dropwise and heated to reflux for 18 h. The mixture was cooled and 20 ml of H<sub>2</sub>O was slowly added and neutralized by HCl, and then extracted with CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was washed with H<sub>2</sub>O and brine, dried by anhydrous Na<sub>2</sub>SO<sub>4</sub> and evaporated. The product was precipitated and filtrated off yielding 0,56g of title product. (93,46 % pure compound according to LC-MS).

15 A mixture of 1-cyclopropyl-6-fluoro-7-chloro-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid (2 g, 0.0071 mol) and 1,1'-carbonyldiimidazole (5.76 g, 0.035 mol) in 15 mL  $\text{CHCl}_3$  was heated to reflux for 17 hours. The solvent was removed by reduced pressure. To the residue ether was added and then stirred at room temperature for 30 min. The solid was filtered and dried affording 1.64 g of 3-imidazolide derivative. Imidazolide derivative (1 g, 0.003 mol) was dissolved in 40 mL acetonitrile, then methanesulphonylacetone (2 g, 0.015 mol) and  $\text{K}_2\text{CO}_3$  were added and the mixture was heated to reflux for 21 hours. The solvent was removed under reduced pressure and 120 mL of  $\text{H}_2\text{O}$  was added. The solution was acidified by 2N HCl (pH ~ 3) and extracted with EtOAc. The organic layer was dried and concentrated to give a crude solid product. The crude product was purified by column chromatography (DCM-EtOH-NH<sub>4</sub>OH = 90:9:1.5) to give pure product 1-cyclopropyl-6-fluoro-7-chloro-4-oxo-1,4-dihydro-3-[(2-methanesulfonyl)acetyl]-quinoline.

6-[3-(2-Amino-ethoxy)-prop-1-ynyl]-1-ethyl-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid trifluoroacetate salt

a) (2-Hydroxy-ethyl)-carbamic acid tert-butyl ester

To a stirring solution of ethanolamine (1.96 mL, 32.7 mmol) in dioxane (40 mL) and water (20 mL) saturated solution of  $\text{NaHCO}_3$  (20 mL) was added. The solution was cooled in ice bath and di-*t*-butyl dicarbonate (8.0 g) was added portionwise. After 1 hour TLC showed no starting material. EtOAc (50 mL) and water (20 mL) were added, organic layer was separated and evaporated yielding 4.20 g of the oily title compound.

b) (2-Prop-2-ynyoxy-ethyl)-carbamic acid tert-butyl ester

15 To a stirring solution of **Intermediate 9a** (1.16 g) in THF (30 mL) at room temperature *t*-butylammonium iodide (0.15 g), sodium iodide (0.15 g) and propargyl bromide (80 % in toluene, 1.20 mL) were added. KOH (0.40 g) was added portionwise during 30 minutes and the suspension was stirred at room temperature for 24 hours. The solvent was evaporated, EtOAc (30 mL) and water (30 mL) were added, organic layer was washed with 10 % 20  $\text{Na}_2\text{S}_2\text{O}_5$  solution and evaporated yielding 1.21 g of the title compound.

c) 6-[3-(2-tert-Butoxycarbonylamino-ethoxy)-prop-1-ynyl]-1-ethyl-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid

25 CuI (55 mg) and triethylamine (14.06 mL) were added into a solution of 1-ethyl-6-iodo-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid (1.0 g) in MeCN (20 mL). The mixture has been stirring at room temperature for 20 minutes.  $\text{Pd}(\text{PPh}_3)_2\text{Cl}_2$  (61 mg) and **Intermediate 9b**

(0.70 g) were added and the mixture has been stirring at 50 °C for 4 hours. The solvents were evaporated, EtOAc (30 mL) and water (30 mL) were added, organic layer was washed with water (30 mL) and brine (30 mL) and evaporated yielding 1.0 g of the title compound.

**6-[2-(2-Carboxy-ethoxy)-ethoxy]-ethoxy]-7-chloro-1-cyclopropyl-4-oxo-1,4-dihydro-quinolone-3-carboxylic acid**

5

Mixture of 50 mL diethylene glycole and 50 mL DMSO was prepared and heated on 70°C.

Into mixture 8 g of KO-t-Bu portionwise was added. Then, 5 g of fluoro-chloro quinolonic acid (17.8 mmol) was added portionwise. The temperature was increased to 105°C. After 5 hours, the 25 mL of H<sub>2</sub>O was added and the mixture was extracted with 2x20 mL of DCM.

10 Water layer was adjusted to pH 4. The obtained precipitate was filtered off and dried under reduced pressure affording 500 mg of 7-chloro-1-cyclopropyl-6-[2-(2-hydroxy-ethoxy)-ethoxy]-4-oxo-1,4-dihydro-quinolone-3-carboxylic acid.

7-Chloro-1-cyclopropyl-6-[2-(2-hydroxy-ethoxy)-ethoxy]-4-oxo-1,4-dihydro-quinolone-3-carboxylic acid (500 mg) was dissolved in 12,5 mL of acrylonitrile, then 1 mL of DBU was

15 added and the mixture stirred for 24 hours at 80°C. Acrylonitrile was evaporated under reduced pressure, residue was dissolved in 300 mL of 2-propanol and the pH of the mixture was adjusted to pH 3.5. The precipitate was obtained after 12 hours, filtered off and washed with water (pH 3.5). The precipitate was dissolved in 20 mL H<sub>2</sub>O:H<sub>2</sub>SO<sub>4</sub> (1:1) and stirred for 24 hours at room temperature. The obtained precipitate was filtered off and dried under reduced pressure affording 300 mg of the title compound.

**20 a) 10-Nitro-1-Oxo-6,7-dihydro-1H,5H-pyrido[3,2,1-ij]quinoline-2-carboxylic acid ethyl ester**

1-Oxo-6,7-dihydro-1H,5H-pyrido[3,2,1-ij]quinoline-2-carboxylic acid ethyl ester (1.0 g) was placed in round bottom flask and to that, mixture of H<sub>2</sub>SO<sub>4</sub> / HNO<sub>3</sub> (1:1) was added and

**25** stirred for 3 hours at 0°C. The reaction mixture was poured on ice and precipitate was filtered off affording 900 mg of title product (LC/MS : 95%).

b) **10-Amino-1-Oxo-6,7-dihydro-1H,5H-pyrido[3,2,1-ij]quinoline-2-carboxylic acid ethyl ester**

5 **Intermediate 16a** (900 mg) was diluted in 35 mL of acetic acid and to this mixture 800 mg of 10 %Pd/C was added and stirred for 15 h at room temperature and at 30 Ba. The reaction mixture was filtered to remove catalyst and then acetic acid was evaporated under reduced pressure affording 700 mg of the title product. (LC/MS : 95%).

**Intermediate 17**

10 **9-Iodo-1-oxo-6,7-dihydro-1H,5H-pyrido[3,2,1-ij]quinoline-2-carboxylic acid ethyl ester**

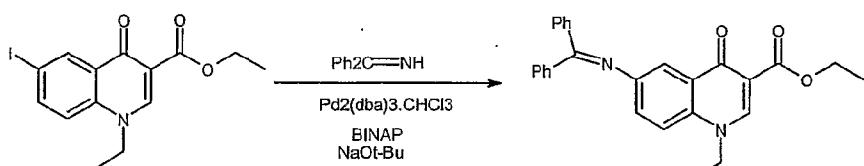

15

To a 0°C cooled trifluoromethansulfonic acid (3 mL, 33.31 mmol) 1-Oxo-6,7-dihydro-1H,5H-pyrido[3,2,1-ij]quinoline-2-carboxylic acid ethyl ester (1.53 g, 5.95 mmol) was added and to that solution N-Iodosuccinimide (1.6 g, 714 mmol) was added. The mixture was allowed to warm from 0 °C to room temperature while stirring. Reaction mixture was poured 20 in ice and precipitate was filtered off affording 1 g of the title product (LC/MS : 57%).

**Intermediate 18**

**6-Amino-1-ethyl-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid ethyl ester**

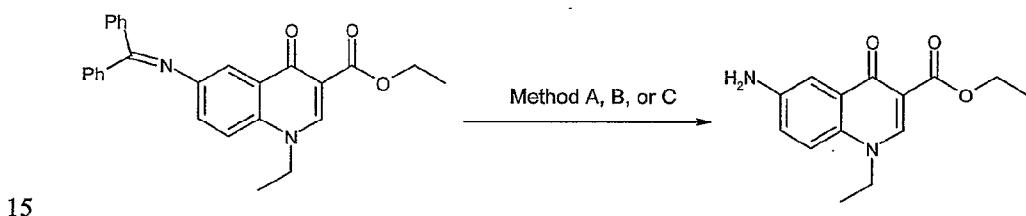

25

**a) 6-(Benzhydrylidene-amino)-1-ethyl-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid ethyl ester**

A Pyrex tube was charged with sodium tert-butoxide (1.4 mmol), Pd<sub>2</sub>(dba)<sub>3</sub> (0.00125 mmol), 5 and BINAP (0.00375 mmol). The Pyrex tube was fitted with a septum and after the air atmosphere was replaced with argon, toluene (4 mL), 1-ethyl-6-iodo-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid ethyl ester (1.0 mmol), and benzophenone imine (1.2 mmol) were added by syringe. The reaction was sealed and heated to 80°C with stirring until starting material was consumed as judged by GC analysis. The reaction mixture was cooled to room 10 temperature, diluted with ether (40 mL), filtered, and concentrated. The crude reaction mixture was then recrystallized from MeOH to furnish the desired product in 90% yield.

**b) 6-Amino-1-ethyl-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid ethyl ester**

**Method A: Transamination with Hydroxylamine**

To a solution of the imine adduct in MeOH (0.1 M) at RT was added NaOAc (2.4 eq) and 20 hydroxylamine hydrochloride (1.8 eq). Oxime formation was usually complete in 15 to 30 minutes. The solution was then partitioned between 0.1 M NaOH and CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was dried over anhydrous Na<sub>2</sub>SO<sub>4</sub> and concentrated in vacuo. The product was purified by chromatography on silica gel.

25 **Method B: Hydrogenolysis**

A solution of the imine adduct, ammonium formate (15eq) and 5% Pd/C (10 mol%) were heated to 60°C in MeOH (0.2 M in imine). After 2 hours reduction was usually complete. The solution was cooled to room temperature and diluted with CH<sub>2</sub>Cl<sub>2</sub> (5x volume of MeOH) to 30 be passed through a plug of celite. The organic solution was washed with 0.1 M NaOH, dried

over anhydrous  $\text{Na}_2\text{SO}_4$  and concentrated in vacuo. The product was purified by chromatography on silica gel.

#### Method C: Acidic Hydrolysis

5

To a solution of the imine adduct in THF (0.3 M) was added aqueous 2.0 M HCl (added 5% by volume of THF). After 5-20 minutes hydrolysis was complete and the reaction mixture was partitioned between 0.5 M HCl and 2:1 hexane/EtOAc. The aqueous layer was separated and made alkaline. The product aniline was extracted with  $\text{CH}_2\text{Cl}_2$ , dried over anhydrous  $\text{Na}_2\text{SO}_4$  and concentrated in vacuo.

15 To a solution of 2'-O-acetyl-6-O-methyl-erythromycin A (1.1 g) in DCM (20 mL) pyridine (1.7 mL) and acryloyl chloride (1.1 mL) were added at 0°C. After 2 hours a further addition of pyridine (1.7 mL) and of acryloyl chloride (1.1 mL) was performed. The reaction mixture was quenched with a saturated solution of  $\text{NH}_4\text{Cl}$  (10 mL) and extracted with DCM (3x20 mL). The organic phase was washed with a saturated solution of  $\text{NaHCO}_3$  (10 mL), water (10 mL), dried over  $\text{Na}_2\text{SO}_4$ , filtered and evaporated under reduced pressure. The crude product was purified by flash-chromatography (DCM-MeOH-NH<sub>3</sub> 95:5:0.5) affording the title compound (470 mg).

20 (5g, 0.018 mol), 2,2'-(ethylenedioxy)bis-(ethylamine) (26 mL, 0.18 mol, 10eq.) in 1-methyl-  
2-pyrrolidone was heated at 110 °C for 24 hours. Reaction mixture was diluted with water  
(70 mL) pH was adjusted to 11 and extracted with CH<sub>2</sub>Cl<sub>2</sub> (9x40 mL). Water layer was then  
acidified to pH 6.8 with H<sub>2</sub>SO<sub>4</sub>, extracted with CH<sub>2</sub>Cl<sub>2</sub> (50 mL) and evaporated. 2-Propanol  
was added (200 mL) and stirred at 82 °C for 30 minutes. The reaction mixture was then  
25 filtered and 2-propanol was evaporated in vacuum yielding 8 g of oily product, according to

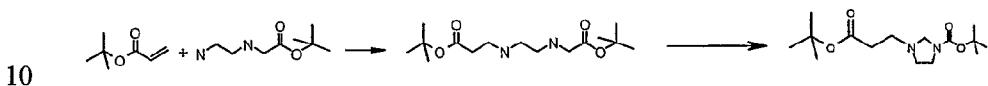

LC-MS 50% of chloro derivative (**A**) and 30% of fluoro derivative. Product was purified by column chromatography (eluent  $\text{CH}_2\text{Cl}_2$ -2-propanol = 1:1) yielding pure chloro derivative (**A**).

a) (2-Benzyl-ethoxy)-acetaldehyde

5 THF (40 ml) was cooled to 0°C under N<sub>2</sub> atmosphere for 30 minutes and in this solution 2-allyloxyethanol (3.14 mL, 29.4 mmol) and NaH (1.1 g, 27.5 mmol) were added. The reaction mixture was heated to 35°C and after 45 minutes, this mixture was cooled to 0°C and benzyl bromide (5.24mL, 44.1 mmol) was added. Reaction mixture was stirred at RT overnight and then extracted with EtOAc/H<sub>2</sub>O. The combined organic layers were dried over anhydrous Na<sub>2</sub>SO<sub>4</sub> and evaporated under vacuum.

10 The crude product was purified via flash chromatography (hexane : acetone = 6 : 1) giving (2-allyloxy-ethoxymethyl)-benzene.

To the solution of (2-allyloxy-ethoxymethyl)-benzene (2 g, 10.4 mmol) in THF : H<sub>2</sub>O = 1 : 1 (50ml), cooled to 0°C, OsO<sub>4</sub> (0.127g; 2.5% solution in THF) and NaIO<sub>4</sub> (12.83 g suspended in 50ml of H<sub>2</sub>O) were added. The reaction mixture was stirred at RT for 3h, filtered and then extracted with EtOAc/H<sub>2</sub>O. The combined organic layers were dried over anhydrous Na<sub>2</sub>SO<sub>4</sub> and evaporated under vacuum giving 2.08 g of the title intermediate.

b) 9-[2-(2-Benzyl-ethoxy)-ethylamino]-1-oxo-6,7-dihydro-1H,5H-pyrido[3,2,1-ij]quinoline-2-carboxylic acid ethyl ester

To the solution of **Intermediate 10c** (400mg, 1.47 mmol) in MeOH (150 mL), **Intermediate 35a** (285 mg, 1.47 mmol), NaBH<sub>3</sub>CN (273mg, 2.2mmol) and AcOH (300μL) were added. 20 **4''-O-(3-[2-(3-Carboxy-7-chloro-1-cyclopropyl-4-oxo-1,4-dihydro-quinolin-6-ylamino)-ethoxy]-ethoxy)-propionyl-roxythromycin**

Intermediate 7 (2.51 g, 5.7 mmol) was dissolved in 10 mL of DMF/4Å, and cooled to 0°C under N<sub>2</sub> atmosphere. In this solution, EDACxHCl (1.1 g, 5.7 mmol) was added and stirred for 5 min. Then, 2'-O-acetyl-roxythromycin (2.5 g, 2.84 mmol) diluted in 10 mL of DCM/4Å, and DMAP (1.1 g, 8.55 mmol) was added and stirred for 24 h. In the reaction mixture 30 mL of EtOAc was added and it was extracted with 3x20 mL of H<sub>2</sub>O. The organic layers were washed with brine and evaporated affording 500 mg g of 2'-O-acetyl protected product which was dissolved in 100 mL MeOH and stirred at 40°C for 24 h. MeOH was evaporated under reduced pressure. The residue was purified by column chromatography in (DCM-MeO-:NH<sub>3</sub> = 90:5:0.5) yielded 250 mg of the title product.

In 4 mL of dry DMF was dissolved 1.5 g of **Intermediate 27** (1 eq) and cooled on ice bath.

10 To the solution was added EDC HCl (1.09 g; 1.5 eq) and the reaction mixture was stirred at 0 °C for 30min under the flow of N<sub>2</sub>. Than was added a solution of 2'-O-acetyl-(9E)-ethoxyimino erythromycin A (2.48 g; 0.8 eq) in 4 mL of DMF and after 1 hour DMAP (2x463 mg; 2 eq). The resulting mixture was stirred over the weekend, during which time the reaction mixture was allowed to worm to ambient temperature. By extraction with water and DCM the layers are separated. The water layer was extracted two times with DCM. Organic layers were collected, dried on Na<sub>2</sub>SO<sub>4</sub>, filtered off and organic solvent evaporated. The foamy residue (260 mg) was dissolved in MeOH (20 mL) and solution was stirred over the night with heating at 60 °C. THE CLAIMS DEFINING THE INVENTION ARE AS FOLLOWS:

1. A compound of formula (I)

5

(I)

wherein

10 A is a bivalent radical selected from  $-\text{C}(\text{O})-$ ,  $-\text{C}(\text{O})\text{NH}-$ ,  $-\text{NHC}(\text{O})-$ ,  $-\text{N}(\text{R}^7)\text{CH}_2-$ ,  
 $-\text{CH}_2\text{N}(\text{R}^7)-$ ,  $-\text{CH}(\text{NR}^8\text{R}^9)-$  and  $-\text{C}(\text{=NR}^{10})-$ ;

15  $\text{R}^1$  is  $-\text{OC}(\text{O})(\text{CH}_2)_d\text{XR}^{11}$ ;

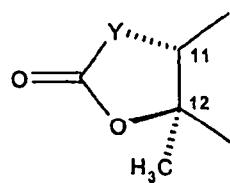

20  $\text{R}^2$  is hydrogen or a hydroxyl protecting group;

25  $\text{R}^3$  is hydrogen,  $\text{C}_{1-4}$ alkyl, or  $\text{C}_{2-6}$ alkenyl optionally substituted by 9 to 10 membered fused  
bicyclic heteroaryl;

30  $\text{R}^4$  is hydroxy,  $\text{C}_{2-6}$ alkenyloxy optionally substituted by 9 to 10 membered fused bicyclic  
heteroaryl, or  $\text{C}_{1-6}$ alkoxy optionally substituted by  $\text{C}_{1-6}$ alkoxy or  $-\text{O}(\text{CH}_2)_e\text{NR}^7\text{R}^{12}$ ,

35  $\text{R}^5$  is hydroxy, or

40  $\text{R}^4$  and  $\text{R}^5$  taken together with the intervening atoms form a cyclic group having the  
45 following structure:

wherein Y is a bivalent radical selected from  $-\text{CH}_2-$ ,  $-\text{CH}(\text{CN})-$ ,  $-\text{O}-$ ,  $-\text{N}(\text{R}^{13})-$  and  $-\text{CH}(\text{SR}^{13})-$ ;

$\text{R}^6$  is hydrogen or fluorine;

$\text{R}^7$  is hydrogen or  $\text{C}_{1-6}\text{alkyl}$ ;

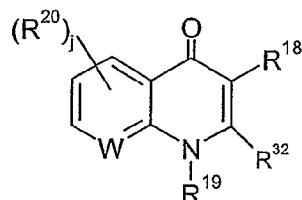

5  $\text{R}^8$  and  $\text{R}^9$  are each independently hydrogen,  $\text{C}_{1-6}\text{alkyl}$ ,  $-\text{C}(\text{=NR}^{10})\text{NR}^{14}\text{R}^{15}$  or  $-\text{C}(\text{O})\text{R}^{14}$ , or

$\text{R}^8$  and  $\text{R}^9$  together form  $=\text{CH}(\text{CR}^{14}\text{R}^{15})\text{faryl}$ ,  $=\text{CH}(\text{CR}^{14}\text{R}^{15})\text{f heterocyclyl}$ ,  $=\text{CR}^{14}\text{R}^{15}$  or  $=\text{C}(\text{R}^{14})\text{C}(\text{O})\text{OR}^{14}$ , wherein the alkyl, aryl and heterocyclyl groups are optionally substituted by up to three groups independently selected from  $\text{R}^{16}$ ;

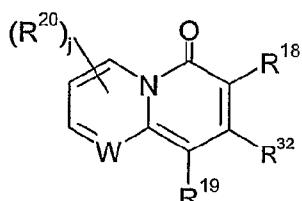

10  $\text{R}^{10}$  is  $-\text{OR}^{17}$ ,  $\text{C}_{1-6}\text{alkyl}$ ,  $-(\text{CH}_2)_g\text{aryl}$ ,  $-(\text{CH}_2)_g\text{heterocyclyl}$  or  $-(\text{CH}_2)_h\text{O}(\text{CH}_2)_i\text{OR}^7$ , wherein each  $\text{R}^{10}$  group is optionally substituted by up to three groups independently selected from  $\text{R}^{16}$ ;

$\text{R}^{11}$  is a heterocyclic group having the following structure:

15

or

20  $\text{R}^{12}$  is hydrogen or  $\text{C}_{1-6}\text{alkyl}$ ;

$\text{R}^{13}$  is hydrogen or  $\text{C}_{1-4}\text{alkyl}$  substituted by a group selected from optionally substituted phenyl, optionally substituted 5 or 6 membered heteroaryl and optionally substituted 9 to 10 membered fused bicyclic heteroaryl;

$R^{14}$  and  $R^{15}$  are each independently hydrogen or  $C_{1-6}$ alkyl;

$R^{16}$  is halogen, cyano, nitro, trifluoromethyl, azido,  $-C(O)R^{21}$ ,  $-C(O)OR^{21}$ ,  $-OC(O)R^{21}$ ,  $-OC(O)OR^{21}$ ,  $-NR^{22}C(O)R^{23}$ ,  $-C(O)NR^{22}R^{23}$ ,  $-NR^{22}R^{23}$ , hydroxy,  $C_{1-6}$ alkyl,  $-S(O)_kC_{1-6}$ alkyl,  $C_{1-6}$ alkoxy,  $-(CH_2)_m$ aryl or  $-(CH_2)_m$ heteroaryl, wherein the alkoxy group is

5 optionally substituted by up to three groups independently selected from  $-NR^{14}R^{15}$ , halogen and  $-OR^{14}$ , and the aryl and heteroaryl groups are optionally substituted by up to five groups independently selected from halogen, cyano, nitro, trifluoromethyl, azido,  $-C(O)R^{24}$ ,  $-C(O)OR^{24}$ ,  $-OC(O)OR^{24}$ ,  $-NR^{25}C(O)R^{26}$ ,  $-C(O)NR^{25}R^{26}$ ,  $-NR^{25}R^{26}$ , hydroxy,  $C_{1-6}$ alkyl and  $C_{1-6}$ alkoxy;

10  $R^{17}$  is hydrogen,  $C_{1-6}$ alkyl,  $C_{3-7}$ cycloalkyl,  $C_{3-6}$ alkenyl or a 5 or 6 membered heterocyclic group, wherein the alkyl, cycloalkyl, alkenyl and heterocyclic groups are optionally substituted by up to three substituents independently selected from optionally substituted 5 or 6 membered heterocyclic group, optionally substituted 5 or 6 membered heteroaryl,  $-OR^{27}$ ,  $-S(O)_nR^{27}$ ,  $-NR^{27}R^{28}$ ,  $-CONR^{27}R^{28}$ , halogen and cyano;

or a pharmaceutically acceptable derivative thereof.

10 14. A process for the preparation of a compound as claimed in claim 1 which comprises:

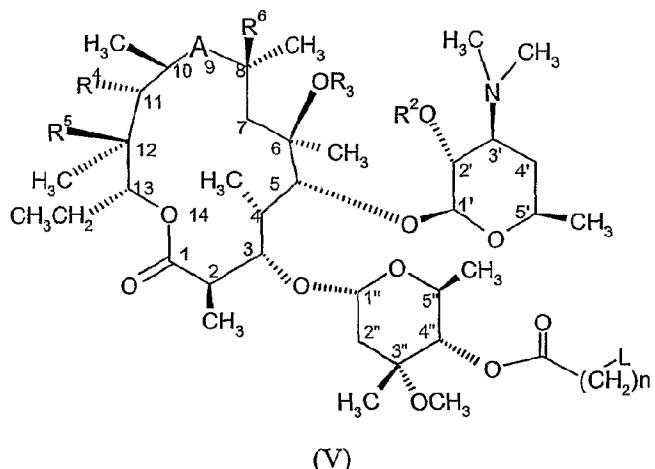

a) reacting a compound of formula (II)

with a suitable activated derivative of the acid (III), wherein  $X^a$  and  $R^{11a}$  are  $X$  and  $R^{11}$  as defined in claim 1 or groups convertible to  $X$  and  $R^{11}$ , to produce a compound of formula (I) wherein  $d$  is an integer from 1 to 5;

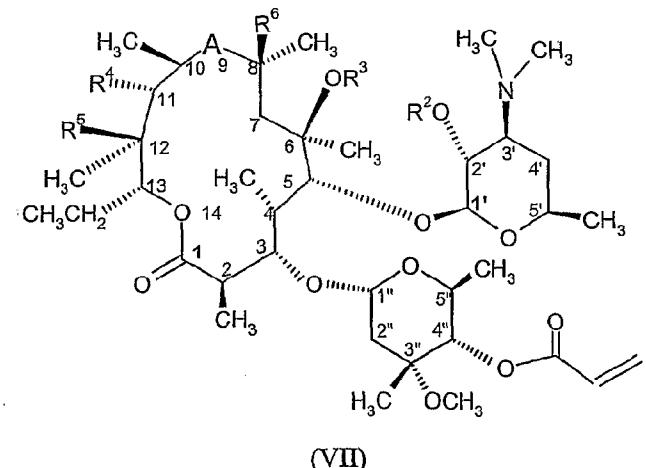

20

b) reacting a compound of formula (V)

with a compound of formula  $X^a R^{11a}$  (IV), wherein  $R^{11a}$  is  $R^{11}$  as defined in claim 1 or a group convertible to  $R^{11}$  and  $X^a$  is  $-U(CH_2)_v B-$  or a group convertible to  $-U(CH_2)_v B-$  in which  $U$  is  $-N(R^{30})-$ , and  $L$  is suitable leaving group, to produce a compound of formula (I) wherein  $U$  is  $-N(R^{30})-$ ; or

10 c) reacting a compound of formula (VII), with a compound of formula  $X^a R^{11a}$  (IV),

wherein  $R^{11a}$  is  $R^{11}$  as defined in claim 1 or a group convertible to  $R^{11}$ , and  $X^a$  is  $-U(CH_2)_v B-$  or a group convertible to  $-U(CH_2)_v B-$  in which  $U$  is  $-N(R^{30})-$ , to produce a

compound of formula (I) wherein d is 2 and U is  $-N(R^{30})-$ , and thereafter, if required, subjecting the resulting compound to one or more of the following operations:

- i) removal of the protecting group  $R^2$ ,
- ii) conversion of  $X^aR^{11a}$  to  $XR^{11}$ ,
- 5 iii) conversion of  $B^aR^{11a}$  to  $BR^{11}$ , and
- iv) conversion of the resultant compound of formula (I) into a pharmaceutically acceptable derivative thereof.

15. A compound according to any one of claims 1 to 13, or a pharmaceutically  
10 acceptable derivative thereof, for use in therapy.

16. Use of a compound according to any one of claims 1 to 13, or a pharmaceutically acceptable derivative thereof, in the manufacture of a medicament for use in the treatment or prophylaxis of systemic or topical microbial infections in a human or animal body.

15  
17. A compound according to any one of claims 1 to 13, or a pharmaceutically acceptable derivative thereof, for use in the treatment or prophylaxis of systemic or topical microbial infections in a human or animal body.

20 18. A method for the treatment of the human or non-human animal body to combat microbial infection comprising administration to a body in need of such treatment of an effective amount of a compound as claimed in any one of claims 1 to 13, or a pharmaceutically acceptable derivative thereof.

25 19. A pharmaceutical composition comprising at least one compound according to any one of claims 1 to 13, or a pharmaceutically acceptable derivative thereof, in association with a pharmaceutically acceptable excipient, diluent and/or carrier.

20. A compound according to any one of claims 1 to 3, wherein the pharmaceutically  
30 acceptable derivative is a salt, solvate or ester.
