Attorney

Patented Feb. 19, 1929. 1,702,827

UNITED STATES PATENT OFFICE.

LUCILLE LESLIE GUSTAVESON, OF TACOMA, WASHINGTON.

TWIN LOUNGE.

Application filed June 28, 1927. Serial No. 202,046.

This invention relates to furniture of the type generally known as sofas or lounges and has for its object to connect a pair of such articles so as to form a unit thereof.

A further object is to provide each of the articles combining to form the unit with separate back or head rests and arranged at opposite relative ends so that occupants reclining upon the lounges will be facing toward each other.

A still further object is to construct an article of this character of neat and attractive appearance, comfortable, and inexpensive to manufacture.

Other objects and advantages reside in the special construction, combination and arrangement of the various elements forming the invention as more fully hereinafter described and claimed, reference being had to the accompanying drawings forming part hereof, wherein:

Figure 1 is a top plan view,

Figure 2 is a side elevational view, and,

Figure 3 is a bottom plan view.

Referring now to the drawing I have disclosed my invention comprising a pair of integrally formed, substantially oval-shaped base sections indicated at 5, and arranged in slightly offset relation as shown in Figures 1 and 3 so that the end of one base section will extend beyond the adjoining end of the opposite section at one end and will be reversedly arranged at the opposite end. The base sections are supported by legs 6 and the upper surface of the base section is provided with pads indicated at 7.

Each of the outwardly extending ends of each section is provided with an upwardly extending back or headrest indicated at 8 and inclined upwardly to form a more comfortable position for supporting an occupant, and terminating in arms indicated at 9 extending partly along each side of each section with the outer arms at each side extending for a greater distance than the inner arm.

In this manner a double lounge is formed comprising separate and individual sections, each being provided with a back or headrest oppositely arranged so that occupants of the respective sections will be in a position facing each other and enabled to freely converse with each other in comfort and without causing a twisting or turning of the head of either when looking in the direction toward each other.

It is obvious that the invention is susceptible to various changes and modifications without departing from the spirit thereof or the scope of the appended claim and I accordingly claim all such forms of the device to which I am entitled.

I claim:

In a double lounge, a relatively flattened elongated base section constructed from a single sheet of rigid material having each end formed with double curved sections, one of the curved sections at each end extending beyond its adjacent section, the upper surface of the base having a sectional pad arranged thereon and forming a cover for the entire base, said pad being tufted longitudinally along a line equidistantly between the sides of the base, end legs for the base depending from each of the curved end sections and a centrally disposed leg intermediate the ends of the base, the upper face at each of the extended ends of the base having a back rest arranged thereon with sides constituting arm rests extending substantially along the sides of the base and terminating at a point substantially midway of the sides thereof.

In testimony whereof I affix my signature.

LUCILLE LESLIE GUSTAVESON.
