The present invention discloses a kind of women's sports trousers having a waistband 3 disposed in its waist part, the lower portion of the waistband 3 is connected with panties 2 made of thinner material and having a size corresponding to the size of the sports trousers, the panties 2 being disposed in the inner side of the trouser legs 1. Because of this assembly configuration of the sports trousers and the panties 2, when people are doing sports, pulling up the sports trousers can pull up the panties 2 at the same time to prevent its down sliding, and the edges of the panties 2 won't be exposed, sporting people can thus concentrate on their games, without worrying about the shape of the panties 2 being laid bare. Because the sports trousers and the connected panties 2 are made of compatible materials with good resilience, even if doing sports of large amplitudes, such as yoga, basketball, tennis or badminton etc., it's unlikely to lay bare, and any embarrassing situation can be avoided.
SPORTS TROUSERS FOR WOMEN

TECHNICAL FIELD

[0001] The present invention relates to a kind of sports trousers for women.

BACKGROUND ART

[0002] Sports people, when wearing ordinary sports trousers, need also to wear underpants or panties. The panties and the sports trousers are easy to slide down or shift about. When people are doing sports, it is easy for them to lift up their down-slip sport trousers. However, it would be considered an unsightly act for them to pull up their down-slip panties in public, and ladies would even lose their sense of security for this.

SUMMARY OF THE INVENTION

[0003] The present invention aims at providing a kind of sports trousers in assembly with panties for women, which can effectively prevent panties from sliding down, shifting about, or being exposed. Sportswomen in such trousers plus panties can hardly lay bare.

[0004] The invention achieves its aim by means of the following technical solutions:

[0005] A kind of women’s sports trousers comprising a waistband having size matched panties connected to the waistband and suspending inside the trouser legs.

[0006] And there is an elastic cord and a cloth strap disposed within the waistband for fastening it.

[0007] The positive effects and beneficial contributions are as follows:

[0008] 1) Because the sports trousers and the panties are assembled together, when people are doing sports, pulling up the sports trousers can pull up the panties at the same time to prevent its down sliding, without worrying about exposing the edges of the panties, sporting people can thus concentrate on their games;

[0009] 2) Because the sports trousers and the panties are made of compatible materials with good resilience, even if doing sports of large amplitude, such as yoga, basketball, or badminton etc., it’s unlikely to lay bare;

[0010] 3) Because the sports trousers in itself and the assembled panties are made using cloth of the same color series, women don’t need to worry that the difference between the color of the sports trousers and that of the panties would expose the shape of the panties, and they don’t need to spend time to choose panties of suitable color and shape, and they can save time for matching the colors of the panties and of the sports trousers before wearing.

DESCRIPTION OF FIGURES

[0011] FIG. 1 is a configuration diagram for a preferred embodiment of the present invention;

[0012] FIG. 2 is a configuration diagram for a preferred embodiment, in a state having the inner side of the sports trousers turned outside, of the present invention.

PREFERRED EMBODIMENTS

[0013] In order to further describe the details of the technical solutions of the present invention, a preferred embodiment is given below in connection with the figures.

[0014] As shown in FIG. 1, a kind of women’s sports trousers has a comparatively wide and thick waistband 3 disposed at its waist part, with panties 2 of the corresponding size to the trousers sewn on the lower edge of waistband 3 and suspending inside the trouser legs 1. And there is an elastic cord and a cloth strap disposed (not shown) within the double layers of waistband 3 for fastening it.

[0015] Said sports trousers and the panties 2 may use resilient cloth of the same texture, with panties 2 having thinner cloth and the sports trousers having thicker cloth, it is more comfortable to wear, and the shape of the edges of the panties is not visible.

[0016] The sports trousers and the panties are made of compatible materials with good resilience, even if doing sports of large amplitude, it’s unlikely to lay bare. Because the sports trousers and the panties have correspondent texture and color, and the panties have thinner cloth, sportswomen don’t need to worry the shape of the panties to be exposed, they don’t need to spend time to choose panties of suitable color and shape, and they can save time for matching the colors of the panties and of the sports trousers before wearing.

[0017] The above description of the preferred embodiment is purposed to promote the understanding of the present invention by those skilled in the art. The technical personnel in the field may make various modifications and changes without going beyond the principle of this invention. For example, the panties’ configuration of the invention can be performed onto sports trousers entity of any types, not limited to the sports trousers of the embodiment. It is supposed to comprehend that the above embodiment is just one of the preferred ones, any modification and alteration of the embodiment will not depart from the protection scope of the present invention.

Labels for the Figures

[0018] 1 Sports trousers legs
[0019] 2 Panties
[0020] 3 Waistband

1. Women’s sports trousers comprising a waistband disposed in its waist part, which is characterized in that the lower portion of the waistband is connected with panties having a size corresponding to the size of the sports trousers, the panties being disposed in the inner side of the trouser legs.

2. The women’s sports trousers as defined in claim 1, characterized in that there is an elastic cord and a cloth strap disposed within double layers of the waistband for fastening the waistband.
