(54) Tray-type shipping and display container.

(57) A combination shipping and display container for packaged products is described as including a substantially open tray with a high back panel 23, a low front panel 20, 21, and substantially open side panels 31-34 connecting the front and back panels. The container includes a pair of integral divider flaps 51, 52 which extend between the back panel and the front panel and have a height which is substantially equal to that of the back panel. A top panel 24 extends forwardly from the upper edge of the back panel to the front of the container and further includes a top panel extension 25 which folds downwardly and includes means 26 for establishing locking engagement with the container. The container is adapted to adequately protect a plurality of packaged products while providing substantial open display area in its front and side panels.
