(54) Title of the Invention: **A swing**
Abstract Title: **A swing**

(57) The present invention provides a seat (100) for a swing comprising a seat member (11, 2) providing a seat surface, two stabilising arm members (22, 24), the stabilising arm members extending upwardly from either side of the seat surface, wherein each stabilising arm member (22, 24) is configured to receive at least partially, in use, a received portion of an elongate swing suspension element, the received portion of the elongate swing suspension element running adjacent the stabilising arm member (22, 10 24) along at least a part of the length of the stabilising arm member (22, 24) such that the stabilising arm member (22, 24) acts to increase the effective rigidity of the received portion of the elongate swing suspension element.
