UNITED STATES PATENT OFFICE.

CHARLES LAUBY, OF BRODHEAD, WISCONSIN.

IMPROVEMENT IN FOUNTAINS AND COOLERS COMBINED.

Specification forming part of Letters Patent No. 122,617, dated January 9, 1872.

SPECIFICATION.

I, CHARLES LAUBY, of Brodhead, in the county of Green and State of Wisconsin, have invented certain Improvements in Cold-Water Fountains and Coolers Combined, of which the following is a specification:

My invention relates to the construction of an apparatus with upper and lower chambers—the one for an ice or cold-water fountain and the other for a cooler with a revolving floor.

Figure 1 is a vertical transverse section, showing the interior of the said apparatus. Fig. 2 is a plan of the floor of the said cooler.

a a is the outer wall of the said apparatus. *b b* is the inner wall of the same, which should be placed about two inches apart in a full-sized machine. *j j* is the space between the said walls. *f* is a lid or cover, which may be removed at pleasure to fill the said chamber with ice or water. *d d* is the lower chamber. *C* is the upper chamber or fountain. *G* is a pipe inserted into the bottom of the said foun-

tain and leading down through the said cooler, and coupled with the horizontal pipe *f*, through which the water may be drawn from the said fountain at pleasure. *ee* is the said floor of the said cooler. *k* is the bottom of the said fountain.

The object of the revolving floor is mainly for the convenience of putting in and taking out of the said cooler the things to be kept therein, and may be easily turned with the hand, or with gearing, or any other device.

The space *j j* is to be filled, as usual, with sawdust or other material.

Claim.

I claim as my invention—

The combination of the said fountain *C*, cooler *d d*, and revolving floor *ee*, substantially as described, and for the purpose set forth.

Witnesses: CHARLES LAUBY.
