A surgical training device and method. The surgical training device can include a portable case including a base and a lid. The surgical training device can include a support coupled to the base, and the support can be moveable from a first position stored within the base to a second position coupled to the lid. The support can include a plurality of ports positioned so that when the support is in the second position, the surgical instruments inserted into the plurality of ports are substantially horizontal and parallel to the base. The surgical training device can include a camera and a video monitor connected to the camera. The video monitor can display an output from the camera including the surgical instruments and/or simulated tissue.
A. **CLASSIFICATION OF SUBJECT MATTER**

**IPC**

G09B 23/28 (2006 01)

USPC 434/262

According to International Patent Classification (IPC) or to both national classification and IPC

B. **FIELDS SEARCHED**

Minimum documentation searched (classification system followed by classification symbols)

U S 434/262

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

C. **DOCUMENTS CONSIDERED TO BE RELEVANT**
