(54) **Title:** DISPLAYING NETWORK OBJECTS IN MOBILE DEVICES BASED ON GEOLOCATION

(57) **Abstract:** Displaying network content searches on mobile devices involves obtaining results (208) of a network content request (202) via a mobile device (200). A geolocation of at least one object (402) associated with the results (208) of the network content request (202) is also obtained. A scene is viewed in a camera view (212) of the mobile device (200). A virtual location is determined in the camera view (212). The virtual location represents the actual location of the object (402) relative to the scene contained in the camera view (212). A graphic (214, 216) representing the object (402) is then displayed at the virtual location in the camera view (212).
