(57) **ABSTRACT**

The present invention is directed to women's clothing apparel including a built-in bra. In preferred embodiments, the straps of the bra are fastened to the shoulder supports of a top garment substantially along the length of the shoulder supports from the front to the back of the garment. The invention also provides novel bras which can be advantageously used according to the invention.

## BRAS, BRA SYSTEMS AND GARMENTS INCORPORATING SAME

### CROSS REFERENCE TO RELATED APPLICATIONS

[0001] The present application is a continuation-in-part application of U.S. Ser. No. 09/727,029 filed Nov. 20, 2000, which is a continuation of U.S. Ser. No. 09/358,274, filed Jul. 21, 1999, now U.S. Pat. No. 6,162,111, which is a continuation-in-part of U.S. Ser. No. 09/345,256, filed Jun. 30, 1999, which claims priority to provisional application U.S. Ser. No. 60/091,374. The entire disclosure of each application is incorporated herein by reference.

### FIELD OF THE INVENTION

[0002] The present invention is directed to women's clothing apparel, particularly garments which cover a woman's breasts. Specifically, the invention provides for fixing at least a portion of a bra to the garment under which the bra is worn.

### BACKGROUND OF THE INVENTION

[0003] Presently available women's clothing apparel generally do not include breast support. Typically, breast support systems, such as a bra, are a component separate from the shirt or dress and have a separate strap arrangement for supporting the bra and garment over a woman's shoulder.

[0004] One disadvantage of having a separate strap for the bra and for the garment is that the bra strap can be displaced from being completely covered by the garment shoulder strap when a woman performs routine activities while wearing the garment/bra arrangement. Exposure of the bra strap beneath the garment strap can give an unkempt look. This can be a particular problem when the shoulder support straps of the garment are thin, i.e., about the same width as the bra strap. In addition, the independent movement of the two straps on a woman's shoulder can be constantly irritating and require repeated manual adjustment to realign the bra strap and the garment strap.

[0005] One alternative is to use a single strap to provide over-the-shoulder support to both the cup portions of the bra and the garment. Such arrangements are disclosed in, for example, U.S. Pat. Nos. 4,398,538 and 4,798,557. However, in general, arrangements having a single strap for both the bra and garment do not provide the support necessary for full figured women.

[0006] Another alternative is to provide the garment with a built in bra. Such arrangements are disclosed in, for example, U.S. Pat. Nos. 5,478,278 and 5,678,246. While these arrangements may provide adequate breast support, the bra and garment are generally fixed together over portions of the body of the bra (i.e., cups, sides and back region) and the strap region. This arrangement can be disadvantageous because the garment cannot move freely relative to the body of the bra.

[0007] Clasp systems are available for fixing the garment strap and bra strap in position as illustrated in U.S. Pat. No. 5,590,545. However, in addition to being unsightly, clasps generally only provide a localized point of fixation thus allowing relative displacement between the garment shoulder strap and the bra strap at regions that are not directly fixed together by the clasp.

[0008] Another alternative is to not wear a bra when wearing a sleeveless or thin strapped garment. This, however, is frequently a disadvantage for full figured women or women performing sports or other physical activities.

[0009] Accordingly, there is a need for women's garments, particularly garments that are sleeveless or thin strapped, that permits constant coverage of the strap of an underlying bra by the garment shoulder strap.

### SUMMARY OF THE INVENTION

[0010] Throughout the specification, guidance is provided through lists of examples. In each instance, the recited list serves only as a representative group. It is not meant, however, that the list is exclusive.

[0011] The invention is directed to articles of clothing including a garment and a bra or bra straps. According to the invention, a garment can include a first and second garment support which extend from the front of the garment to the back of the garment. Alternatively, a garment can include a first and second garment support which extend from the front of the garment to behind the wearer's neck where the first and second garment supports attach to one another.

[0012] A bra according to the invention includes a bra body and first and second bra straps. The bra body has a front, a back and sides. In a typical embodiment, the first and second bra straps are fastened to the first and second garment supports, respectively. The bra straps can be non-removable or selectively removable from the garment supports. In some embodiments, the body of the bra can be selectively detachable from the bra straps.

[0013] Articles of clothing according to the invention are particularly advantageous for use with garments having garment supports which are narrow, such as "spaghetti straps." The garment of an article of clothing according to the invention can be a dress, a blouse, a tank top, halter top, tube top, bathing suit, etc.

[0014] Fastening the bra straps to the garment supports provides the herein disclosed articles of clothing with an overall neater appearance. In addition, the articles provide breast support and comfort for regular use or for use during physical activity.

### BRIEF DESCRIPTION OF THE DRAWINGS

[0015] FIG. 1A illustrates a front view of an embodiment of a prior art garment and bra arrangement;

[0016] FIG. 1B illustrates a side view of the embodiment of FIG. 1A;

[0017] FIG. 1C illustrates a back view of the embodiment of FIGS. 1A and 1B;

[0018] FIG. 2A illustrates a front view of one embodiment of a garment and bra arrangement according to the invention;

[0019] FIG. 2B illustrates a side view of the embodiment of FIG. 2A;

[0020] FIG. 2C illustrates a back view of the embodiment of FIGS. 2A and 2B;

[0021] FIG. 3A illustrates one preferred embodiment of the invention wherein the garment is freely moveable over

the body of the bra while the garment supports are fastened along a portion of the bra straps;

[0022] FIG. 3B illustrates another view of the embodiment shown in FIG. 3A;

[0023] FIG. 4A illustrates a front view of a garment with a bra beneath, in phantom lines, wherein the bra straps are fastened substantially along the garment supports;

[0024] FIG. 4B illustrates a back view of the garment of FIG. 4A;

[0025] FIG. 5 illustrates an alternative embodiment of a bra according to the invention;

[0026] FIG. 6 illustrates an alternative embodiment of a garment and bra arrangement according to the invention including the bra of FIG. 5;

[0027] FIG. 7 illustrates a front view of an alternative embodiment of an article of clothing according to the invention;

[0028] FIG. 8 illustrates a back view of the embodiment of FIG. 7;

[0029] FIG. 9 illustrates a front view of an alternative embodiment of an article of clothing according to the invention;

[0030] FIG. 10 illustrates a back view of the embodiment of FIG. 9;

[0031] FIG. 10A illustrates a front view of an alternative embodiment of a bra according to the invention;

[0032] FIG. 11 illustrates a front view of an alternative embodiment of an article of clothing according to the invention;

[0033] FIG. 12 illustrates a back view of the embodiment of FIG. 11;

[0034] FIG. 13A illustrates an alternative embodiment of an article of clothing according to the invention;

[0035] FIG. 13B illustrates a back view of the embodiment of FIG. 13A;

[0036] FIG. 14A illustrates yet another alternative embodiment of an article of clothing according to the invention;

[0037] FIG. 14B illustrates a back view of the embodiment of FIG. 14A; and

[0038] FIG. 15 illustrates yet a further alternative embodiment of a bra according to the invention.

#### DETAILED DESCRIPTION

[0039] The present disclosure is directed to women's garments, worn with a bra underneath, that provides substantial, continuous coverage of the strap of the bra. In a preferred embodiment, the garment is mobile relative to the body of the bra. Alternative embodiments are also disclosed.

[0040] As used herein, the term "garment" refers to women's clothing apparel that covers the upper body region including the breasts, for example, dresses, blouses, t-shirts, tank tops, bathing suits, halter tops, tube tops, etc. The "garment shoulder support" or "garment support" refers to that region of the garment that extends from the front of the

garment to the back of the garment in the shoulder region to support the garment on a woman's shoulder (i.e., over-the-shoulder-support). The garment support can be narrow or broad. According to the invention, narrow and broad garment supports include the supports of all sleeveless garments. Narrow and broad support garments may include lateral extensions such as long or short sleeves. The over-the-shoulder supports of a garment having narrow shoulder supports (e.g., straps), may sometimes be referred to as "spaghetti straps."

[0041] As used herein, the term "bra" refers to common breast support systems which fall under the term "bra" and which can have a "bra strap" that extends from the front of the bra over a woman's shoulder to the back of the bra. The "body" of the bra includes the front, back and sides of the bra. The "front" of the bra includes that portion of the bra which directly surrounds or supports the breasts (e.g., cups). The "back" of the bra refers to that region of the bra that passes across a woman's back. The back of the bra often includes a clasp or other similar arrangement to facilitate putting on and taking off the bra. The "sides" of the bra are between the front and the back and in use are generally positioned under a woman's arm pits. As used herein, the "body" does not include the bra straps which typically support the bra in place over a woman's shoulder. Examples of bras suitable for the invention include, underwire bras, push-up bras, padded bras, pocket bras with removable padding, wireless bras, lace bras, water bras, etc.

[0042] In one embodiment of the invention, the bra straps can be attached to the garment support substantially along the length of the bra strap from the front to the back of the garment. According to the disclosure, the bra straps can be fastened to the garment shoulder supports using fasteners such as hook and loop (e.g., VELCRO®), snaps, zippers, buttons, loops, stitched thread, pattern (e.g., continuous, discontinuous, etc.), etc.

[0043] Fastening the bra straps to the garment supports, substantially along the length of the bra strap underlying the garment support, provides a neat appearance without constant visualization of the bra straps protruding outside the garment shoulder supports. By fastening the bra to the garment supports only in the over-the-shoulder regions, preferred embodiments of the herein disclosed articles of clothing also provide free movement of the garment relative to the body of the bra. In some embodiments, the bra strap and garment support may be fastened only in the region from the front of the garment to the top of the shoulder or from the back of the garment to the top of the shoulder. According to this embodiment, in the former arrangement (i.e., fastened from front of garment to top of shoulder), the bra strap and garment support could extend to the back of the garment (or bra) not fastened to one another. In the latter arrangement, the bra strap and garment support could extend to the front of the garment (or bra) not fastened to one another.

[0044] In some embodiments, the garment supports may not extend to the back of the garment. For example, the garment supports may extend from the front of the garment and attach to one another behind the wearer's neck. In these embodiments, the garment supports and bra straps can be fastened together starting at about the front of the garment and extend together along the length of the garment support to a region of the garment support which in use would be

positioned at, or behind, the wearer's neck. At this point, the support straps can be attached to one another by tying (e.g., a halter top) or using known clasping arrangements.

[0045] In a particularly advantageous embodiment, the disclosure provides for wearing a bra beneath a garment having narrow shoulder supports, such as "spaghetti straps." In a preferred embodiment, the garment is freely moveable relative to the body of the bra but fastened from the front to back of the garment along substantially the length of the garment shoulder support.

[0046] As used herein, the term "substantially" is used to indicate some variation in, for example, the location of a fastener, but the variation still providing the function within the scope and principles of the invention.

[0047] As will be disclosed below, the bra straps of the invention can be fastened to the garments to provide for removal of the bra from the garment. In some embodiments, the body of the bra can be detached from the straps, regardless of whether the straps are removable or non-removable from the garment supports. This feature advantageously provides for using the bra, or body of the bra, with different garments or the same garment with different bras or bra bodies. This aspect of the invention provides for articles of clothing to be available which have bra straps fastened to the garment supports, but no bra body. A selectively detachable bra body would be available separately. Alternatively, an article of clothing can be available with garment supports which include a fastener capable of fastening a removable bra, but no bra. Separate removable bras would also be available. These embodiments allow the consumer to mix and match garments and bras, or bra bodies.

[0048] In some embodiments, the invention provides for selective adjustment of the position of the bra strap or garment support relative to the bra. For example, in one embodiment, the front, back, or front and back of the bra can include a selectively adjustable attachment arrangement for mounting to a bra strap or garment support. In one such embodiment, a strap attachment arrangement can be positioned sequentially along the front or back portion of the bra. Hence, attaching the bra to a strap attachment arrangement further from the over-the-shoulder region, causes less upward pull to be exerted under the breasts than if attached to a strap attachment arrangement nearer to the over-the-shoulder portion. The selectively adjustable attachment arrangements can alternatively be positioned on the bra strap or garment support. The strap attachment arrangement of the selectively adjustable systems can be any suitable arrangement as described throughout the disclosure.

#### DETAILED DESCRIPTION OF THE ILLUSTRATED EMBODIMENT

[0049] FIGS. 1A-1C illustrate one example of a problem with prior art arrangements of a bra and garment which is addressed by the present invention. In the illustrated embodiment, tank top 10 has garment supports 11a and 11b which are narrow and may be relatively displaced so as not to cover the bra straps 12a and 12b of the bra beneath the tank top 10. FIG. 1B is a side view and FIG. 1c is a back view of the same garment arrangement as FIG. 1A.

[0050] FIGS. 2A-2C illustrate one embodiment of a clothing article 40 according to the invention comprising a tank

top 41 having garment supports 42a and 42b which are fastened to the bra straps (not visible) substantially along the length of the bra straps in the region of the garment supports. Referring to FIGS. 3A and 3B, in one preferred embodiment, garment shoulder supports 42a and 42b of clothing article 40 and bra straps 51a and 51b (not visible in this view), of bra 50 are fastened together substantially from the front end 55a of bra strap 51a, to the back of garment 41. FIG. 3B illustrates that in preferred embodiments, the region of the garment 41 which covers the body 54 of bra 50 can be freely removable from the body 53 of the bra.

[0051] FIGS. 4A and 4B illustrate a front and back view of another embodiment of a clothing article 55, such as a drape neck top 56, showing the body 60 of bra 61 in phantom lines. The body 60 of bra 61 includes a front 62, a back 63 and sides 64a and 64b. The front 62 of bra 61 includes cups 65a and 65b. The bra straps 66a and 66b (phantom lines) are fastened to the garment supports 67a and 67b of top 56 by fastener 68a and 68b which is represented in the illustration by diagonal lines. The fastener can provide for the bra to be non-removable from the garment such as by a threaded stitch, an adhesive, etc. or selectively removable by using, for example, hook and loop (e.g., such as known under the trade designation VEL-CRO®), zippers, snaps, buttons, clasps, etc. If a threaded stitch is used, one or more rows of a continuous or intermittent stitch pattern can be used.

[0052] The back 63 of bra 61 includes a centrally located clasp 69 to facilitate putting on and taking off bra 61. In addition, an adjustment arrangement 70a and 70b can be provided for adjustment of the length of bra straps 66a and 66b, respectively. In the illustrated embodiment, the body 60 of bra 63 is not fastened to the top 56. However, bra straps 66a and 66b are fastened to garment supports 67a and 67b substantially along the length of the garment supports 67a and 67b from the front 71 to the back 72 of garment 56. Thus, the body 60 of bra 61 is freely moveable beneath top 56 for comfort and neat appearance. The unkempt appearance of the bra straps 66a, 66b displaced from beneath the garment supports 67a, 67b is eliminated.

[0053] FIGS. 5 and 6, illustrate one embodiment of a bra of the invention wherein the body of the bra is selectively detachable from the bra straps. This embodiment permits interchangeability of bra bodies and garments. Referring to FIG. 5, bra 110 includes a body 100, comprising front 101, sides 102a, 102b, back 103, and straps 104a, 104b.

[0054] Front 101 of bra 110 has first cup 150a and second cup 150b. In this embodiment, cups 150a and 150b include a base region 151a, 151b and an apex region 152a, 152b. The tear-drop shape of cups 150a and 150b provides for positioning front attachments 106a and 106b at apex region 152a, 152b to provide even and comfortable support for the wearer. This bra cup configuration also provides a smoother appearance under a garment without a visible defining line at the top edge of the bra. In this embodiment, body 100 is attached to the bra straps 104a, 104b by strap attachment arrangement 105 which provides for selectively attaching and detaching the bra straps 104a, 104b to the front 101 and back 103 of the body 100 of bra 110. According to this embodiment, strap attachment arrangement 105 can include front attachments 106a, 106b which are the same or different than back attachments 107a, 107b. In the illustrated embodi-

ment, front attachments **106a**, **106b** each include a hook members **108**, mounted at the front ends **109a**, **109b** of straps **104a**, **104b**, to selectively attach and detach from loop members **111a**, **111b** at the front **101** of bra **110**. Back attachments **107a**, **107b** each also include hook members **108** mounted at the back ends **112a**, **112b** of straps **104a**, **104b** which can selectively attach and detach from loop members **113a**, **113b** at the back **103** of bra **110**. It will be appreciated that the relative locations of the hook members and loop members can be the inverse of that illustrated. Also, other strap attachment arrangements **105**, which provide for selective detachability of the body of the bra from the straps, such as hook and loop (VELCRO®), buttons, snaps, clasps, zippers, etc., can be used.

[0055] As illustrated, an adjustment arrangement **120a** and **120b** can be included for adjusting the length of bra straps **104a**, **104b**. Suitable adjustment arrangements are known in the art.

[0056] FIG. 6 illustrates that the feature of selective detachability of body **100** of bra **110** from straps **104a** and **104b** (not visible) still permits for the bra **110** to be freely moveable beneath a garment **160**. In addition, as described previously for other embodiments, a clothing article including a strap attachment arrangement **105** for selective detachment of the bra body **100** can include a fastener **161** which provides for the bra straps to be removably or non-removably fastened to the garment supports.

[0057] FIGS. 7 and 8 illustrate an alternative embodiment of an article of clothing **200** according to the invention. According to this embodiment, garment **201** includes garment supports **202a**, **202b** which attach to each other using a garment support attachment **203** behind the wearer's neck. As illustrated in phantom lines, bra **204** includes a body **205** having a front **206**, sides **207a**, **207b** and back **208**. Article of clothing **200** includes fastener **209a** and **209b** (diagonal lines) to fasten bra straps **210a** and **210b** (hatched line) to garment supports **202a**, **202b** from the front **220** of the garment **201** to near the garment support attachment **203** using previously described removable or non-removable fasteners. Also, as described for other embodiments, bra **204** can include a body **205** which is selectively detachable or non-selectively detachable to bra straps **210a** and **210b**.

[0058] Referring to FIGS. 9 and 10, in another embodiment, a halter top **300**, including a removable or non-removable, detachable or non-detachable bra **301**, is illustrated. According to this embodiment, the bra straps **302a**, **302b** of bra **301** are fastened by a fastener **303a**, **303b** (diagonal lines) along a portion of garment supports **304a**, **304b**, preferably extending at least a distance along the support straps **303a**, **303b** to near the wearer's neck. The bra straps **302a**, **302b** can extend to the end of ties **305a**, **305b** (i.e., garment supports) or stop at or near the wearer's neck as illustrated.

[0059] Referring now to FIG. 10A there is illustrated a bra body **700** including strap attachment arrangement **701** at the front **702** of bra body **700** but not at the back **703**. Strap arrangement **701** includes front attachments **704a** and **704b**. In this embodiment, front attachments **704a** and **704b** include loops **705a** and **705b** for cooperative attachment to hooks of a bra (not shown). As described for other embodiments, the strap attachment arrangements **701** can include a hook member, loop member or any other type of arrange-

ment suitable for attachment to the bra strap. Thus, this embodiment provides for the attachment to the front **702** of the bra body **700** only. In addition to use with other types of garments, bra body **700** may be advantageously used with garments such as those illustrated in FIGS. 7-12.

[0060] In another embodiment of a halter top **400**, shown in FIGS. 11 and 12, a bra **401** lacking bra straps may be used. According to this embodiment, small triangular shaped regions **402a**, **402b** at the front **403** of bra **401**, near each of the apexes **404a**, **404b**, are attached to the garment **405**. The small regions **402a**, **402b** of attachment can also be used in clothing articles wherein bra straps are present and fastened to the garment support.

[0061] FIGS. 13A and 13B illustrate a front and back view of another embodiment of a clothing article **500**, such as tank top **501**, showing the body **502** of bra **503** in phantom lines. The body **502** of bra **503** includes a front **504**, a back **505** and sides **506a** and **506b**. The front **504** of bra **503** includes cups **507a** and **507b**. The bra straps **508a** and **508b** (phantom lines) are fastened to the garment supports **509a** and **509b** of tank top **501** by fastener **510a** and **510b** which is represented in the illustration by diagonal lines. The fastener can provide for the bra to be non-removable or removable from the garment as discussed for other embodiments of the invention. FIGS. 13A and 13B also illustrate that a bra strap adjustment arrangement **521a**, **521b** can be located along bra straps **508a** and **508b**, respectively, near the front **504** of the body **502** of bra **503**. Also, as illustrated in this embodiment, rather than having a central clasp at the back **505** of the body **502** of bra **503** for facilitating putting the bra on and taking bra off, a clasp **520** can be located at the front **504** of the body **502** of bra **503**.

[0062] FIGS. 14A and 14B illustrate an article of clothing **600** wherein the body **601** of bra **602** includes a clasp **620** at the front **604** of the body **601**. A strap attachment arrangement **605** for selectively detaching the body **601** of bra **602** is illustrated. In addition, this embodiment shows that an article of clothing **600** can have strap adjustment arrangements **606** located at the front **607a**, **607b** of bra straps **608a**, **608b** and/or at the back **609a**, **609b** of bra straps **608a**, **608b**.

[0063] In addition, a bra of the invention can also include a bra body having a clasp arrangement at the front and back of the body of the bra to facilitate putting on and taking off the bra. Such a bra body can be removable or non-removable from the garment and the bra body can be non-detachable or selectively detachable from the bra straps. Also, an article of clothing can also have a hook member mounted at the front ends and back ends of the garment supports. A previously described bra body can include loop members at the front and back of the bra body to selectively detach the bra body from the hook members at the garment supports. As discussed previously, the relative locations of the hook members and loop members (or other strap attachment arrangements) can be inverse to that stated. However, because this embodiment lacks bra straps, it is less preferred for providing support than other embodiments of the invention.

[0064] The disclosed arrangements provide for the bra straps to fully support the body of the bra without relative displacement of the bra straps from beneath the garment supports. Thus, an article of clothing according to the invention eliminates the need for repeated rearrangement of

the garment support and the bra strap to keep the bra strap hidden beneath the garment support. Also, unlike safety pins, clasps or other devices that provide a point fixation between the garment support and the bra strap, the fasteners of the present invention not only maintain the relative position of the garment support to the bra strap but also eliminate visualization of the bra strap in regions away from single point fixation when bending, turning or performing some other movement that can cause the bra strap to separate from the garment support if only fixed together at a single point.

[0065] Fixation of the bra strap to the garment shoulder support is advantageous for use with sleeveless garments, and particularly garments with a narrow (thin) shoulder supports (e.g., spaghetti straps) for providing a neater appearance. Fastening the bra strap to the garment support according to the invention is particularly beneficial to women needing a B-cup bra or larger as well as women needing an A-cup who may wish to include padding within the bra. It will be appreciated that an article of clothing according to the invention can include bras having varied cup sizes, thicknesses, with or without underwires, pads, push-ups or any other components which may be used with or as a part of the bra.

[0066] The articles of clothing according to the invention advantageously provide breast support with increased comfort for regular use or for jogging, running, skiing or other physical activity with a feeling of security and without the pain or discomfort that can be associated with unsupported breasts.

[0067] Referring to **FIG. 15**, there is illustrated an alternative embodiment of a bra **800** suitable for use in the scope of the present invention. In this embodiment, bra body **801** includes a front **802**, first and second sides **803a** and **803b**, and a back **804**. The front **802** includes cups **805a** and **805b**. Bra **800** includes front attachment regions **806a**, **806b**, one for each cup **805a**, **805b**. At front attachment regions **806a**, **806b** there are selectively adjustable attachment arrangements **807a**, **807b**, respectively, which include at least two (three illustrated) loop members **808a** and **808b**, positioned such that each loop member **808a**, **808b** on each arrangement **807a**, **807b** is nearer or further from the over-the-shoulder portion of a bra strap or garment support relative to other loops on the same strap or garment support. Hence, for a given strap attachment arrangement on a bra strap or garment support having a hook member, the position of each loop member of attachment arrangement **807a**, **807b** provides a different amount of breast lift or support when attached to the hook member. Thus, the wearer can selectively adjust the amount of breast support by simply selecting an alternative loop member on the adjustment arrangement **807a**, **807b**.

[0068] It will be appreciated that the loop members of embodiment **800** can be attached to hooks on the bra strap or garment support. The selectively adjustable attachment arrangement can be located on the front, back, or front and back of the bra body. Also, while a plurality of loop members and a hook members for the selectively adjustable attachment arrangement are shown for the illustrated embodiment, a plurality of hook members could be used to cooperatively mount to a loop member mounted to the bra strap or garment support. Alternatively, the selectively

adjustable attachment arrangements can be located on the bra strap or garment support rather than the bra body. Other types of attachment arrangements providing for selective adjustment of a bra will be apparent after reading this disclosure and are also within the scope of the invention. A bra having selectively adjustable attachment arrangements as described herein can be used with bra strap or garment support as disclosed for some embodiments herein, or with bra straps that are not fixed to a garment support.

[0069] The entire disclosure of all patents cited in this disclosure are incorporated herein by reference.

[0070] From the foregoing detailed description it has been shown how the objects of the invention have been obtained in a preferred manner. However, modifications and equivalence of the disclosed concepts such as those which would occur to one of ordinary skill in the art are intended to be included within the scope of the present invention.

What I claim is:

1. An article of clothing comprising:

a garment including a first garment support having a first length and a second garment support having a second length;

a bra, the bra comprising:

(i) a body having a front, a back and a side; and

at least one selectively adjustable attachment arrangement for mounting the bra body to the garment.

2. The article of clothing according to claim 1 wherein the selectively adjustable attachment arrangement is mounted to the first garment support.

3. The article of clothing according to claim 1 further comprising a first bra strap attached to the front of the body and to the back of the body, and a second bra strap attached to the front of the body and to the back of the body.

4. The article of clothing according to claim 3 wherein a first fastener fastens the first bra strap to the first garment support and a second fastener fastens the second bra strap to the second garment support.

5. The article of clothing according to claim 3 wherein the selectively adjustable attachment arrangement is mounted to the first bra strap.

6. The article of clothing according to claim 1 wherein the selectively adjustable attachment arrangement is mounted to the bra body.

7. The article of clothing according to claim 4 wherein the first and second fasteners provide for selectively removing the first and second bra straps from the garment supports.

8. The article of clothing according to claim 1 wherein the bra and garment are not fastened at any one of the front, back and side of the body of the bra.

9. The article of clothing according to claim 1 wherein the first and second garment supports are spaghetti straps.

10. The article of clothing according to claim 1 wherein the garment is a dress.

11. The article of clothing according to claim 1 wherein the garment is a tank top with spaghetti straps.

12. The article of clothing according to claim 1 wherein the selectively adjustable attachment arrangement includes a plurality of hook members

13. The article of clothing according to claim 1 wherein the selectively adjustable attachment arrangement includes a plurality of loop members.

**14.** A bra comprising:

a body having a front, a back and a side; and

at least one selectively adjustable attachment arrangement for attaching the bra to a bra strap.

**15.** The bra according to claim 14 wherein the selectively adjustable attachment arrangement includes a plurality of loop members.

**16.** The bra according to claim 14 wherein the selectively adjustable attachment arrangement includes a plurality of hook members.

**17.** The bra according to claim 14 further comprising a second bra strap.

**18.** The bra according to claim 17 wherein the bra strap and the second bra strap each includes a plurality of hook members for mounting to the bra body.

**19.** The bra according to claim 14 wherein the first and second bra straps each include a hook member for mounting to a selected one of a plurality of loop members on the bra body.

**20.** The bra according to claim 14 wherein there are no attaching arrangements at the back of the bra body for mounting the bra body to a bra strap.
