Osaka-shi, Osaka 545-8522 (JP)

(54) **A touch-panel input type electronic device**

(57) A displacement between an input point on a touch-sensitive panel and a display point on a display panel must be reliably corrected by a simple inexpensive means. A transparent touch-sensitive panel (23) having a coordinate system formed on its surface for locating the position of a point input and a LCD panel (22) having a coordinate system for locating the position of a display point corresponding the input point on the touch-sensitive panel are laminated together and swing-

ably attached to a main body (10). A rotation angle of the touch-sensitive panel (23) and the LCD panel (22) with respect to the main body (10) is detected by an angle detector (24). The abscissa and ordinate values of an input point in the coordinate system of the touch-sensitive panel (22) are corrected according to a rotation angle detected by the angle detector (24) and a distance between the surfaces of two panels and displayed in the display coordinate system of the LCD panel (22).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 30 1222

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
