(54) Title: RF ID TAG

(57) Abstract: An identification tag holder (100) includes an identification tag shell (101) containing a transmitter (122). An identification card (110) is placed into the identification tag shell (101). An identification tag interface (126) reads identification data from the identification card (110) which is transmitted by the transmitter (122). A remote identification tag identification system (151) includes one or more remote identification tag components each having an identification tag reader and a transmitter. An identification tag (110) is inserted into the identification tag component, such that identification data may be read from the identification tag (110) by the identification tag reader (107). A location receiver (156) receives identification data transmitted by the transmitter (122). A location processor (158) processes said received identification data.
