(54) Title: RECONFIGURABLE GOLF GAME

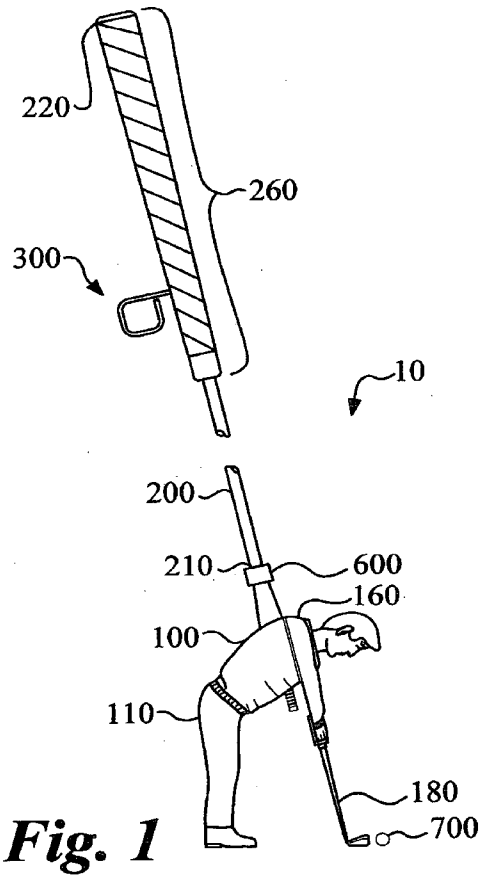

Fig. 1

(57) Abstract: A reconfigurable golf game (10) having an interchangeable body (100), a hollow shaft (200), a swing actuation system (300), and a coupler (600). The coupler (600) allows a user that purchases one game system including multiple interchangeable bodies (100) to easily attach different interchangeable bodies (100) to the hollow shaft (200) thereby changing the game. The various interchangeable bodies (100) mimic the look and swing characteristics of modern professional golfers. The swing actuation system (300) includes a translational motion system (310), including a rack (350) and prime mover (320), and a rotational motion system (450), including a pinion (460) In operation the user grips the hollow shaft (200) and activates the translational motion system (310) by pulling the prime mover (320), and thus the rack (350), away from the interchangeable body (100), the rotational system pinion (460) cooperates with the rack (350) thereby causing the rotating body portion to rotate from a maximum backswing position to a maximum follow-through position, striking the replica golf ball (700).

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means.

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
