Abstract Title: **Condom which makes the penis larger**

A condom which increases the physical appearance of a male penis by means of any type of material or design. The condom may artificially increase the overall size of the penis. The condom may increase the length of the penis by approximately 2.54 centimetres although the size of the increase and shape are not specific. The condom may comprise a latex sheath 2 with a ring 1 and a shaped plastic mould 5 with a concave interior 3 and a hole 4 to permit ejaculation. The mould 5 may be inserted inside the tip of the condom during manufacture. The condom may be conventionally packaged. The condom is designed to increase the physical appearance to encourage users to wear them and prevent the spread of HIV.
Description

Condom that makes your penis larger

Having worked in Madagascar before and constantly catching the news and learning about the increase of HIV and Aids in the world. I've always thought that there is something missing when you have a product such as a condom that is very effective and yet nobody seems to wear them.

I think the problem lies in the way people view wearing condoms, they are seen as un-cool, clumsy and something which spoils the mood. I think condoms basically haven't got enough plus sides to make people wear them. The only reason someone would wear one is to prevent sexual diseases and that reason doesn't seem to be important enough to make people buy them.

My product is a condom that makes your penis size artificially larger and it is designed to be a part of a new range of condoms to make wearing them more fun. My product is quite simply a plastic mould shaped to resemble the shape of a penis head. This mould is glued to the inside of a normal style condom during the manufacturing process. As the condom is rolled onto the penis the mould fits around the front of the penis then sticks out in front of the penis by a certain length artificially increasing its size. This mould is made out of see through plastic and is hollow with a hole / slot in the base end to allow the male to ejaculate. As the mould is attached to the condom during the manufacturing stage the user is able to roll the whole product on in an easy fashion similar to putting on a normal condom.

The packaging will be similar to a normal condom only the shape of the packaging will differ to accommodate the mould. The mould could vary in size i.e. the length and also the width to accommodate all sizes of penis.

This product is designed to benefit a wide range of women who prefer larger penis sizes and also to make men feel more confident whilst having sex.

In the four diagrams attached:

Key
1. = The ring of the condom
2. = The latex condom sheath
3. = Shows the concave 3D shape to the inside of the mould
4. = This is the hole / slot inside the mould
5. = Actual mould body

Figure 1.1 shows a plan view of the final product rolled out. If you could imagine this rolled over a penis then you can see the head of the penis would fit into the concave (3) cut out in the back of the mould. Number 4 shows the position of the hole / slot which is positioned right in front of the urethra to allow sperm to flow into the hollow mould. As you can see the plastic mould (5) has clearly made the physical appearance of the male penis larger. The mould is attached to the latex condom during the manufacturing stage, here you can see that the mould is covered by the (2) latex condom sheath.

Figure 1.2 shows a side plan of the product rolled out, whilst figure 1.3 shows a side view and figure 1.4 shows a plan view of what the product would look like as it is taken out of the packaging.
The Claims

The invention I want to patent is a condom that increases the physical appearance of a male penis by using any type of material or design idea.

The size of the increase is not specific nor is the design of the product i.e. the shape, size and attachment of the mould. I want to patent the idea / creation of a condom that is designed in a certain way to increase the overall size of a male penis be it an artificial increase. This is what I want to protect.

The name of the product, the design (size, shape of the mould), packaging, and advertising is not specific it’s the concept of the product.
