(54) Title: CLOUD-BASED MEDIA DEVICE CONFIGURATION AND ECOSYSTEM SETUP

FIG. 13

(57) Abstract: Embodiments relate generally to electrical and electronic hardware, computer software, wired and wireless network communications, and portable and wearable media devices. Media devices may include a plurality of RF transceivers and an audio system. The RF transceivers and/or audio system may be used to wirelessly communicate between media devices and allow configuration and other data to be wirelessly transmitted from one media device to another media device. A user device may be used to Bluetooth® (BT) pair with a media device and to install a configuration on the media device. Other media devices may be configured using the configuration without breaking the BT pairing and without the other media device having to BT pair with the user device. Each media device may include at least one antenna and may include an antenna that is detunable.
