UNITED STATES PATENT OFFICE.

JOHN G. GROOCK, OF NEW YORK, N. Y.

IMPROVEMENT IN SURGICAL BANDAGES.

Specification forming part of Letters Patent No. 120,814, dated November 14, 1871.

To all whom it may concern:

Be it known that I, JOHN G. GROOCK, of the city of New York, State of New York, have invented a useful and Improved Surgical Bandage; and I do hereby declare the following is an exact description thereof, reference being had to the accompanying drawing and to the letters of reference marked thereon making a part of this specification, in which—

Figure 1 represents the bandage with a buckle and strap with eyelets. Fig. 2 represents an end view of the buckle and strap.

The nature of my invention consists in a tubular bandage furnished with a fastening of a peculiar construction, to be hereinafter described; the object being to bandage and fasten the bandage firmly to the disabled limb of man or animal.

A represents the bandage, made of knit or woven material, and tubular, having a buckle,

B, at one end, with strap, and eyelet-holes C in the strap, so that when the bandage is wound around the limb the strap is inserted into the buckle, and the upright fixed or rigid tongue D is inserted into one of the eyelet-holes C, and the bandage is held permanently to the limb. The tongue D is a projecting immovable pin at the center bar E of the buckle, having a round head at its top, so as to secure the strap permanently to the pin.

What I claim as my invention, and desire to secure by Letters Patent, is—

As an article of manufacture, the tubular and woven bandage A, with a perforated strap, C, and buckle B, with fixed pin D at the ends, for the purposes set forth.

JOHN G. GROOCK.
