DESCRIPTION

FIG. 1 is a perspective view taken from the front, top and left sides of a first embodiment of the demonstration and exhibition stand showing our design;

FIG. 2 is a perspective view taken from the rear, top and right sides of the embodiment of FIG. 1;

FIG. 3 is a front elevation of the embodiment of FIG. 1;

FIG. 4 is a right side elevation of the embodiment of FIG. 1, and

FIG. 5 is a top plan view of the embodiment of FIG. 1.

The rear elevation of the embodiment of FIG. 1 is identical to the front elevation.

FIG. 6 is a perspective view taken from the front, top and left sides of a second embodiment of the demonstration and exhibition stand showing our design;

FIG. 7 is a perspective view taken from the rear, top and right sides of the embodiment of FIG. 6;

FIG. 8 is a front elevation of the embodiment of FIG. 6;

FIG. 9 is a right side elevation of the embodiment of FIG. 6, and

FIG. 10 is a top plan view of the embodiment of FIG. 6.

The rear elevation of the embodiment of FIG. 6 is identical to the front elevation.

FIG. 11 is a perspective view taken from the front, top and left sides of a third embodiment of the demonstration and exhibition stand showing our design;

FIG. 12 is a perspective view taken from the rear, top and right sides of the embodiment of FIG. 11;

FIG. 13 is a front elevation of the embodiment of FIG. 11;

FIG. 14 is a right side elevation of the embodiment of FIG. 11; and,

FIG. 15 is a top plan view of the embodiment of FIG. 11.

The rear elevation of the embodiment of FIG. 11 is identical to the front elevation.

In FIGS. 1–15, the demonstration and exhibition stand is formed as a rectangular section of a sloping roof wall and an adjoining approximately vertical interior wall member. In the roof wall section, a rectangular opening is provided for fitting of a window product to be demonstrated or exhibited. The sloping roof wall is supported at one or both sides by a vertical post.
