**Built-in oven with two baking rooms.**

A built-in oven especially of the electric type, with the standard height of 60 cm, has two distinct baking rooms, specifically a larger one in the usual position of the oven and a smaller one in the upper position, where the control devices, which are now moved to the side of the smaller oven, are usually located. The control devices can all be located on only one side of the smaller oven, or can be distributed on both sides. Owing to its small dimensions, the door of the upper oven can be of the slidable type, with a glass panel mounted thereon and laterally projecting therefrom to the whole width of the front wall of the oven, thereby covering said control devices. The glass panel is preferably hinged to the lower part of the door and comprises a lever in the upper part for engaging therewith, said lever being part of a handle that opens and closes the assembly when the lever is engaged, or only the glass panel when the lever is not engaged.
