(54) Title: SOLID PHARMACEUTICAL COMPOSITION OF GABAPENTIN

(57) Abstract: The present invention relates to solid pharmaceutical compositions of gabapentin that have good stability and good bioavailability of the active principle, and that can be used for preparing pharmaceutical solid forms of gabapentin for oral administration. The pharmaceutical composition of the invention is a solid composition comprising an intragranular phase and an extragranular phase. It is a solid composition that is of a granular appearance, but includes non-granulated particles of the extragranular phase. The invention lays on the incorporation of a hydrophobic compound in the intragranular phase, and a humectant in the extragranular phase which leads to the preparation of solid compositions of gabapentin that have good stability and good bioavailability of the gabapentin.

* Special categories of cited documents:

A document defining the general state of the art which is not considered to be of particular relevance

E earlier document but published on or after the international filing date

L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

O document referring to an oral disclosure, use, exhibition or other means

P document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
