Patent No. 1,337,698

T. GONGORA.
MEN'S GARMENT.
APPLICATION FILED FEB. 12, 1918.

Patented Apr. 20, 1920.

INVENTOR
TOMAC GONGORA,
BY
ATTORNEYS
To all whom it may concern:

Be it known that I, Tomás Góngora, a citizen of Mexico, and a resident of San Antonio, in the county of Bexar and State of Texas, have invented new and useful Improvements in Men's Garments, of which the following is a specification.

My invention is an improvement in man's garments, and has for its object to provide a garment of the character specified which is reversible, and wherein a seam is used making the stitches appear the same on both sides of the garment.

In the drawings:

10. Figure 1 is a perspective view of a pair of trousers constructed in accordance with the invention;

Fig. 2 is a section on the line 2--2 of Fig. 4;

Fig. 3 is a view similar to Fig. 2, showing the parts in another position;

Fig. 4 is a front view of a modified form of pocket, from the outside; and

Fig. 5 is a similar view from the inside.

In the present embodiment of the invention, a pair of trousers 1 is provided, the said trousers having the usual waist band 21 and having pockets 3.

The waist band 21 has two extensions 9 and 10 at the closing flaps of the trousers, the said extensions extending beyond the said closing flaps, and each extension has a button-hole which is adapted to engage a button 11 on the body of the waist band, the said buttons being spaced from the flaps as shown. One of the flaps has button-holes 12, and the other has buttons 13 for engagement by the button-holes to close the flap, and the buttons are on the inner side of the flap so that when the garment is reversed the buttons will be hidden when the flaps are closed. One of the buttons 11 is on the outer face of the band and the other is on the inner, so that when the garment is in normal or reversed condition one button will be outside and the other inside.

As shown in Fig. 2, the waist band is composed of two strips of material which are stitched at their upper edges, the edges being turned in, and at their lower edges the strips are placed on opposite sides of the body of the garment and stitched thereto, the edges being turned in.

To provide pockets, the garment 1 is slit at the pocket, as indicated at 15, and the pocket 16 is made from a separate piece of the cloth. This pocket is supported by support-
