Description of the invention

20

It has now been found that the piperidiny pyridazinone- pyrrolopyrimidinecarboxamide derivates compounds, which are described in greater details below, have surprising and particularly advantageous properties.

The invention relates to a compound of formula (1)

25

(1),

wherein

R1 represents a phenyl derivative of of formulae (a) or (b)

wherein

R2 is 1-4C-alkoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,

R3 is 1-4C-alkoxy, 3-5C-cycloalkoxy, 3-5C-cycloalkoxymethoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,

R4 is 1-4C-alkoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,

R5 is 1-4C-alkyl,

R6 is hydrogen or 1-4C-alkyl

or wherein R5 and R6 together and with inclusion of the two carbon atoms, to which they are bonded, form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring, optionally interrupted by an oxygen or sulphur atom,

R7 is hydrogen,

R8 is 1-4C alkyl,

or R7 and R8 together form a 3C- to 5C-alkylene group,

R9 is hydrogen or 1-4C alkyl,

or wherein R8 and R9 together and with inclusion of the carbon atom, to which they are bonded, form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring,

m is 1 or 2,

R10 is independently from each other hydrogen, 5-7C-cycloalkyl, 1-6C-alkyl, -CH(CH₃)-R11 or -CH₂-R12,

wherein

R11 is unsubstituted phenyl or hydroxyl,

R12 is hydroxyl, 5-7C-cycloalkyl, -N-(1-2C-alkyl)₂, -CH₂-S-(1-2C-alkyl), benzyl, unsubstituted phenyl, phenyl substituted by R13, phenyl substituted by R13 and R14,

wherein

R13 is halogen, 1-4C alkoxy, 1-6C alkyl, 1-4C fluoroalkyl, hydroxyl, phenyl, -C(O)NH₂ -CN, 2-oxoazetidin-1-yl or 2-oxopyrrolidin-1-yl,

R14 is halogen, 1-4C alkoxy, 1-6C alkyl, 1-4C fluoroalkyl, hydroxyl, phenyl, -C(O)NH₂ or -CN,

or R12 is a five membered or six-membered heterocyclic ring selected from imidazol-2-yl, imidazol-4-yl, pyrazol-1-yl, thiophen-2-yl, thiophen-3-yl, thiazol-2-yl, thiazol-4-yl, thi-

azol-5-yl, pyridin-2-yl, pyridin-3-yl, pyridin-4-yl, indol-2-yl, indol-3-yl, 1-methyl-indol-2-yl or 1-methyl-indol-3-yl, or

R12 is $-\text{CH}_2-\text{C}(\text{O})-\text{R15}$,

wherein

5 R15 is hydroxyl, $-\text{N}(\text{R16})_2$, piperidin-1-yl, pyrrolidin-1-yl or benzyloxy, wherein

R16 is independently from each other hydrogen or 1-4C-alkyl,

R17 is hydrogen or methyl,

R18 is $-\text{CH}_2-3-6\text{C-cycloalkyl}$,

10 R19 is halogen, hydroxyl, 1-4C alkoxy, 1-4C alkoxy predominantly or completely substituted by fluorine or 1-4C-fluoroalkyl,

R20 is halogen, hydroxyl, 1-4C alkoxy or 1-4C alkoxy predominantly or completely substituted by fluorine,

or R19 and R20 together form a 1-2C alkylenedioxy group

15 or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound.

1-6C-Alkyl is a straight-chain or branched alkyl group having 1 to 6 carbon atoms. Examples are n-hexyl, 2-methylhexyl, 3-methylpentyl, 2,2-dimethylbutyl, 2,3-dimethylbutyl, n-pentyl, 2-pentyl, 3-pentyl, 2-methylbutyl, 3-methylbutyl, 3-methylbut-2-yl, 2-methylbut-2-yl, 2,2-dimethylpropyl, butyl, isobutyl, 20 sec-butyl, tert-butyl, propyl, isopropyl, ethyl and methyl.

1-4C-Alkyl is a straight-chain or branched alkyl group having 1 to 4 carbon atoms. Examples are butyl, isobutyl, sec-butyl, tert-butyl, propyl, isopropyl, ethyl and methyl.

25 1-3C-Alkyl is a straight-chain or branched alkyl group having 1 to 3 carbon atoms. Examples are propyl, isopropyl, ethyl and methyl.

1-2C-Alkyl is a straight-chain alkyl group having 1 to 2 carbon atoms. Examples are ethyl and methyl.

30 1-4C-Alkoxy is a group which, in addition to the oxygen atom, contains a straight-chain or branched alkyl group having 1 to 4 carbon atoms. Alkoxy groups having 1 to 4 carbon atoms which may be mentioned in this context are, for example, butoxy, isobutoxy, sec-butoxy, tert-butoxy, propoxy, isopropoxy, ethoxy and methoxy.

35 1-2C-Alkoxy is a group, which in addition to the oxygen atom, contains a straight-chain alkyl group having 1 to 2 carbon atoms. Examples are ethoxy and methoxy.

1-2C-Alkylenedioxy represents, for example, the methylenedioxy $[-\text{O}-\text{CH}_2-\text{O}-]$ and the ethylenedioxy $[-\text{O}-\text{CH}_2-\text{CH}_2-\text{O}-]$ group.

1-4C-Alkoxy, which is completely or predominantly substituted by fluorine, is a group which, in addition to the oxygen atom, contains a straight-chain or branched alkyl group having 1 to 4 carbon atoms, wherein one or more of the hydrogen atoms of the alkyl group are replaced by fluorine. Examples include, but are not limited to, trifluoromethoxy, difluoromethoxy, fluoromethoxy, perfluoroethoxy, 1,1,1-trifluoro-2-fluoroethoxy, 1,1,1-trifluoroethoxy, 1,1-difluoro-2,2-difluoroethoxy, 1,1-difluoro-2-fluoroethoxy, 1,1-difluoroethoxy, 1-fluoro-2,2-difluoroethoxy, 1-fluoro-2-fluoroethoxy, 1-fluoroethoxy, 2,2-difluoroethoxy, 2-fluoroethoxy, 2,2,3,3,3-pentafluoropropoxy, n-perfluoropropoxy, and n-perfluorobutoxy group, of which the 1,1-difluoro-2,2-difluoroethoxy, the 1,1,1-trifluoroethoxy, the trifluoromethoxy and the fluoromethoxy group are preferred. Most preferred is the difluoromethoxy group.

10 Predominantly" in this connection means that more than half of the hydrogen atoms of the 1-4C-alkoxy group are replaced by fluorine atoms.

1-2C-Alkoxy, which is completely or predominantly substituted by fluorine, is a group which, in addition to the oxygen atom, contains a straight-chain or branched alkyl group having 1 to 2 carbon atoms, wherein one or more of the hydrogen atoms of the alkyl group are replaced by fluorine. Examples include, but are not limited to, perfluoroethoxy, 1,1-difluoro-2,2-difluoroethoxy, the 1,2,2-tetrafluoroethoxy, the 1,1,1-trifluoroethoxy, the trifluoromethoxy and the difluoromethoxy group, of which the difluoromethoxy group is preferred. "Predominantly" in this connection means that more than half of the hydrogen atoms of the 1-2C-alkoxy group are replaced by fluorine atoms.

20 1-4C Fluoroalkyl is a straight-chain or branched alkyl group having 1 to 4 carbon atoms, wherein one or more of the hydrogen atoms of the 1-4C alkyl group are replaced by fluorine. Examples include, but are not limited to, a trifluoromethyl, difluoromethyl, fluoromethyl, perfluoroethyl, 1,1,1-trifluoro-2-fluoroethyl, 1,1,1-trifluoroethyl, 1,1-difluoro-2,2-difluoroethyl, 1,1-difluoro-2-fluoroethyl, 1,1-difluoroethyl, 1-fluoro-2,2-difluoroethyl, 1-fluoro-2-fluoroethyl, 1-fluoroethyl, 2,2-difluoroethyl, 2-fluoroethyl, n-perfluoropropyl and n-perfluorobutyl group. Preferably, 1-4C-Fluoroalkyl is a straight-chain or branched alkyl group having 1 to 4 carbon atoms, wherein one to three of the hydrogen atoms of the 1-4C alkyl group are replaced by fluorine. Examples include, but are not limited to, a trifluoromethyl, difluoromethyl, fluoromethyl, perfluoroethyl, 1,1,1-trifluoroethyl, 1,1-difluoro-2-fluoroethyl, 1,1-difluoroethyl, 1-fluoro-2,2-difluoroethyl, 1-fluoro-2-fluoroethyl, 1-fluoroethyl, 2,2-difluoroethyl and 2-fluoroethyl group.

1-2C Fluoroalkyl is a straight-chain or branched alkyl group having 1 to 2 carbon atoms, wherein one or more of the hydrogen atoms of the 1-2C alkyl group are replaced by fluorine. Examples include, but are not limited to, a trifluoromethyl, difluoromethyl, fluoromethyl, perfluoroethyl, 1,1,1-trifluoro-2-fluoroethyl, 1,1,1-trifluoroethyl, 1,1-difluoro-2,2-difluoroethyl, 1,1-difluoro-2-fluoroethyl, 1,1-difluoroethyl, 1-fluoro-2,2-difluoroethyl, 1-fluoro-2-fluoroethyl, 1-fluoroethyl, 2,2-difluoroethyl and 2-fluoroethyl group. Preferably, 1-2C-Fluoroalkyl is a straight-chain or branched alkyl group having 1 to 2 carbon atoms, wherein one to three of the hydrogen atoms of the 1-2C alkyl group are replaced by fluorine. Examples include, but are not limited to, a trifluoromethyl, difluoromethyl, fluoromethyl, perfluoroethyl, 1,1,1-trifluoroethyl,

1,1-difluoro-2-fluoroethyl, 1,1-difluoroethyl, 1-fluoro-2,2-difluoroethyl, 1-fluoro-2-fluoroethyl, 1-fluoroethyl, 2,2-difluoroethyl and 2-fluoroethyl group.

3-5C-Cycloalkoxy stands for cyclopropyloxy, cyclobutyloxy or cyclopentyloxy.

- 5 3-5C-Cycloalkylmethoxy stands for cyclopropylmethoxy, cyclobutylmethoxy or cyclopentylmethoxy.

5-7C-cycloalkyl is a cycloalkyl group having 5 to 7 carbon atoms and stands for cyclopentyl, cyclohexyl or cycloheptyl, preferably cyclohexyl.

- 10 3-6C-cycloalkyl is a cycloalkyl group having 3 to 6 carbon atoms and stands for cyclopropyl, cyclobutyl, cyclopentyl or cyclohexyl. 3-5C-cycloalkyl is preferred standing for cyclopropyl, cyclobutyl or cyclopentyl, wherein 3-4C-cycloalkyl is more preferred standing for cyclopropyl and cyclobutyl. The most preferred cycloalkyl is the cyclopropyl.

- 15 Halogen stands for fluorine, chlorine, bromine or iodine, with fluorine, chlorine or bromine being preferred and with fluorine and chlorine being more preferred.

According to the definition of the $-(CH)_m-R_{10}$ group it is possible that this group is either derived from alpha-aminoacids such as phenylalanine, tyrosine, glycine, alanine, threonine or serine or from beta-aminoacids such as beta-alanine or beta-phenylalanine

20

- It is to be understood that, if R₁₂ represents a substituted phenyl ring, the substituent R₁₃ can be attached in 2-position, 3-position or 4-position to the phenyl ring. It is further to be understood that the substituents R₁₃ and R₁₄ of the phenyl ring can be attached in 2- and 3-position, in 2- and 4-position, in 2- and 5-position, in 2- and 6-position, 3- and 4- position, in 3- and 5-position and in 3- and 6-position to the phenyl ring. Preferably, the substituents R₁₃ and R₁₄ can be attached in 3- and 4-position, 3- and 5-position and in 2- and 4-position to the phenyl ring.
- 25

- If, R₁₂ represents a phenyl ring, which is substituted by R₁₃ or which is substituted by R₁₃ and 14, exemplary substituted phenyl rings, which may be mentioned, are 3-methyl-phenyl, 4-methyl-phenyl, 4-tert-butyl-phenyl, 4-biphenyl, 4-methoxy-phenyl, 4-ethoxy-phenyl, 2-trifluoromethyl-phenyl, 4-trifluoromethyl-phenyl, 2-chloro-phenyl, 3-chloro-phenyl, 4-chloro-phenyl, 4-fluoro-phenyl, 4-cyano-phenyl, 4-hydroxy-phenyl, 4-carboxamide-phenyl, 3,4-difluoro-phenyl, 3,5-difluoro-phenyl, 2,4-dichloro-phenyl or 3,4-dimethoxy-phenyl.
- 30

- It is further to be understood that the substituents R₁₉ and R₂₀ can be attached in 4- and 5-position and in 5- and 6-position to the phenyl ring, preferably R₁₉ and R₂₀ can be attached in 4- and 5-position to the phenyl ring. In case, R₁₉ and R₂₀ form a 1-2C-alkylenedioxygroup, this group can be attached in 4,5-position or in 5,6-position, preferably in 5,6-position, to the phenyl ring. This phenyl ring always has a $-O-CH_2-3-6C-cycloalkyl$ group of which the
- 35
- 40

–O-CH₂-cyclopropyl group is the most preferred one.

Exemplary phenyl rings substituted by R19 and R20, which may be listed are 2-(cyclopropyl-methoxy)-5-fluoro-4-methoxyphenyl, 2-(cyclopropylmethoxy)-4-fluoro-5-methoxyphenyl or 5-(cyclopropyl-methoxy)-1,3-benzodioxol-4-yl].

Salts of the compounds of formula (1) and the stereoisomers thereof include all inorganic and organic acid addition salts and salts with bases, especially all pharmaceutically acceptable inorganic and organic acid addition salts and salts with bases, particularly all pharmaceutically acceptable inorganic and organic acid addition salts and salts with bases customarily used in pharmacy.

Examples of acid addition salts include, but are not limited to, hydrochlorides, hydrobromides, phosphates, nitrates, sulfates, acetates, trifluoroacetates, citrates, gluconates including D-gluconates and L-gluconates, glucuronates including D-glucuronates and L-glucuronates, benzoates, 2-(4-hydroxybenzoyl)benzoates, butyrates, salicylates, sulfosalicylates, maleates, laurates, malates including L-malates and D-malates, lactates including L-lactates and D-lactates, fumarates, succinates, oxalates, tartarates including L-tartarates, D-tartarates and meso-tartarates, stearates, benzenesulfonates (besilates), toluenesulfonates (tosilates), methanesulfonates (mesilates), laurylsulfonates, 3-hydroxy-2-naphthoates, lactobionates (salts of 4-O-beta-D-galactopyranosyl-D-gluconic acid), galactarates, embonates and ascorbates.

Examples of salts with bases include, but are not limited to, lithium, sodium, potassium, calcium, aluminum, magnesium, titanium, ammonium, meglumine and guanidinium salts.

The salts include water-insoluble and, particularly, water-soluble salts.

The compounds of formula (1), the stereoisomers thereof, the salts of compounds of formula (1) or the stereoisomer thereof, may contain, e.g. when isolated in crystalline form, varying amounts of solvents. Included within the scope of the invention are, therefore, all solvates of the compounds of formula (1), the stereoisomers thereof, the salts of compounds of formula (1) and stereoisomers thereof. Hydrates are a preferred example of said solvates.

“Stereoisomer” as part of the phrase “or a stereoisomer of the compound” or of the phrase “or a stereoisomer of a salt of the compound” is meant to mean that the compounds of formula (1) have chiral centers in the positions 4a and 8a, in case R7 and R8 form together a 3C-5C alkylene group. In case, R1 represents a phenyl derivative of formula (b) there is one further chiral center in the dihydrofuran ring, if the substituents R5 and -CH₂-R6 are not identical. Compounds of formula (1) are preferred in which the hydrogen atoms in the positions 4a and 8a are cis-configured, more preferred are compounds of formula (1) in which the absolute configuration is S in the position 4a and R in the position 8a (according to the rules of Cahn, Ingold and Prelog).

The numbering of the ring system, if R7 and R8 form together a 3C-5C alkylene group is shown in the below formula (1*). The dotted ring depicts the possible ring closure of R7 and R8.

- 5 However, those compounds are preferred, in which the substituents R5 and -CH₂-R6 are identical or together and with inclusion of the two carbon atoms to which they are bonded form a spiro-connected 5-, 6- or 7-membered hydrocarbon ring.

Furthermore, the compounds of formula (1*) have an additional chiral center in position 2 and if, R10
10 represents a -CH(CH₃)-R11 group, a further chiral center is present.

All possible stereoisomers, i.e. pure diastereomers and pure enantiomers, as well as all mixtures thereof, independent from the ratio, including the racemates, are within the scope of the invention (re-
spectively within the scope of the particular claim).

15

In a preferred embodiment, the invention relates to a compound of formula (1), wherein

R1 represents a phenyl derivative of formulae (a) or (b),

wherein

- 20 R2 is 1-4C-alkoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,
R3 is 1-4C-alkoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,
R4 is 1-2C-alkoxy or 1-2C-alkoxy predominantly or completely substituted by fluorine,
R5 is 1-2C-alkyl,
R6 is hydrogen or 1-2C-alkyl,
or wherein R5 and R6 together and with inclusion of the two carbon atoms, to which they
25 are bonded, form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring,
R7 is hydrogen,
R8 is 1-4C alkyl,
or R7 and R8 together form a 3C- to 5C-alkylene group,
R9 is hydrogen or 1-4C alkyl,

or wherein R8 and R9 together and with inclusion of the carbon atom, to which they are bonded, form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring,

R10 is independently from each other hydrogen, 5-7C-cycloalkyl, 1-4C-alkyl, -CH(CH₃)-R11 or -CH₂-R12,

5 wherein

R11 is unsubstituted phenyl or hydroxyl,

R12 is hydroxyl, 5-7C-cycloalkyl, -N-(1-2C-alkyl)₂, -CH₂-S-(1-2C-alkyl), benzyl, unsubstituted phenyl, phenyl substituted by R13, phenyl substituted by R13 and R14, wherein

10 R13 is halogen, 1-4C alkoxy, 1-4C alkyl, 1-4C fluoroalkyl, hydroxyl, phenyl, -C(O)NH₂ -CN, 2-oxoazetidin-1-yl or 2-oxopyrrolidin-1-yl,

R14 is halogen, 1-4C alkoxy, 1-4C alkyl, 1-4C fluoroalkyl, hydroxyl, phenyl, -C(O)NH₂ or -CN,

15 or R12 is a five membered or six-membered heterocyclic ring selected from imidazol-2-yl, imidazol-4-yl, pyrazol-1-yl, thiophen-2-yl, thiophen-3-yl, thiazol-2-yl, thiazol-4-yl, thiazol-5-yl, pyridin-2-yl, pyridin-3-yl, pyridin-4-yl, indol-2-yl, indol-3-yl, 1-methyl-indol-2-yl or 1-methyl-indol-3-yl, or

R12 is -CH₂-C(O)-R15,

wherein

20 R15 is hydroxyl, -N(R16)₂, piperidin-1-yl, pyrrolidin-1-yl or benzyloxy, wherein

R16 is independently from each other hydrogen or 1-4C-alkyl,

R17 is hydrogen or methyl,

R18 is -CH₂-3-6C-cycloalkyl,

25 R19 is halogen, hydroxyl, 1-4C alkoxy, 1-4C alkoxy predominantly or completely substituted by fluorine or 1-4C-fluoroalkyl,

R20 is halogen, hydroxyl, 1-4C alkoxy or 1-4C alkoxy predominantly or completely substituted by fluorine,

or R19 and R20 together form a 1-2C alkylenedioxy group

30 or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound.

In another preferred embodiment, the invention relates to a compound of formula (1), wherein

R1 represents a phenyl derivative of of formulae (a) or (b),

wherein

35 R2 is 1-2C-alkoxy or 1-2C-alkoxy predominantly or completely substituted by fluorine,

R3 is 1-2C-alkoxy or 1-2C-alkoxy predominantly or completely substituted by fluorine,

R4 is 1-2C-alkoxy or 1-2C-alkoxy predominantly or completely substituted by fluorine,

R5 is 1-2C-alkyl,

R6 is hydrogen or 1-2C-alkyl,

or wherein R5 and R6 together and with inclusion of the two carbon atoms, to which they are bonded, form a spiro-linked 5- or 6- membered hydrocarbon ring,

R7 is hydrogen,

R8 is 1-2C alkyl,

5 or R7 and R8 together form a 3C- to 5C-alkylene group,

R9 is hydrogen or 1-2C alkyl,

or wherein R8 and R9 together and with inclusion of the carbon atom, to which they are bonded, form a spiro-linked 5- or 6- membered hydrocarbon ring,

m is 1 or 2,

10 R10 is independently from each other hydrogen, 5-7C-cycloalkyl, 1-4C-alkyl, -CH(CH₃)-R11 or -CH₂-R12,

wherein

R11 is unsubstituted phenyl or hydroxyl,

15 R12 is hydroxyl, 5-7C-cycloalkyl, -N-(1-2C-alkyl)₂, -CH₂-S-(1-2C-alkyl), benzyl, unsubstituted phenyl, phenyl substituted by R13, phenyl substituted by R13 and R14,

wherein

R13 is halogen, 1-4C alkoxy, 1-4C alkyl, 1-4C fluoroalkyl, hydroxyl, phenyl, -C(O)NH₂ -CN, 2-oxoazetidin-1-yl or 2-oxopyrrolidin-1-yl,

R14 is halogen or 1-4C alkoxy, 1-4C alkyl,

20 or R12 is a five membered or six-membered heterocyclic ring selected from imidazol-2-yl, imidazol-4-yl, pyrazol-1-yl, thiophen-2-yl, thiophen-3-yl, thiazol-2-yl, thiazol-4-yl, thiazol-5-yl, pyridin-2-yl, pyridin-3-yl, pyridin-4-yl, indol-2-yl, indol-3-yl, 1-methyl-indol-2-yl or 1-methyl-indol-3-yl, or

R12 is -CH₂-C(O)-R15,

25 wherein

R15 is hydroxyl, -N(R16)₂, piperidin-1-yl, pyrrolidin-1-yl or benzyloxy, wherein

R16 is independently from each other hydrogen or 1-3C-alkyl,

R17 is hydrogen or methyl,

R18 is -CH₂-3-5C-cycloalkyl,

30 R19 is halogen or 1-4C alkoxy,

R20 is halogen or 1-4C alkoxy,

or R19 and R20 together form a 1-2C alkylenedioxy group

or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound.

In yet another preferred embodiment, the invention relates to a compound of formula (1), wherein

R1 represents a phenyl derivative of of formulae (a) or (b),

wherein

R2 is methoxy,

40 R3 is methoxy,

- R4 is methoxy,
 R5 is methyl,
 R6 is hydrogen,
 R7 is hydrogen,
 5 R8 is 1-2C alkyl,
 or R7 and R8 together form a 3C- to 5C-alkylene group,
 R9 is hydrogen or 1-2C alkyl,
 or wherein R8 and R9 together and with inclusion of the carbon atom, to which they are bonded,
 form a spiro-linked 5- membered hydrocarbon ring,
 10 m is 1 or 2,
 R10 is independently from each other hydrogen, 5-7C-cycloalkyl, 1-4C-alkyl, -CH(CH₃)-R11 or
 -CH₂-R12,
 wherein
 R11 is unsubstituted phenyl or hydroxyl,
 15 R12 is hydroxyl, 5-7C-cycloalkyl, -N-(1-2C-alkyl)₂, -CH₂-S-(1-2C-alkyl), benzyl, unsubsti-
 tuted phenyl, phenyl substituted by R13, phenyl substituted by R13 and R14,
 wherein
 R13 is fluorine, chlorine, bromine, 1-2C alkoxy, 1-4C alkyl, 1-2C fluoroalkyl, hy-
 droxyl, phenyl, -C(O)NH₂ -CN, 2-oxoazetidin-1-yl or 2-oxopyrrolidin-1-yl,
 20 R14 is fluorine, chlorine, bromine or 1-2C alkoxy,
 or R12 is a five membered or six-membered heterocyclic ring selected from imidazol-2-yl,
 imidazol-4-yl, pyrazol-1-yl, thiophen-2-yl, thiophen-3-yl, thiazol-2-yl, thiazol-4-yl, thi-
 azol-5-yl, pyridin-2-yl, pyridin-3-yl, pyridin-4-yl, indol-2-yl, indol-3-yl, 1-methyl-indol-
 2-yl or 1-methyl-indol-3-yl, or
 25 R12 is -CH₂-C(O)-R15,
 wherein
 R15 is hydroxyl, -N(R16)₂, piperidin-1-yl, pyrrolidin-1-yl or benzyloxy, wherein
 R16 is independently from each other hydrogen or 1-3C-alkyl,
 R17 is hydrogen or methyl,
 30 R18 is -CH₂-3-4C-cycloalkyl,
 R19 is 1-2C alkoxy,
 R20 is fluorine, chlorine or bromine,
 or R19 and R20 together form a methylenedioxy group
 or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the com-
 35 pound.

In yet another preferred embodiment, the invention relates to a compound of formula (1), wherein

R1 represents a phenyl derivative of formulae (a) or (b),

wherein

40 R2 is methoxy,

- R3 is methoxy,
 R4 is methoxy,
 R5 is methyl,
 R6 is hydrogen,
 5 R7 is hydrogen,
 R8 is 1-2C alkyl,
 or R7 and R8 together form a 3C- or 4C-alkylene group,
 R9 is hydrogen or 1-2C alkyl,
 or wherein R8 and R9 together and with inclusion of the carbon atom, to which they are bonded,
 10 form a spiro-linked 5- membered hydrocarbon ring,
 m is 1 or 2,
 R10 is independently from each other hydrogen, cyclohexyl, 1-4C-alkyl, -CH(CH₃)-R11 or
 -CH₂-R12,
 wherein
 15 R11 is unsubstituted phenyl or hydroxyl,
 R12 is hydroxyl, cyclohexyl, -N-(CH₃)₂, -CH₂-S-CH₃, benzyl, unsubstituted phenyl, phenyl
 substituted by R13, phenyl substituted by R13 and R14,
 wherein
 R13 is fluorine, chlorine, 1-2C alkoxy, methyl, tert-butyl, trifluoromethyl, hydroxyl,
 20 phenyl, -C(O)NH₂, -CN, 2-oxoazetidin-1-yl or 2-oxopyrrolidin-1-yl,
 R14 is fluorine, chlorine or methoxy,
 or R12 is a five membered or six-membered heterocyclic ring selected from imidazol-2-yl,
 imidazol-4-yl, pyrazol-1-yl, thiophen-2-yl, thiophen-3-yl, thiazol-2-yl, thiazol-4-yl, thi-
 azol-5-yl, pyridin-2-yl, pyridin-3-yl, pyridin-4-yl, indol-2-yl, indol-3-yl, 1-methyl-indol-
 25 2-yl or 1-methyl-indol-3-yl, or
 R12 is -CH₂-C(O)-R15,
 wherein
 R15 is hydroxyl, -N(R16)₂, piperidin-1-yl, pyrrolidin-1-yl or benzyloxy, wherein
 R16 is independently from each other hydrogen or isopropyl,
 30 R17 is hydrogen or methyl,
 R18 is -CH₂-3C-cycloalkyl,
 R19 is methoxy,
 R20 is fluorine,
 or R19 and R20 together form a methylenedioxy group
 35 or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the com-
 pound.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is

1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen and R1, R10, R17, R18, R19 and R20 are as defined above.

5 In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen and R1 represents a phenyl derivative of formula (a), wherein R2 is 1-4C-alkoxy and R3 is 1-4C-alkoxy, and R10, R17, R18, R19 and R20 are as defined above.

10 In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 is 1-4C-alkoxy and R3 is 1-4C-alkoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 is 1-4C-alkoxy or halogen, R20 is 1-4C-alkoxy or halogen or R19 and R20 together form a 1-2C alkylenedioxy group and R10 and R17 are as defined above. Preferably, R2 represents 1-2C alkoxy, more preferably methoxy, R2 represents 1-2C alkoxy, more preferably methoxy, R16 represents $-\text{CH}_2\text{-cyclopropyl}$, R19 represents 1-2C alkoxy, preferably methoxy, or halogen, preferably fluorine, chlorine or bromine, more preferably fluorine, R20 represents 1-2C alkoxy, preferably methoxy, or halogen, preferably fluorine, chlorine or bromine, more preferably fluorine, or R19 and R20 preferably together form a methylenedioxy group and R10 and R17 are as defined above.

25 In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 and R3 are methoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 and R20 together form a methylenedioxy group, preferably attached in 5-, 6-position to the phenyl ring, R10 represents hydrogen, 1-6C-alkyl, 5-7C-cycloalkyl or $-\text{CH}(\text{CH}_3)\text{-R11}$, R11 is unsubstituted phenyl or hydroxyl and R17 is as defined above. If, R10 is 1-6C-alkyl, it is preferably methyl, ethyl, iso-propyl iso-butyl, sec-butyl or tert-butyl and if, R10 represents 5-7C-cycloalkyl it preferably is cyclohexyl.

35 In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 and R3 are methoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 and R20 together form a methylenedioxy group, preferably attached in 5-, 6-position to the phenyl ring, R10 is $-\text{CH}_2\text{-R12}$, wherein R12 represents hydroxyl, 5-7C-cycloalkyl, preferably cyclohexyl, $-\text{N}-(1\text{-}2\text{C-alkyl})_2$, preferably $-\text{N}(\text{CH}_3)_2$ or $-\text{CH}_2\text{-S}-(1\text{-}2\text{C-alkyl})$, preferably $-\text{CH}_2\text{-S-CH}_3$ or benzyl and R17 is as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 and R3 are methoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 and R20 together form a methylenedioxy group, preferably attached in 5-, 6-position to the phenyl ring, R10 is $-\text{CH}_2\text{-R12}$, wherein R12 is a five- or six-membered heterocyclic ring selected from imidazol-2-yl, imidazol-4-yl, pyrazol-1-yl, thiophen-2-yl, thiophen-3-yl, thiazol-2-yl, thiazol-4-yl, thiazol-5-yl, pyridin-2-yl, pyridin-3-yl, pyridin-4-yl, indol-2-yl, indol-3-yl, 1-methyl-indol-2-yl or 1-methyl-indol-3-yl, or R12 is $-\text{CH}_2\text{-C(O)-R15}$, wherein R15 is hydroxyl, $-\text{N(R16)}_2$, piperidin-1-yl, pyrrolidin-1-yl or benzyloxy, wherein R16 is independently from each other hydrogen or 1-4C-alkyl, preferably 1-3C-alkyl, more preferably isopropyl and R17 is as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 is methoxy and R3 is methoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 methoxy or fluorine, preferably fluorine, R20 represents methoxy or fluorine, preferably methoxy, or R19 and R20 together form a methylenedioxy group, preferably attached in 5-, 6-position to the phenyl ring, R10 is $-\text{CH}_2\text{-R12}$, wherein R12 represents unsubstituted phenyl and R17 is as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 and R3 are methoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 represents methoxy or fluorine, preferably fluorine, R20 represents methoxy or fluorine, preferably methoxy, or R19 and R20 together form a methylenedioxy group, preferably attached in 5-, 6-position to the phenyl ring, R10 is $-\text{CH}_2\text{-R12}$, wherein R12 represents phenyl either substituted by R13 or substituted by R13 and R14, wherein R13 and R14 as well as R17 are as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen, and R1 represents a phenyl derivative of formula (a), wherein R2 is methoxy and R3 is methoxy, R18 is $-\text{CH}_2\text{-cyclopropyl}$, R19 represents methoxy or fluorine, preferably fluorine, R20 represents methoxy or fluorine, preferably methoxy, or R19 and R20 together form a methylenedioxy group, preferably attached in 5-, 6-position to the phenyl ring, R10 is $-\text{CH}_2\text{-R12}$, wherein R12 represents phenyl either substituted by R13 or substituted by R13 and R14, and R17 is as defined above. If, R12 represents phenyl substituted by R13, R13 represents 1-2C alkoxy, 1-4C-alkyl, 1-2C-

fluoroalkyl, fluorine, chlorine, bromine, hydroxyl, phenyl, $-C(O)NH_2$ or $-CN$, preferably R13 represents 1-2C alkoxy, methyl, tert-butyl, trifluoromethyl, fluorine, chlorine, hydroxyl, phenyl, $-C(O)NH_2$, $-CN$, 2-oxoazetidin-1-yl or 2-oxopyrrolidinyl. If, R12 represents phenyl substituted by R13 and R14, R13 and R14 independently of each other represent 1-2C alkoxy, fluorine, chlorine or bromine, preferably methoxy, fluorine or chlorine, more preferably R13 and R14 are both methoxy, fluorine or chlorine.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1, R7 and R8 together form a 3C-4C-alkylene group, preferably a 4C-alkylene group, R9 is hydrogen and R1 represents a phenyl derivative of formula (b), wherein R4 is 1-4C-alkoxy, preferably 1-2C alkoxy, more preferably, methoxy, R5 is 1-4C-alkyl, preferably 1-2C alkyl, more preferably methyl, R6 is hydrogen or R5 and R6 together and with inclusion of the two carbon atoms, to which they are bonded, form a spiro-linked 5- or 6-membered hydrocarbon ring, preferably a spiro-linked 5-or 6-membered hydrocarbon ring, and R10, R17, R18, R19 and R20 are as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 is hydrogen, R8 and R9 are 1-2C-alkyl, R1 represents a phenyl derivative of formula (a), wherein R2 is 1-4C-alkoxy and R3 is 1-4C-alkoxy, and R10, R17, R18, R19 and R20 are as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 is hydrogen, R8 and R9 are 1-2C-alkyl, preferably methyl, R1 represents a phenyl derivative of formula (a), wherein R2 is 1-2C-alkoxy, preferably methoxy, and R3 is 1-2C-alkoxy, preferably methoxy, R10 is $-CH_2-R12$, wherein R12 either represents unsubstituted phenyl or phenyl substituted by R13, wherein R13 is halogen, preferably fluorine, chlorine or bromine, more preferably fluorine, R18 is $-CH_2$ -cyclopropyl, R19 represents 1-2C alkoxy, preferably methoxy, or halogen, preferably fluorine, chlorine or bromine, more preferably fluorine, R20 represents 1-2C alkoxy, preferably methoxy, or halogen, preferably fluorine, chlorine or bromine, more preferably fluorine, or R19 and R20 together form a methylenedioxy group, which is preferably attached in 5-, 6-position to the phenyl ring and R17 is as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 is hydrogen, R8 and R9 are 1-2C-alkyl, preferably methyl, R1 represents a phenyl derivative of formula (a), wherein R2 is 1-2C-alkoxy, preferably methoxy, and R3 is 1-2C-alkoxy, preferably methoxy, R10 is $-CH_2-R12$, wherein R12 represents 5-7C-cycloalkyl, preferably cyclohexyl, 1-4C-alkyl, preferably methyl or R12 is $-CH_2-C(O)-R15$, wherein R15 is $-N(R16)_2$ with R16 being independently from each other hydrogen or 1-4C-alkyl, preferably hydrogen or methyl, R18 is –

CH₂-cyclopropyl, R19 and R20 together form a methylenedioxy group, which is preferably attached in 5-, 6-position to the phenyl ring and R17 is as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 is hydrogen, R8 is 1-2C-alkyl, preferably methyl, R9 is 1-2C-alkyl, preferably methyl and R1 represents a phenyl derivative of formula (b), wherein R4 is 1-4C-alkoxy, preferably 1-2C alkoxy, more preferably methoxy, R5 is 1-4C-alkyl, preferably 1-2C alkyl, more preferably methyl, R6 is hydrogen or R5 and R6 together and with inclusion of the two carbon atoms, to which they are bonded, form a spiro-linked 5- or 6-membered hydrocarbon ring, preferably a spiro-linked 5-or 6-membered hydrocarbon ring, and R10, R17, R18, R19 and R20 are as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 is hydrogen, R8 is 1-2C-alkyl, preferably methyl, R9 is 1-2C-alkyl, preferably methyl and R1 represents a phenyl derivative of formula (b), wherein R4 is 1-4C-alkoxy, preferably 1-2C alkoxy, more preferably methoxy, R5 is 1-4C-alkyl, preferably 1-2C alkyl, more preferably methyl, R6 is hydrogen and R10 represents hydrogen, 1-4C-alkyl, preferably hydrogen or 1-2C-alkyl, more preferably hydrogen, or R10 is -CH₂-R12, wherein R12 is pyridin-2-yl, pyridin-3-yl or pyridin-4-yl, R18 is -CH₂-cyclopropyl, R19 and R20 together form a methylenedioxy group, which is preferably attached in 5-, 6-position to the phenyl ring and R17 is as defined above.

In a further preferred embodiment, the invention relates to a compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of the stereoisomer of the compound, wherein m is 1 or 2, preferably m is 1, R7 is hydrogen, R8 and R9 together and with inclusion of the carbon atom, to which they are bonded, form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring, preferably a spiro-linked 5-membered hydrocarbon ring, and R1 represents a phenyl derivative of formula (a), wherein R2 is 1-4C-alkoxy and R3 is 1-4C-alkoxy, R18 is -CH₂-cyclopropyl, R19 is 1-4C-alkoxy or halogen, R20 is 1-4C-alkoxy or halogen or R19 and R20 together form a 1-2C alkylendioxy group and R10 and R17 are as defined above. Preferably, R2 represents 1-2C alkoxy, more preferably methoxy, R2 represents 1-2C alkoxy, more preferably methoxy, R18 represents -CH₂-cyclopropyl, R19 and R20 together form a methylenedioxy group, R10 is hydrogen or -CH₂-R12, wherein R12 represents unsubstituted phenyl, pyridine-2-yl, pyridine-3-yl or pyridine-4-yl, preferably unsubstituted phenyl or pyridine-3-yl, and R17 is as defined above.

The compounds according to the invention can be prepared according to reaction schemes 1 to 3.

As shown in reaction scheme 1 the compounds of formula 1, wherein R1, R7, R8, R9, R10, R17, R18, R19 and R20 have the above-mentioned meanings can be prepared by coupling of a carboxylic acid compound of formula (3) with a primary amine compound of formula (2) using any standard amide

bond coupling method, such as for example the use of coupling agents such as HBTU, HATU, TOTU, COMU, T3P® or the use of activated acid compounds such as imidazolides. A review of suitable amide bond coupling methods can be found, for example, in C. A. G. N. Montalbetti, V. Falque, Tetrahedron, 61 (2005), 10827-10852 and in A. El-Faham, R. S. Funosas, R. Prohens, F. Albericio, Chemistry - A European Journal, 15 (2009), 9404-9416 and in J. Glauder, Speciality Chemicals Magazine, 24(2004), 30-31.

Reaction Scheme 1:

10

Compounds of the formula (1b), (1c) and (1e) also serve as starting materials for further reactions. The benzyl ester of compounds (1b) can be cleaved by hydrogenolysis which can be carried out according to standard methods known to the person skilled in the art, preferably using H₂ / Pd-C in an alcohol,

15

such as methanol or ethanol as a solvent at ambient temperature under atmospheric hydrogen pressure to give the corresponding carboxylic acid derivatives of formula (1c). Compounds of the formula (1d) can be prepared by coupling of a carboxylic acid compound of formula (1c) with a primary or secondary amine compound of formula (7) using any standard amide bond coupling method, such as for example the use of coupling agents such as HBTU, HATU, TOTU or COMU. An alternative synthesis route to compounds of the formula (1d) is described in scheme 2 and comprises the introduction of substituents R22 and R23 in intermediate (2) which can be reacted with (3) to the final compounds of formula (1d) according to scheme 1.

Compounds of the formula (1f) can be prepared via Palladium-catalyzed coupling of compounds (1e) and amides of the formula (8) using $\text{Pd}(\text{dba})_2$ as Palladium source, Xantphos as the ligand, Cs_2CO_3 as the base and 1,4-dioxane as the solvent at elevated temperatures (preferably at about 140 °C) and additionally, under microwave irradiation.

The preparation of carboxylic acid compounds of the formula (3) is described in WO2011/023693 and WO2009/106531 or can be prepared in analogy to methods described therein. In case, Q represents an imidazolyl the preparation of these compounds is known to a person skilled in the art.

Reaction scheme 2 illustrates the synthesis of compounds of the formula (2). In a first step compounds of the formula (4) are reacted with of the formula (5) using any standard amide bond coupling method, such as for example the use of coupling agents such as HBTU, HATU, TOTU, COMU, T3P[®] or the use of activated acid compounds such as imidazolides. A review of suitable amide bond coupling methods can be found, for example, in C. A. G. N. Montalbetti, V. Falque, Tetrahedron, 61 (2005), 10827-10852 and in A. El-Faham, R. S. Funosas, R. Prohens, F. Albericio, Chemistry - A European Journal, 15 (2009), 9404-9416 and in J. Glauder, Speciality Chemicals Magazine, 24(2004), 30-31. The primary amine of formula (2) can be prepared from the corresponding N-tert-butyloxycarbonyl protected compounds of formula (6) by using standard conditions for the removal of the tert-butyloxycarbonyl group, such as for example hydrogen chloride or trifluoroacetic acid in an appropriate solvent, such as dioxane, tetrahydrofuran or dichloromethane.

Compounds of the formula (5) are commercially available or can be prepared starting from commercially available precursors according to standard methods known to the person skilled in the art. N-Boc protected amino acids of formula (5c) can be synthesized in a two step sequence starting with an amide bond formation reaction of (5a) with a primary amine (14) using any standard amide bond coupling method, such as for example the use of coupling agents such as HBTU, HATU, TOTU or COMU followed by cleavage of the benzyl ester by hydrogenolysis which can be carried out according to standard methods known to the person skilled in the art, preferably using H_2 / Pd-C in an alcohol, such as methanol or ethanol as a solvent at ambient temperature under atmospheric hydrogen pressure.

Reaction Scheme 2:

5

The synthesis of intermediate (9) is depicted in scheme 3. Friedels-Crafts reaction of 1,2-dimethoxy benzene (10) with compound (11) in the presence of aluminium chloride yields γ -keto acid (12) which can be reacted with 4-hydrazinylpiperidine (13) to give compound (9).

- 10 The preparation of the compounds of the formula (4) is described in WO2005075457 and WO2005075456 or these compounds can be prepared in analogy to methods described therein.

Amide coupling reactions to compounds of the formula (6) and of the formula (1) may lead to mixtures of diastereomers or enantiomers under the reaction conditions used due to epimerization at the C-R10 stereogenic center.

15

Reaction scheme 3:

According to the definition of n and R10 it is possible that R10 is either derived from alpha-aminoacids such as phenylalanine, tyrosine, glycine, serine, alanine and threonine or from beta-aminoacids such as beta-alanine or beta-phenylalanine.

Suitable starting materials for the synthesis of R10 are N-(tert-butoxycarbonyl)-3,5-difluoro-D-phenylalanine, N-(tert-butoxycarbonyl)-3-methyl-L-phenylalanine, N-(tert-butoxycarbonyl)-4-tert-butyl-D-phenylalanine, N-(tert-butoxycarbonyl)-4-carbamoyl-D-phenylalanine, N-(tert-butoxycarbonyl)-4-carbamoyl-D-phenylalanine, N-(tert-butoxycarbonyl)-O-ethyl-D-tyrosine, (2R)-3-(biphenyl-4-yl)-2-[(tert-butoxycarbonyl)amino]propanoic acid, N-(tert-butoxycarbonyl)-4-cyano-D-phenylalanine, N-(tert-butoxycarbonyl)-4-methyl-D-phenylalanine, N-(tert-butoxycarbonyl)-3-methyl-D-phenylalanine, N-(tert-butoxycarbonyl)-3,4-difluoro-D-phenylalanine, N-(tert-butoxycarbonyl)-3-methoxy-O-methyl-L-tyrosine, N-(tert-butoxycarbonyl)-4-chloro-D-phenylalanine, N-(tert-butoxycarbonyl)-4-fluoro-D-phenylalanine, N-(tert-butoxycarbonyl)-O-methyl-D-tyrosine, N-(tert-butoxycarbonyl)-3-chloro-D-phenylalanine, N-(tert-butoxycarbonyl)-D-phenylalanine, N-(tert-butoxycarbonyl)-2-(trifluoromethyl)-D-phenylalanine, N-(tert-butoxycarbonyl)-2-chloro-D-phenylalanine, N-(tert-butoxycarbonyl)-L-phenylalanine, (betaR)-N-(tert-butoxycarbonyl)-beta-methyl-D-phenylalanine, N-(tert-butoxycarbonyl)-3-pyridin-2-yl-L-alanine, N-(tert-butoxycarbonyl)-3-pyridin-4-yl-L-alanine, N-(tert-butoxycarbonyl)-3-pyridin-3-yl-L-alanine, N-(tert-butoxycarbonyl)-4-fluoro-L-phenylalanine, N-(tert-butoxycarbonyl)-2,4-dichloro-D-phenylalanine, N-(tert-butoxycarbonyl)-4-(trifluoromethyl)-D-phenylalanine, N-(tert-butoxycarbonyl)-D-tyrosine, N-(tert-butoxycarbonyl)-L-tyrosine, N-(tert-butoxycarbonyl)-2-chloro-L-phenylalanine, N-(tert-butoxycarbonyl)-O-methyl-D-tyrosine, N-(tert-butoxycarbonyl)glycine, N-(tert-butoxycarbonyl)-L-serine, N-(tert-butoxycarbonyl)-L-alanine, N-(tert-butoxycarbonyl)-D-alanine, N-(tert-butoxycarbonyl)-D-threonine, (2S)-2-[(tert-butoxycarbonyl)amino]butanoic acid and (2R)-2-[(tert-butoxycarbonyl)amino]-4-phenylbutanoic acid.

It is known to the person skilled in the art that, if there are a number of reactive centers on a starting or intermediate compound, it may be necessary to block one or more reactive centers temporarily by protective groups in order to allow a reaction to proceed specifically at the desired reaction center. A
5 detailed description for the use of a large number of proven protective groups is found, for example, in T. W. Greene, Protective Groups in Organic Synthesis, John Wiley & Sons, 1999, 3rd Ed., or in P. Kocienski, Protecting Groups, Thieme Medical Publishers, 2000.

10 The compounds according to the invention are isolated and purified in a manner known per se, e.g. by distilling off the solvent in vacuo and recrystallizing the residue obtained from a suitable solvent or subjecting it to one of the customary purification methods, such as column chromatography on a suitable support material.

15 As will be appreciated by persons skilled in the art, the invention is not limited to the particular embodiments described herein, but covers all modifications that are within the spirit and scope of the invention as defined by the appended claims.

The following examples illustrate the invention in greater detail, without restricting it. Further
20 compounds according to the invention, of which the preparation is not explicitly described, can be prepared in an analogous way.

The compounds, which are mentioned in the examples, represent preferred embodiments of the invention.

- Unless otherwise stated compound purification is achieved by flash column chromatography, preparative TLC and preparative HPLC. HPLC purifications are carried out using a Phenomenex Gemini 5 μ m C18 (75 x 30 mm) or a Phenomenex Gemini 5 μ m C6-Phenyl (75 x 30 mm) or a Phenomenex Gemini 5 μ m C18 Axia (75 x 30 mm) column, a binary gradient (solvent A: water, solvent B: acetonitrile), a flow rate of 40 ml/min, formic acid as a buffer or a buffer system consisting of formic acid and ammonium formate and UV detection at 240 nm.

- 25 As used herein the term "e.e." or "enantiomeric excess" refers to the percent by which one enantiomer, E1 is in excess in a mixture of both enantiomers (E1+E2), as calculated by the equation, $[(E1-E2)/(E1+E2)] \times 100\% = \text{e.e.}$

- 30 The enantiomeric excess (e.e.) was determined by HPLC using a Chiralcel OD-RH (150 x 4.6 mm) column [mobile phase: 100mM KPF6 pH=2 / acetonitrile (70/30)], a flow rate of 0.6 ml / min and UV detection at 220 & 316 nm.

- All mass spectra are obtained using ESI technique. HRMS data of examples 1 to 125 are reported as MH^+ .

10 To a mixture of 4-[5-(cyclopropylmethoxy)-1,3-benzodioxol-4-yl]-5H-pyrrolo[3,2-d]pyrimidine-7-carboxylic acid (110 mg; compound B71) and DIPEA (0.20 ml) in DCM (3 ml) was added (4aS,8aR)-2-{1-[(2R)-2-amino-3-(3,5-difluorophenyl)propanoyl]piperidin-4-yl}-4-(3,4-dimethoxyphenyl)-4a,5,6,7,8,8a-hexahydrophthalazin-1(2H)-one (172 mg; compound B14) and COMU (146 mg) and the reaction mixture was stirred for 4 h at RT. Afterwards a half-saturated aqueous sodium bicarbonate solution was
15 added and the mixture was extracted twice with DCM. The combined organic phases were dried over magnesium sulphate and the organic layer was concentrated under reduced pressure. The resulting residue was purified twice by flash column chromatography [1) amino phase silica gel, eluent: EtOAc / MeOH, 98/2 (v/v); 2) silica gel, eluent: DCM / MeOH, 98/2 (v/v)]. After lyophilisation from acetonitrile / water the title compound was obtained as a solid.

Additional COMU (214 mg) was added and the reaction mixture was stirred for another 1.5 h at RT. The mixture was extracted with saturated aqueous sodium bicarbonate solution (3x5 ml) and filtered using a phase separator. The organic layer was concentrated under vacuo and the resulting residue was purified by flash column chromatography [amino phase silica gel, elution gradient: Cyclohexane/EtOAc/MeOH, 100/0/0 to 0/100/0 to 0/94/6 (v/v/v)]. After lyophilisation from acetonitrile / water (5/1 (v/v)) the title compound was obtained as a solid.

To a suspension of 4-[5-(cyclopropylmethoxy)-1,3-benzodioxol-4-yl]-5H-pyrrolo[3,2-d]pyrimidine-7-carboxylic acid (2.47 g; compound B71) (4aS,8aR)-2-{1-[(2S,3R)-2-amino-3-hydroxybutanoyl]piperidin-4-yl}-4-(3,4-dimethoxyphenyl)-4a,5,6,7,8,8a-hexahydrophthalazin-1(2H)-one hydrochloride (3.31 g; compound B2) and HBTU (2.92 g) in DCM (50 ml) was added DIPEA (4.9 ml) and the reaction mixture was stirred for 30 min at RT. Afterwards a saturated aqueous sodium bicarbonate solution (20 ml) was added to the mixture, the organic phase was separated, dried over sodium sulphate and concentrated under reduced pressure. The resulting residue was purified twice by flash column chromatography [amino phase silica gel, elution gradient: EtOAc/MeOH, 95/5 to 90/10 (v/v)]. The product containing fractions were collected, the solvent was removed under vacuo and the residue was treated with ethyl ether. The suspension was filtered off and the filter cake was dried under vacuo to give the title compound as a solid.

Afterwards additional COMU (50 mg) was added to the reaction mixture and stirring was continued for 12 h in order to complete the reaction. Then a half-saturated aqueous sodium bicarbonate solution was added and the mixture was extracted several times with DCM. The combined organic phases were dried over magnesium sulphate and the organic layer was concentrated under reduced pressure. The resulting residue was purified by flash column chromatography [amino phase silica gel, eluent: EtOAc/MeOH, 98/2 (v/v) and afterwards by preparative HPLC to give the title compound as a solid.

B20. (4aS,8aR)-2-{1-[(2R)-2-amino-3-(4-chlorophenyl)propanoyl]piperidin-4-yl}-4-(3,4-dimethoxyphenyl)-4a,5,6,7,8,8a-hexahydrophthalazin-1(2H)-one

To a solution of tert-Butyl [(2R)-3-(4-chlorophenyl)-1-{4-[(4aS,8aR)-4-(3,4-dimethoxyphenyl)-1-oxo-4a,5,6,7,8,8a-hexahydrophthalazin-2(1H)-yl]piperidin-1-yl}-1-oxopropan-2-yl]carbamate (2.17 g; compound B36) in THF (40 ml) was added an aqueous solution of hydrogen chloride (8.31 ml, 2.0 M) and the reaction mixture was stirred for 90 min at RT and afterwards for 2 h at 65 °C and again for 12 h at RT. Since reaction control by LC-MS indicates presence of starting material tert-Butyl [(2R)-3-(4-chlorophenyl)-1-{4-[(4aS,8aR)-4-(3,4-dimethoxyphenyl)-1-oxo-4a,5,6,7,8,8a-hexahydrophthalazin-2(1H)-yl]piperidin-1-yl}-1-oxopropan-2-yl]carbamate (ca 30 %) the reaction mixture was stirred another 9 h at 65 °C and after further addition of a concentrated solution of hydrogen chloride (2x1ml, 10.0 M) and stirring for 2x45 min at room temperature the reaction was completed. The organic solvent was removed under reduced pressure, DCM (100 ml) and water (50 ml) were added and the mixture was alkalinized to pH 14 by addition of an aqueous solution of sodium hydroxide (5M). The mixture was extracted with DCM (5x100 ml), the organic layers were combined and dried over sodium sulphate. After evaporation of all volatiles under vacuo the title compound was obtained as a solid.

B173. 7-{1-[(2R)-2-amino-3-phenylpropanoyl]piperidin-4-yl}-9-(3,4-dimethoxyphenyl)-7,8-diazaspiro[4.5]dec-8-en-6-one

tert-Butyl [(2R)-1-{4-[9-(3,4-dimethoxyphenyl)-6-oxo-7,8-diazaspiro[4.5]dec-8-en-7-yl]piperidin-1-yl}-1-oxo-3-phenylpropan-2-yl]carbamate (1.72 g; compound B174) was dissolved in a solution of hydrogen chloride in 1,4-dioxane (10.4 ml, 4.0 M) and the reaction mixture was stirred for 45 min at RT. DCM (20 ml) was added and the mixture was sequentially extracted with an aqueous hydrochloric acid solution (2M) and with sodium hydroxide (15 ml, 1M). The organic phase was separated, evaporated under vacuo and the resulting residue was purified by flash column chromatography [amino phase silica gel, elution gradient: Cyclohexane to EtOAc to EtOAc/MeOH 9/1 (v/v)] to give the title compound as an oil.

B174. tert-Butyl [(2R)-1-{4-[9-(3,4-dimethoxyphenyl)-6-oxo-7,8-diazaspiro[4.5]dec-8-en-7-yl]piperidin-1-yl}-1-oxo-3-phenylpropan-2-yl]carbamate

To a mixture of N-(tert-butoxycarbonyl)-D-phenylalanine (1.02 g) and DIPEA (1.36 g) in DCM (15 ml) was added HBTU (1.66 g) and 9-(3,4-dimethoxyphenyl)-7-(piperidin-4-yl)-7,8-diazaspiro[4.5]dec-8-en-6-one hydrochloride (1.43 g; compound B115) and the mixture was stirred for 1 h at RT. The mixture was extracted with saturated aqueous sodium bicarbonate solution (3x5 ml) and the organic phase was separated, dried over magnesium sulphate and concentrated under reduced pressure. The resulting residue was purified by flash column chromatography [amino phase silica gel, elution gradient: EtOAc/n-hexane, 70/30 to 100/0 (v/v)] to give the title compound as a solid.

B175. 7-{1-[(2S)-2-amino-3-(pyridin-3-yl)propanoyl]piperidin-4-yl}-9-(3,4-dimethoxyphenyl)-7,8-diazaspiro[4.5]dec-8-en-6-one

To a solution of tert-Butyl [(2S)-1-{4-[9-(3,4-dimethoxyphenyl)-6-oxo-7,8-diazaspiro[4.5]dec-8-en-7-yl]piperidin-1-yl}-1-oxo-3-(pyridin-3-yl)propan-2-yl]carbamate (1.13 g; compound B117) in DCM (11 ml)

was added trifluoroacetic acid (11 ml) and the reaction mixture was stirred for 1 h at RT. The mixture was slowly poured in a saturated aqueous sodium bicarbonate solution. After extraction with DCM, the combined organic layers were dried over magnesium sulphate and all solvents were removed under reduced pressure. After lyophilisation from acetonitrile / water the title compound was obtained as a solid.

Commercial Utility

Medical Uses

- 5 The compounds of formula (1) and the stereoisomers of the compounds of formula (1) according to the invention are hereinafter referred to as the compounds of the invention. In particular, the compounds of the invention are pharmaceutically acceptable.

- 10 The compounds of the invention have – as dual-selective type 4/type 5 phosphodiesterase (PDE4/5) inhibitors - valuable pharmaceutical properties, which make them commercially utilizable.

- PDE4 inhibitors are thought to be useful in the treatment or prophylaxis of a variety of diseases and disorders. They are thought to be suitable on the one hand as bronchial therapeutics (for the treatment of airway obstructions on account of their effects to curb pulmonary inflammation, lung fibrotic remodeling, lung parenchymal destruction, mucociliary malfunction, oxidative stress, pulmonary vascular remodeling), but on the other hand especially for the treatment of disorders, in particular of an inflammatory nature, e.g. of the airways, of the skin, of the intestine, of the eyes, of the CNS and of the joints, which are mediated by mediators such as histamine, PAF (platelet-activating factor), arachidonic acid derivatives such as leukotrienes and prostaglandins, cytokines, interleukins, chemokines, alpha-, beta- and gamma-interferon, tumor necrosis factor α (TNF α) or oxygen free radicals and proteases.

- In particular, PDE4 inhibitors are thought to be useful in the treatment or prophylaxis of a variety of diseases and disorders, such as for example:
- acute and chronic airway diseases, such as, but not limited to, chronic bronchitis, allergic bronchitis, bronchial asthma, emphysema, COPD (chronic obstructive pulmonary disease), bronchiolitis obliterans (BOS) and interstitial lung disease such as pulmonary fibrosis;
- pulmonary hypertension;
- diseases which are based on allergic and/or chronic, immunological false reactions in the region of the upper airways (pharynx, nose) and the adjacent regions (paranasal sinuses, eyes), such as, but not limited to, allergic rhinitis/sinusitis, chronic rhinitis/sinusitis, allergic conjunctivitis and also nasal polyps;
- ocular inflammatory diseases such as, but not limited to, uveitis, scleritis, keratitis, retinal vasculitis, age-related macula degeneration, diabetic nephropathy, and chronic and allergic conjunctivitis;
- dermatological diseases especially of proliferative, inflammatory and allergic type, such as, but not limited to psoriasis (vulgaris), toxic and allergic contact eczema, atopic dermatitis (eczema), seborrhoeic eczema, Lichen simplex, sunburn, pruritus in the anogenital area, alopecia areata, hypertrophic scars, discoid lupus erythematosus, follicular and widespread pyoderms, endogenous and exogenous acne, acne rosacea and other proliferative, inflammatory and allergic skin disorders;
- diseases to which excessive release of TNF α and leukotrienes may contribute, such as, for example, diseases of the arthritis type like rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis and other arthritic conditions;

- fibrotic diseases, such as, but not limited to, cystic fibrosis, pulmonary fibrosis, hepatic fibrosis renal fibrosis, myelofibrosis, retroperitoneal fibrosis, endomyocardial fibrosis, mediastinal fibrosis, nephrogenic systemic fibrosis, hypertrophic scars or toxic liver damage;
viral, alcoholic or drug-induced acute and fulminant hepatitis, hepatic steatosis (alcoholic and non-alcoholic steatosis-hepatitis);
- 5 diseases of the immune system, such as, but not limited to, AIDS, multiple sclerosis, graft versus host reaction, acute allograft rejections, but also chronic graft versus host disease (CGVHD) after allogeneic hematopoietic stem-cells transplantation (HSCT);
cachexia, cancer cachexia, AIDS cachexia;
- 10 types of shock, such as, but not limited to, septic shock, endotoxin shock, gram-negative sepsis, toxic shock syndrome and ARDS (adult respiratory distress syndrome);
diseases in the gastrointestinal region, such as Crohn's disease and ulcerative colitis;
diseases of the heart which can be treated by PDE inhibitors, such as cardiac insufficiency;
diseases which can be treated on account of the tissue-relaxant action of the PDE4 inhibitors, such as,
- 15 for example, oncolytic action (to treat preterm delivery);
renal diseases such as nephritis such as glomerulonephritis, diabetic nephropathy and urinary tract infections;
diabetes insipidus, diabetes mellitus (type I and in particular type II); cancer (in particular lymphoid and myeloid leukaemia); osteoporosis;
- 20 conditions associated with cerebral metabolic inhibition, such as, but not limited to, cerebral senility, senile dementia (Alzheimer's disease), memory impairment associated with Parkinson's disease or multiinfarct dementia;
and also diseases of the central nervous system, such as, but not limited to, depressions, anxiety states, spinal cord injury, schizophrenia or arteriosclerotic dementia.
- 25 PDE5 inhibitors are thought to be able to influence the physiological and pathophysiological function of various cells, e.g., but not limited to, smooth muscle cells, fibroblasts, myofibroblasts and platelets, which are involved in a great variety of physiological and pathophysiological mechanisms. In particular, PDE5 inhibitors are thought to be able to effect relaxation of the vasculature, thus increasing blood
- 30 flow, induce neurogenesis, inhibit platelet function, such as aggregation, adhesion and mediator release and, thus, have an anti-inflammatory effect.

- In particular, PDE5 inhibitors are thought to be useful in the treatment or prophylaxis of a variety of diseases and disorders, such as for example:
- 35 male and female sexual dysfunction, such as, but not limited to, male erectile dysfunction, premature ejaculation, Peyronie's disease;
acute and chronic airway diseases, such as, but not limited to, COPD (chronic obstructive pulmonary disease), bronchitis, emphysema, pulmonary vascular remodeling, interstitial lung disease such as idiopathic pulmonary lung fibrosis (IPF), asthma, cystic fibrosis, bronchiectasis, bronchiolitis obliterans,

connective tissue diseases, sarcoidosis, kyphoscoliosis, pneumoconiosis, amyotrophic lateral sclerosis, thoracoplasty, extrinsic allergic alveolitis;
pulmonary hypertension;
inflammatory diseases, such as, but not limited to, vasculature inflammation, acute respiratory distress
5 syndrome, nephritis, mesangial glomerulonephritis, chronic inflammatory bowel disease, disseminated
intravascular inflammation, allergic vasculitis, dermatoses (e.g., but not limited to, psoriasis, toxic and
allergic contact eczema, atopic eczema, seborrheic eczema, Lichen simplex, sunburn, pruritus in the
anogenital area, alopecia areata, hypertrophic scars, discoid lupus erythematosus, follicular and
widespread pyoderms, endogenous and exogenous acne, acne rosacea), disorders of the arthritis
10 type (e.g., but not limited to, rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis), disorders of
the immune system [e.g., but not limited to, AIDS (acquired immunodeficiency syndrome), multiple
sclerosis], graft versus host reaction, allograft rejections, shock [e.g., but not limited to, septic shock,
endotoxin shock, gram-negative sepsis shock, toxic shock syndrome and ARDS (adult respiratory
distress syndrome)], gastrointestinal inflammations (e.g., but not limited to, Crohn's disease and
15 ulcerative colitis); disorders which are based on allergic and/or chronic, immunological false reactions
(e.g., but not limited to, allergic rhinitis, allergic sinusitis, chronic rhinitis, chronic sinusitis, allergic
conjunctivitis, nasal polyps);
pain, such as, but not limited to, inflammatory pain;
right-heart failure, right heart hypertrophy (cor pulmonale), hypertension, hypercholesterolemia,
20 hypertriglyceridemia; diabetes mellitus (type I and type II);
ischaemic diseases, such as, but not limited to, stroke, coronary artery disease, angina (including, but
not limited to, vasospastic angina), myocardial infarction, peripheral artery disease, cerebrovascular
obstruction, sleep apnea, macular ischaemia, arterial and venous occlusion, congestive heart failure;
ocular inflammatory diseases such as, but not limited to, uveitis, scleritis, keratitis, retinal vasculitis,
25 age-related macula degeneration, diabetic nephropathy, and chronic and allergic conjunctivitis;
diabetic gastroparesis and diseases with symptoms of gastroparesis;
diseases or conditions in which it is desirable to suppress platelet function, for example, but not limited
to, after stent implantations (e.g., but not limited to, coronary stenting), after bypass operations, in
pulmonary hypertension, thrombotic diseases, post-angioplasty stenosis, coronary artery disease,
30 infarction (e.g., but not limited to, myocardial infarction), instable angina pectoris, stroke, and arterial
and venous occlusion diseases (e.g., but not limited to, claudicatio intermittens);
diseases or conditions with an impairment or dysfunction of cerebral vascular reactivity and/or
neurovascular coupling, such as, but not limited to, arteriosclerotic dementia, multi-infarct dementia,
cerebral senility;
35 diseases which are based on neuronal damage or degradation, such as but not limited to, stroke,
spinal cord injury, brain injury, morbus parkinson, amyotrophic lateral sclerosis, morbus alzheimer,
amyloidosis, prion diseases and neuropathy;
peripheral arterial diseases, chronic renal failure, chronic heart failure, sepsis, senile dementia
(Alzheimer's disease), Creutzfeld-Jacob disease, septic encephalopathy, arteriosclerotic

encephalopathy, diabetes associated encephalopathy, toxic encephalopathy, vascular and neuronal dementia, Huntington's disease, Parkinson's disease, multiple sclerosis and preeclampsia; portal hypertension, liver cirrhosis, toxic liver damage (e.g., but not limited to, alcohol-induced liver damage), hepatitis, thrombosis of the portal vein, Budd-Chiari syndrome, malformation of liver veins, compression of liver veins (e.g., but without limitation, due to tumors), arteriovenous fistula, diseases associated with an enlarged spleen, schistosomiasis (bilharziosis), sarcoidosis and other granulomatous diseases, primary biliary cirrhosis, myeloproliferative disorders (e.g., but not limited to, chronic myeloid leukemia, osteomyelofibrosis), lymphatic systemic diseases, collagenosis (e.g., but not limited to, systemic lupus erythematosus, scleroderma), morbus Osler (congenital arteriovenous malformations, inter alia in the liver), nodular regenerative hyperplasia, tricuspid insufficiency, pericarditis constrictiva, veno-occlusive disease (VOD), non-alcoholic steatohepatitis (NASH); fibrotic diseases, such as, but not limited to, cystic fibrosis, pulmonary fibrosis, hepatic fibrosis renal fibrosis, myelofibrosis, retroperitoneal fibrosis, endomyocardial fibrosis, mediastinal fibrosis, nephrogenic systemic fibrosis, hypertrophic scars or toxic liver damage; benign prostatic hyperplasia; insufficient uteroplacental blood flow in pregnancies with fetal growth restriction; insufficient brain skills, such as but not limited to, verbal attainment, attention, concentration, deductive thinking, central auditory processing, cognition, learning, vigilance, apprehension and reactivity; Overactive Bladder; LUTS = lower urinary tract symptoms; Raynauds syndrome/phenomenon.

20

In this respect, the term "pulmonary hypertension" in particular embraces

- pulmonary arterial hypertension including primary pulmonary hypertension (e.g. sporadic or familial) and pulmonary arterial hypertension related, for example, but without limitation, to collagen vascular disease, congenital systemic-to-pulmonary shunts, portal hypertension, human immunodeficiency virus infection, drugs or toxins (e.g., but not limited to, anorexigens), persistent pulmonary hypertension of the newborn;
- pulmonary venous hypertension due to, for example, but without limitation, left-sided atrial or ventricular heart disease, left-sided valvular heart disease, extrinsic compression of central pulmonary veins (e.g. fibrosing mediastinitis, adenopathy in relation to tumors), pulmonary veno-occlusive disease;
- pulmonary hypertension associated with disorders of the respiratory system or hypoxemia including, for example, but without limitation, chronic obstructive pulmonary disease (COPD), interstitial lung disease, sleep-disordered breathing, alveolar hypoventilation disorders, chronic exposure to high altitude, neonatal lung disease, alveolar-capillary dysplasia;
- pulmonary hypertension caused by chronic thrombotic or embolic diseases including thromboembolic obstruction of proximal pulmonary arteries and obstruction of distal pulmonary arteries, such as pulmonary embolism (due to thrombus, tumor, ova, parasites, or foreign material), in situ thrombosis and sickle-cell disease, in particular chronic thromboembolic pulmonary hypertension (CTEPH);

- pulmonary hypertension caused by disorders directly affecting the pulmonary vasculature including inflammatory disorders (e.g., but not limited to, schistosomiasis, sarcoidosis) and pulmonary capillary hemangiomatosis.

5 It is noteworthy that compounds of the invention, which are inhibitors of type 4 phosphodiesterase (PDE4) and of type 5 phosphodiesterase (PDE5), have the potential to be more effective in treatment of distinct disease identities than compounds inhibiting only one of those two enzymes, since inhibition of PDE4 and PDE5 might address diverse and different pathophysiologies occurring within one disease state as e.g. lung fibrosis.

10 In respect to lung fibrosis it has been described that inhibitors of type 4 phosphodiesterase inhibit TGF- β induced transition of lung fibroblasts to myofibroblasts (Dunkern et al., Eur. J. Pharmacol., 572(1): 12-22, 2007; Sabatini et al., Pulm Pharmacol Ther 23: 283-91, 2010), which is a hallmark of fibrosis progression. They have further been described to inhibit matrix metalloproteinase production from lung fibroblasts (Martin-Chouly CA et al., Life Sci. 75(7): 823-40, 2004) and to prevent chemotaxis as well
15 as collagen gel contraction by these cells (Kohyama T et al., Am. J. Respir. Cell Mol. Biol., 26(6): 694-701, 2002; Togo et al., Am J Physiol Lung Cell Mol Physiol 296: L959-69, 2009), which are important pathophysiological aspects of lung fibrosis. In addition the selective type 4 phosphodiesterase inhibitor roflumilast was shown to alleviate bleomycin-induced lung fibrotic remodeling in mice and rat in preventive and therapeutic protocols outperforming glucocorticoids in the latter to inhibit fibrosis
20 development (Cortijo J et al., Br. J. Pharmacol., 156(3): 534-44, 2009).

On the other hand it has been shown in respect to lung fibrosis that PDE5 inhibition by means of the selective PDE5 inhibitor sildenafil attenuates bleomycin-induced pulmonary fibrosis and pulmonary hypertension through inhibition of ROS generation and RhoA/Rho kinase activation (Hemnes AR, Zaiman A, Champion HC, Am. J. Physiol. Lung Cell. Mol. Physiol. 2008 Jan;294(1):L24-33. Epub 2007
25 Oct 26) and it has been shown in clinical human open-label trials that sildenafil improves lung hemodynamic parameters (vascular resistance and ventilation/perfusion matching) and increases exercise tolerance in patients with pulmonary fibrosis (Ghofrani et al., Lancet 360, 895-900, 2002; Collard et al., Chest 131, 897-899, 2007).

30 Accordingly, the invention further relates to the compounds of the invention for use in the treatment or prophylaxis of diseases, especially diseases alleviated by inhibition of type 4 and type 5 phosphodiesterase, in particular the diseases exemplified above.

Preferably, the invention relates to the compounds of the invention for use in the treatment or
35 prophylaxis of the following diseases:

acute and chronic airway diseases, such as interstitial lung disease such as pulmonary fibrosis, cystic fibrosis, bronchial asthma, chronic bronchitis, allergic bronchitis, allergic rhinitis, emphysema, chronic obstructive pulmonary disease (COPD) and COPD associated with pulmonary hypertension;
pulmonary hypertension, in particular thromboembolic pulmonary hypertension;
40 dermatological diseases, such as psoriasis and atopic dermatitis (eczema);

ocular diseases, such as uveitis, scleritis, keratitis, retinal vasculitis, age-related macula degeneration, diabetic nephropathy, and chronic and allergic conjunctivitis; rheumatoid arthritis; and inflammations in the gastrointestinal region, such as Crohn's disease and ulcerative colitis.

5

The invention also relates to the use of a compound of the invention in the manufacture of a pharmaceutical composition inhibiting the type 4 and type 5 phosphodiesterase, in particular a pharmaceutical composition for the treatment or prophylaxis of diseases alleviated by inhibition of type 4 and type 5 phosphodiesterase, preferably, a pharmaceutical composition for the treatment or prophylaxis of the diseases exemplified above.

10

In particular, the invention relates to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of an acute or chronic airway disease, such as, but not limited to, interstitial lung disease, pulmonary fibrosis, cystic fibrosis, bronchial asthma, chronic bronchitis, emphysema, chronic obstructive pulmonary disease (COPD) or COPD associated with pulmonary hypertension.

15

The invention also relates to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of pulmonary hypertension or thromboembolic pulmonary hypertension.

20

The invention relates also to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of allergic rhinitis or allergic asthma.

25

Furthermore, the invention relates to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of dermatological diseases, such as, but not limited to, psoriasis or atopic dermatitis (eczema).

30

In addition, the invention relates to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of ocular diseases, such as, but not limited to uveitis, scleritis, keratitis, retinal vasculitis, age-related macula degeneration, diabetic nephropathy, or chronic or allergic conjunctivitis.

35

The invention relates as well to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of rheumatoid arthritis.

Additionally, the invention relates to the use of a compound of the invention in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of inflammations in the gastrointestinal region, such as, but not limited to, Crohn's disease or ulcerative colitis.

In a particularly preferred embodiment of the invention, in the above-mentioned uses the compound of the invention is a compound of the examples according to the invention.

5 The invention further relates to a method of treating or preventing a disease comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

In particular, the invention relates to a method of treating or preventing one of the above mentioned diseases comprising administering to a patient in need thereof a therapeutically effective amount of at
10 least one of the compounds of the invention.

Especially, the invention relates to a method of treating or preventing a disease, which is alleviated by inhibition of the type 4 and type 5 phosphodiesterase comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

15 Preferably, the invention relates to a method of treating or preventing an acute or chronic airway disease, for example, but not limited to interstitial lung disease, pulmonary fibrosis, cystic fibrosis, bronchial asthma, chronic bronchitis, emphysema, chronic obstructive pulmonary disease (COPD) or COPD associated with pulmonary hypertension comprising administering to a patient in need thereof a
20 therapeutically effective amount of at least one of the compounds of the invention.

The invention relates also to a method of treating or preventing pulmonary hypertension or thromboembolic pulmonary hypertension comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

25 The invention relates also to a method of treating or preventing allergic rhinitis or allergic asthma comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

30 Furthermore, the invention preferably relates to a method of treating or preventing dermatological diseases, such as, but not limited to, psoriasis or atopic dermatitis (eczema) comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

35 In addition, the invention preferably relates to a method of treating or preventing diseases of the eye, such as, but not limited to, uveitis, scleritis, keratitis, retinal vasculitis, age-related macula degeneration, diabetic nephropathy or chronic or allergic conjunctivitis comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

The invention relates as well to a method of treating or preventing rheumatoid arthritis comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

5 Additionally, the invention preferably relates to a method of treating or preventing diseases in the gastrointestinal region, such as, but not limited to, Crohn's disease or ulcerative colitis comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds of the invention.

10 In the above methods, the patient is preferably a mammal, more preferably a human. Furthermore, in the above methods, at least one of the compounds of the invention can be used. Preferably, one or two of the compounds of the invention are used, more preferably, one of the compounds of the invention is used.

15 In a particularly preferred embodiment of the invention, the above methods of treating or preventing one of the above mentioned diseases comprise administering to a patient in need thereof a therapeutically effective amount of a compound of the examples according to the present invention.

Pharmaceutical compositions

20

The invention furthermore relates to a pharmaceutical composition, which comprises at least one of the compounds of the invention together with at least one pharmaceutically acceptable auxiliary.

Preferably, the pharmaceutical composition comprises one or two of the compounds of the invention.

25 More preferably, the pharmaceutical composition comprises one of the compounds of the invention.

In a particularly preferred embodiment of the invention, the pharmaceutical composition comprises a compound of the examples according to the present invention together with at least one pharmaceutically acceptable auxiliary.

30

The invention furthermore relates to a pharmaceutical composition according to the invention inhibiting the type 4 and type 5 phosphodiesterase, especially for (use in) the treatment or prophylaxis of diseases alleviated by inhibition of type 4 and type 5 phosphodiesterase, in particular for the treatment or prophylaxis of the diseases exemplified above.

35

The invention encompasses pharmaceutical compositions according to the invention, as defined above, in particular for (use in) the treatment or prophylaxis of one or more of the following diseases: interstitial lung disease such as pulmonary fibrosis, cystic fibrosis, bronchial asthma, chronic bronchitis, allergic bronchitis, allergic rhinitis, emphysema, chronic obstructive pulmonary disease (COPD) and

40 COPD associated with pulmonary hypertension;

pulmonary hypertension, in particular thromboembolic pulmonary hypertension;
dermatological diseases, such as psoriasis and atopic dermatitis (eczema);
ocular diseases, such as uveitis, scleritis, keratitis, retinal vasculitis, age-related macula degeneration,
diabetic nephropathy, and chronic and allergic conjunctivitis

5 rheumatoid arthritis; and

inflammations in the gastrointestinal region, such as Crohn's disease and ulcerative colitis.

Although the compounds of the invention may be administered orally, oral administration is not presently thought to be a preferred route of administration. This is because, without intending to be bound
10 by this data, preliminary tests appear to indicate low systemic exposure after oral administration of the compounds of the invention in rats at a dose level of about 10 µmol/kg of the compound of the invention per kg bodyweight when formulated in aqueous suspension with polyethyleneglycol 400 (1.3%) and hypromellose (4%).

15 The compounds of the invention respectively the pharmaceutical compositions comprising the compounds of the invention therefore preferably may be administered, for example, by external topical (i.e. through the skin/ transdermal or via the eye), parenteral (e.g. intravenous, subcutaneous, intraarterial, intraperitoneal, intraarticular, or intramuscular), inhaled or nasal administration. The compounds may also be administered via the rectal route, for example in form of a suppository or a foam.

20 Accordingly, the pharmaceutical composition can be suitable for (e.g. adapted for) external topical (i.e. through the skin / transdermal or via the eye), parenteral (e.g. intravenous, subcutaneous, intraarterial, intraperitoneal, intraarticular, or intramuscular), inhaled or nasal administration. The pharmaceutical composition is preferably suitable for inhaled administration. Inhaled administration involves topical
25 administration to the lung e.g. by aerosol or dry powder composition.

Inhalable and intranasal pharmaceutical compositions

Formulations for inhalation include powder compositions, which will preferably contain lactose,
30 and spray compositions which may be formulated, for example, as aqueous solutions or suspensions or as aerosols delivered from pressurised packs, with the use of a suitable propellant, e. g. 1, 1, 1, 2-tetrafluoroethane, 1, 1, 1, 2, 3, 3, 3-heptafluoropropane, carbon dioxide or other suitable gas.

35 A class of propellants, which is believed to have minimal ozone-depleting effects in comparison to conventional chlorofluorocarbons comprise hydrofluorocarbons and a number of medicinal aerosol formulations using such propellant systems are disclosed in, for example, EP 0372777, W091/04011, W091/11173, W091/11495, W091/14422, W093/11743, and EP-0553298. These

applications are all concerned with the preparation of pressurised aerosols for the administration of medicaments and seek to overcome problems associated with the use of this new class of propellants, in particular the problems of stability associated with the pharmaceutical formulations prepared. The applications propose, for example, the addition of one or more of excipients such as polar cosolvents or wetting agents (e.g. alcohols such as ethanol), alkanes, dimethyl ether, surfactants (including fluorinated and non-fluorinated surfactants, carboxylic acids such as oleic acid, polyethoxylates etc.) or bulking agents such as a sugar (see for example WO02/30394) and vehicles such as cromoglicic acid and/or nedocromil which are contained at concentrations, which are not therapeutically and prophylactically active (see WO00/07567). The aerosol dosage form can also take the form of a pump-atomizer.

For suspension aerosols, the compound of the invention should be micronised so as to permit inhalation of substantially all of the compound of the invention into the lungs upon administration of the aerosol formulation, thus the compound of the invention will have a mean particle size of less than 100 μm , desirably less than 20 μm , and preferably in the range of 1 to 10 μm (D50 value, e.g. as measured using laser diffraction).

Dry powder inhalable compositions: For pharmaceutical compositions suitable (e.g. adapted for) inhaled administration, the pharmaceutical composition may for example be a dry powder inhalable composition. The dry powder comprises finely divided compound of the invention optionally together with a finely divided pharmaceutically acceptable carrier, which is preferably present and may be one or more materials known as carriers in dry powder inhalation compositions, for example saccharides, including monosaccharides, disaccharides, polysaccharides and sugar alcohols such as arabinose, glucose, fructose, ribose, mannose, sucrose, trehalose, lactose, maltose, starches, dextran or mannitol. An especially preferred carrier is lactose, particularly in the form of the monohydrate.

The dry powder may be in capsules of gelatine or plastic, or in blisters, for use in a dry powder inhalation device, preferably in dosage units of the compound of the invention together with the carrier in amounts to bring the total weight of powder in each capsule to from 5mg to 50mg. Alternatively the dry powder may be contained in a reservoir of a multi-dose dry powder inhalation device. Capsules and cartridges of for example gelatin, or blisters of for example laminated aluminium foil, for use in an inhaler or insulator may be formulated containing a powder mix of the compounds of the invention and a suitable powder base such as lactose or starch, preferably lactose. In this aspect, the compound of the invention is suitably micronised so as to permit inhalation of substantially all of the compound of the invention into the lungs upon administration of the dry powder formulation, thus the compound of the invention will have a particle size of less than 100 μm , desirably less than 20 μm , and preferably in the range 1 to 10 μm (D50 value, e.g. as measured using laser diffraction). The solid carrier, where present, generally has a maximum particle diameter of 300 μm , preferably 200 μm , and conveniently has a mean particle diameter of 40 to 100 μm , preferably 50 to 75 μm . The particle size of the compound of the invention and that of a solid carrier where present in dry powder compositions, can be

reduced to the desired level by conventional methods, for example by grinding in an air-jet mill, ball mill or vibrator mill, microprecipitation, spray drying, lyophilisation or recrystallisation from supercritical media.

Where the inhalable form of the composition of the invention is the finely divided particulate form, the inhalation device may be, for example a dry powder inhalation device adapted to deliver dry powder from a capsule or blister containing a dosage unit of the dry powder or a multi-dose dry powder inhalation device. Such dry powder inhalation devices are known in the art. Examples which may be mentioned are Cyclohaler®, Diskhaler®, Rotadisk®, Turbohaler®, Novolizer®, Easyhaler®, Jethaler®, Clickhaler® or the dry powder inhalation devices disclosed in EP 0 505 321, EP 407028, EP 650410, EP 691865 or EP 725725 (Ultrahaler®).

Formulations for inhalation by nebulization may be formulated with an aqueous vehicle with the addition of agents such as acid or alkali, buffer salts, isotonicity adjusting agents or antimicrobials. They may be sterilised by filtration or heating in an autoclave. Suitable technologies for this type of administration are known in the art. As an example the Mystic® technology is to be mentioned (see for example US6397838, US6454193 and US6302331).

Preferred unit dosage formulations are those containing a pharmaceutical effective dose, as hereinbelow recited, or an appropriate fraction thereof, of the active ingredient. Thus, in the case of formulations designed for delivery by metered dose pressurised aerosols, one actuation of the aerosol may deliver half of the therapeutical effective amount such that two actuations are necessary to deliver the therapeutically effective dose.

In the dry powder inhalable composition, the compound of the invention can for example be present in about 0.1% to about 70% (e.g. about 1% to about 50%, e.g. about 5% to about 40%, e.g. about 20 to about 30%) by weight of the composition.

In case of intranasal administration, for example, sprays and solutions to be applied in drop form are preferred formulations. Intranasal sprays or nasal drops may be formulated with aqueous or non-aqueous vehicles with or without the addition of agents such as thickening agents, buffer salts or acid or alkali to adjust the pH, isotonicity adjusting agents, preservatives or anti-oxidants.

Pharmaceutical compositions suitable for external topical administration

"External topical" administration means topical administration to an external body part (i.e. excluding, for example, the lung or mouth, but including the lips or the eye). External topical administration (e.g. through the skin / transdermal) can for example be to those parts of the skin affected by or susceptible to a dermatological disease, such as for example, atopic dermatitis or psoriasis.

In case of external topical administration (i.e. through the skin / transdermal), suitable pharmaceutical formulations are, for example, ointments, creams (usually an oil-in-water or water-in-oil pharmaceutical composition, usually an emulsion), lotions, pastes, gels, powders, solutions, emulsions, suspensions, oils, sprays and patches (e.g., but not limited to, transdermal therapeutic systems).

5

In an external-topical pharmaceutical composition, e.g. an ointment or an oil-in-water or water-in-oil composition, the compound of the invention is suitably present in 0.05 to 10%, preferably 0.1 to 5%, more preferably 0.1 to 3%, still more preferably 0.5 to about 2.5 %, by weight of the composition (w/w).

- 10 External topical administration (e.g. via the eye) can for example be to the eye affected by or susceptible to an ocular disease, such as for example, uveitis, scleritis, keratitis, retinal vasculitis, age-related macula degeneration, diabetic nephropathy, and chronic and allergic conjunctivitis.

- 15 Examples, which may be mentioned in connection with pharmaceutical formulations for the eye are eye baths or eye lotions, eye inserts, eye ointments, eye sprays, eye drops, preparations for intraocular application [e.g. intravitreal application, intraocular injection] and eyelid ointments.

Pharmaceutical compositions for oral or parenteral administration

- 20 For parenteral modes of administration such as, for example, intravenous, subcutaneous or intramuscular administration, preferably solutions (e.g., but not limited to, sterile solutions, isotonic solutions) are used. They are preferably administered by injection or infusion techniques.

- 25 A pharmaceutical composition suitable for parenteral (e.g. intravenous, subcutaneous or intramuscular) administration can comprise a solution or suspension of the compound of the invention in a sterile parenterally acceptable carrier (e.g. sterile water) or parenterally acceptable oil. Alternatively, the solution can be lyophilised. A lyophilised pharmaceutical composition suitable for parenteral administration may, in use, optionally be reconstituted with a suitable solvent, e.g. sterile water or a sterile parenterally acceptable aqueous solution, just prior to administration.

30

Oral administration is not preferred, as described above. However, a pharmaceutical composition for oral administration may be liquid or solid; for example, it may be a syrup, suspension or emulsion; as well it may be, for example, a tablet, coated tablet (dragee), pill, cachet, capsule (caplet), or in form of granules.

35

A liquid formulation may optionally consist of a suspension or solution of the compound of the invention in a pharmaceutically acceptable liquid carrier, for example an aqueous solvent such as water, ethanol or glycerine, or a non-aqueous solvent, such as polyethylene glycol or an oil. The formulation may contain in addition, a suspending agent, a preservative, a flavouring and/or a colouring agent.

40

A pharmaceutical composition for oral administration being a tablet, through not preferred, may comprise one or more pharmaceutically acceptable auxiliaries (for example, carriers and/or excipients) suitable for preparing tablet formulations. The carrier may, for example, be or include lactose, cellulose or mannitol. The tablet may also or instead contain one or more pharmaceutically acceptable excipients, for example, a binding agent, a lubricant and/or a tablet disintegrant.

The pharmaceutical compositions according to the invention for oral or parenteral administration preferably contain the compound or compounds of the invention in a total amount of from 0.1 to 99.9%, more preferably 5 to 95%, in particular 20 to 80% by weight of the composition (w/w).

In general, as pharmaceutically acceptable auxiliaries, any auxiliaries known to be suitable for preparing a particular pharmaceutical composition can be used. Examples thereof include, but are not limited to, solvents, excipients, dispersants, emulsifiers, solubilizers, gel formers, ointment bases, antioxidants, preservatives, stabilizers, carriers, fillers, binders, thickeners, complexing agents, disintegrating agents, buffers, permeation promoters, polymers, lubricants, coating agents, propellants, tonicity adjusting agents, surfactants, colorants, flavorings, sweeteners and dyes. In particular, auxiliaries of a type appropriate to the desired formulation and the desired mode of administration are used.

The pharmaceutical compositions/formulations can be manufactured in a manner known to a person skilled in the art, e.g. by dissolving, mixing, granulating, dragee-making, levigating, emulsifying, encapsulating, entrapping or lyophilizing processes.

Dosages

Generally, the pharmaceutical compositions according to the invention can be administered such that the dose of the compound of the invention is in the range customary for type 4 phosphodiesterase inhibitors.

The pharmaceutically acceptable compounds of the invention are preferably administered in a daily dose (for an adult patient) of, for example an oral or parenteral dose of 0.01 mg to 250 mg per day, preferably 0.05 mg to 100 mg per day, more preferably 0.05 mg to 10 mg per day, or a nasal or inhaled dose of 0.001 mg to 30 mg per day, preferably 0.01 mg to 10 mg per day, more preferably 0.1 mg to 4 mg per day, of the compound of the invention, calculated as the free compound (= the unsolvated, unhydrated, non-salt form of the compound).

In this respect, it is to be noted that the dose is dependent, for example, on the specific compound used, the species treated, age, body weight, general health, sex and diet of the subject treated, mode and time of administration, rate of excretion, severity of the disease to be treated and drug combination.

The pharmaceutical compositions of the invention can be administered in a single dose per day or in multiple subdoses, for example, 2 to 4 doses per day. A single dose unit of the pharmaceutical composition can contain, in case of inhalative administration e.g. from 0.001 mg to 10 mg, preferably 0.01 mg to 7.5 mg, more preferably 0.1mg to 4 mg of the compound of the invention. Administration of the pharmaceutical composition in a single dose per day is preferred.

Combinations

Depending on the particular disease to be treated or prevented, additionally therapeutic agents, which are normally administered to treat or prevent that disease, may optionally be co-administered with the compounds of the invention.

In a preferred embodiment, at least one of the compounds of the invention is co-administered with at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, PPAR γ agonists, ACE inhibitors, angiotensin II-receptor antagonists, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides.

In this respect, the "therapeutic agent" includes the corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, PPAR γ agonists, ACE inhibitors, angiotensin II-receptor antagonists, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides in form of the free compounds, the pharmaceutically acceptable salts thereof, the pharmaceutically acceptable derivatives thereof (e.g., but not limited to, ester derivatives, N-oxides etc.), the solvates (hydrates) thereof and the stereoisomers of the compounds, salts, derivatives and solvates.

Co-administration of at least one of the compounds of the invention with at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA

reductase-inhibitors, PPAR γ agonists, ACE inhibitors, angiotensin II-receptor antagonists, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides can take place in form of a fixed combination, a non-fixed combination or a kit of parts.

5

A "fixed combination" is defined as a combination wherein the compound of the invention and the therapeutic agent intended for co-administration are present in one dosing unit or in a single entity. One example of a fixed combination is a pharmaceutical composition wherein the compound of the invention and the therapeutic agent are present in admixture for simultaneous administration. Another

10 example of a fixed combination is a pharmaceutical composition wherein the compound of the invention and the therapeutic compound are present in one dosing unit without being in admixture.

15

A "non-fixed combination" or "kit of parts" is defined as a combination wherein the compound of the invention and the therapeutic agent are present in more than one dosing unit. In a non-fixed combination or a kit of parts the compound of the invention and the therapeutic agent are provided as separate formulations. They might be packaged and presented together as separate components of a combination pack for simultaneous, sequential or separate use in combination therapy. Simultaneous or sequential administration of the compound of the invention and the therapeutic agent are preferred. In case of sequential or separate administration of the compound of the invention and the therapeutic

20 agent, the compound of the invention can be administered before or after administration of the therapeutic agent.

25

Sequential administration encompasses a short time period between the administration of the compound of the invention and the therapeutic agent or vice versa (for example, the time that is needed to swallow one tablet after the other).

30

Separate administration encompasses longer time periods between the administration of the compound of the invention and the therapeutic agent. In a preferred embodiment of the invention, the compound of the invention is administered while the therapeutic agent (or vice versa) still has a therapeutic effect on the patient being treated.

35

In a particularly preferred embodiment of the invention the co-administration of at least one of the compounds of the invention with at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene

40 receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, PPAR γ agonists, ACE inhibitors, angiotensin II-receptor antagonists, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides leads to a therapeutic effect that is

greater than the sum of the therapeutic effects that will be achieved in case the compound of the invention respectively the additional therapeutic agent are given alone.

The type of formulation of the compound of the invention and the therapeutic agent of a non-fixed combination or a kit of parts can be identical, i.e. both, the compound of the invention and the therapeutic agent are formulated, for example, as powder, solution or suspension suitable for inhalative administration, or can be different, i.e. suited for different administration forms, such as e.g. the compound of the invention is formulated as powder, solution or suspension suitable for inhalative administration and the therapeutic agent is formulated as tablet or capsule for oral administration.

Accordingly, the invention additionally relates to a pharmaceutical composition presented either as a fixed combination, a non-fixed combination or kit of parts comprising at least one of the compounds of the invention, at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, PPAR γ agonists, ACE inhibitors, angiotensin II-receptor antagonists, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides, and at least one pharmaceutically acceptable auxiliary.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a β_2 -adrenoreceptor agonist and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

a compound of the invention and salbutamol,
a compound of the invention and milveterol,
a compound of the invention and indacaterol,
a compound of the invention and carmoterol,
a compound of the invention and salmeterol,
a compound of the invention and formoterol,
a compound of the invention and vilanterol, or
a compound of the invention and olodaterol,
and at least one pharmaceutically acceptable auxiliary.

In a preferred embodiment, the pharmaceutically acceptable salt of salbutamol is salbutamol sulfate. In a preferred embodiment, the pharmaceutically acceptable salt of milveterol is milveterol hydrochloride. In a preferred embodiment, the pharmaceutically acceptable salt of carmoterol is carmoterol hydrochloride. In a preferred embodiment, the pharmaceutically acceptable salt of salmeterol is salmeterol xina-

foate. In another preferred embodiment, the pharmaceutically acceptable salt of formoterol is formoterol hemifumarate monohydrate. In another preferred embodiment, the stereoisomer of formoterol is R,R-formoterol. In another preferred embodiment, the pharmaceutically acceptable salt of R,R-formoterol is R,R-formoterol L-tartrate. In a preferred embodiment, the pharmaceutically acceptable salt of vilanterol is vilanterol trifenate. In another preferred embodiment, the pharmaceutically acceptable salt of vilanterol is vilanterol α -phenyl cinnamate. In a preferred embodiment, the pharmaceutically acceptable salt of olodaterol is olodaterol hydrochloride.

Preferably the β 2-adrenoreceptor agonist is a long-acting β 2-adrenoreceptor agonist; particularly preferred in this respect are those β 2-adrenoreceptor agonists having a therapeutic effect over a 12-24 hours period. Furthermore, the β 2-adrenoreceptor agonist is preferably for inhaled administration, for once daily administration and for simultaneous inhaled administration.

Preferably, the combination comprising a compound of the invention and a β 2-adrenoreceptor agonist is for the treatment or prophylaxis of bronchial asthma and COPD.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a corticosteroid and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

a compound of the invention and budesonide,
a compound of the invention and fluticasone,
a compound of the invention and beclometasone,
a compound of the invention and mometasone,
a compound of the invention and triamcinolone acetonide, or
a compound of the invention and ciclesonide,
and at least one pharmaceutically acceptable auxiliary.

In a preferred embodiment, the pharmaceutically acceptable derivative of fluticasone is fluticasone-17-propionate. In another preferred embodiment, the pharmaceutically acceptable derivative of fluticasone is fluticasone-17-furoate. In another preferred embodiment, the pharmaceutically acceptable derivative of beclometasone is beclometasone 17, 21-dipropionate ester. In a preferred embodiment, the pharmaceutically acceptable derivative of mometasone is mometasone furoate.

The combination comprising a compound of the invention and a corticosteroid preferably is for the treatment and prophylaxis of bronchial asthma, COPD, allergic rhinitis or a dermatological disease, such as for example atopic dermatitis. Preferably the corticosteroid is used for external topical, intranasal or inhaled administration; in severe cases, the corticosteroid may also be used orally.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), an anticholinergic and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or
5 kit of parts comprise:

a compound of the invention and glycopyrronium bromide,
a compound of the invention and acridinium bromide,
a compound of the invention and tiotropium bromide,
a compound of the invention and ipratropium bromide, or
10 a compound of the invention and darotropium bromide,
and at least one pharmaceutically acceptable auxiliary.

In a preferred embodiment, the stereoisomer of glycopyrronium bromide is (R,R)-glycopyrronium bromide. In a preferred embodiment, tiotropium bromide is used in form of its monohydrate.
15

Preferably, the anticholinergic is for inhaled administration. The combination comprising a compound of the invention and an anticholinergic is preferably for the treatment or prophylaxis of COPD.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a H1 receptor antagonist and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:
20

a compound of the invention and azelastine,
25 a compound of the invention and olopatadine,
a compound of the invention and loratadine,
a compound of the invention and desloratadine, or
a compound of the invention and cetirizine,
and at least one pharmaceutically acceptable auxiliary.

30 In a preferred embodiment, the pharmaceutically acceptable salt of azelastine is azelastine hydrochloride. In a preferred embodiment, the pharmaceutically acceptable salt of olapatadine is olapatadine hydrochloride. In a preferred embodiment, the pharmaceutically acceptable salt of cetirizine is cetirizine dihydrochloride. In a preferred embodiment, the stereoisomer of cetirizine is levocetirizine. In another
35 preferred embodiment, the pharmaceutically acceptable salt of levocetirizine is levocetirizine dihydrochloride.

The combination comprising a compound of the invention and a H1 receptor agonist is preferably for the treatment or prophylaxis of allergic rhinitis.
40

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a leukotriene receptor antagonist and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination,

5 non-fixed combination or kit of parts comprise:

a compound of the invention and montelukast,

a compound of the invention and pranlukast, or

a compound of the invention and zafirlukast,

and at least one pharmaceutically acceptable auxiliary.

10

In a preferred embodiment, the pharmaceutically acceptable salt of montelukast is montelukast sodium. In another preferred embodiment, pranlukast is used in form of its monohydrate.

The combination comprising a compound of the invention and a leukotriene receptor antagonist is preferably for the treatment or prophylaxis of bronchial asthma.

15

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a 5-lipoxygenase inhibitor and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

20

a compound of the invention and zileuton,

and at least one pharmaceutically acceptable auxiliary.

25 The combination comprising a compound of the invention and a 5-lipoxygenase inhibitor is preferably for the treatment or prophylaxis of bronchial asthma.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), an endothelin antagonist and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

30

a compound of the invention and bosentan,

a compound of the invention and ambrisentan,

35

a compound of the invention and atrasentan,

a compound of the invention and darusentan,

a compound of the invention and clazosentan, or

a compound of the invention and avosentan,

and at least one pharmaceutically acceptable auxiliary.

40

In another preferred embodiment, bosentan is used in form of its monohydrate. In another preferred embodiment the pharmaceutically acceptable salt of clazosentan is the disodium salt of clazosentan. In another preferred embodiment the pharmaceutically acceptable salts of atrasentan are atrasentan hydrochloride or the sodium salt of atrasentan. In another preferred embodiment the R-enantiomer of atrasentan is used. In another preferred embodiment the S-enantiomer of darusentan is used.

The combination comprising a compound of the invention and an endothelin antagonist is preferably for the treatment or prophylaxis of pulmonary hypertension and COPD.

10 In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a prostacyclin and at least one pharmaceutically acceptable auxiliary. In a particularly alternative embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

15 a compound of the invention and iloprost,
a compound of the invention and epoprostenol, or
a compound of the invention and triprostinil,
and at least one pharmaceutically acceptable auxiliary.

20 The combination comprising a compound of the invention and a prostacyclin is preferably for the treatment or prophylaxis of pulmonary hypertension.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a calcium channel blocker and at least one pharmaceutically acceptable auxiliary. In a particularly alternative embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

25 a compound of the invention and amlodipine,
a compound of the invention and nifedipine,
30 a compound of the invention and diltiazem,
a compound of the invention and verapamil, or
a compound of the invention and felodipine,
and at least one pharmaceutically acceptable auxiliary.

35 In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a beta-blocker and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

40 a compound of the invention and bisoprolol,

- a compound of the invention and nebivolol,
a compound of the invention and metoprolol,
a compound of the invention and carvedilol,
a compound of the invention and atenolol, or
5 a compound of the invention and nadolol,
and at least one pharmaceutically acceptable auxiliary.

- In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is
10 one of the examples of the invention), a type 4 phosphodiesterase inhibitor and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:
a compound of the invention and roflumilast,
a compound of the invention and roflumilast N-oxide,
15 a compound of the invention and apremilast,
a compound of the invention and oglemilast,
a compound of the invention and revamilast, or
a compound of the invention and 6-({3- [(dimethylamino) carbonyl]phenyl}sulfonyl)-8-methyl-4-{ [3-methoxy]phenyl}amino)-3-quinolinecarboxamide (GSK256066)
20 and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and an additional PDE4 inhibitor is preferably for the treatment or prophylaxis of pulmonary hypertension and COPD.

- 25 In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a type 5 phosphodiesterase inhibitor and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:
30 a compound of the invention and sildenafil,
a compound of the invention and vardenafil,
a compound of the invention and tadalafil,
a compound of the invention and udenafil, or
a compound of the invention and avanafil,
35 and at least one pharmaceutically acceptable auxiliary.

In another preferred embodiment, the pharmaceutically acceptable salts of sildenafil are sildenafil hemi-citrate, sildenafil citrate and sildenafil mesilate; particularly preferred is the citrate salt of sildenafil. In another preferred embodiment, the pharmaceutically acceptable salts of vardenafil are vardenafil hy-

drochloride or vardenafil dihydrochloride. In another preferred embodiment, the pharmaceutically acceptable salt of avanafil is avanafil besilate.

5 The combination comprising a compound of the invention and an additional PDE5 inhibitor is preferably for the treatment or prophylaxis of pulmonary hypertension and COPD.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a guanyl-cyclase activator/stimulator and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

10 a compound of the present subject matter and BAY63-2521 (Riociguat), or
a compound of the present subject matter and Ataciguat,
and at least one pharmaceutically acceptable auxiliary.

15 In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), tetrahydrobiopterin or a tetrahydrobiopterin derivative and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

20 a compound of the invention and (6R)-L-erythro-5,6,7,8-tetrahydrobiopterin,
a compound of the invention and (6R,S)-5,6,7,8-tetrahydrobiopterin,
a compound of the invention and 1',2'-diacetyl-5,6,7,8-tetrahydrobiopterin,
a compound of the invention and sepiapterin,
25 a compound of the invention and 6-methyl-5,6,7,8-tetrahydropterin,
a compound of the invention and 6-hydroxymethyl-5,6,7,8-tetrahydropterin, or
a compound of the invention and 6-phenyl-5,6,7,8-tetrahydropterin,
and at least one pharmaceutically acceptable auxiliary.

30 In a preferred embodiment, the pharmaceutically acceptable derivative of (6R)-L-erythro-5,6,7,8-tetrahydrobiopterin is (6R)-L-erythro-5,6,7,8-tetrahydrobiopterin dihydrochloride.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a HMG-CoA reductase inhibitor and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

35 a compound of the invention and lovastatin,
a compound of the invention and pravastatin,
40 a compound of the invention and simvastatin,

- a compound of the invention and atorvastatin,
a compound of the invention and fluvastatin,
a compound of the invention and rosuvastatin,
a compound of the invention and pitavastatin,
5 a compound of the invention and bervastatin,
a compound of the invention and dalvastatin, or
a compound of the invention and glenvastatin,
and at least one pharmaceutically acceptable auxiliary.
- 10 In a preferred embodiment the pharmaceutically acceptable salts of pravastatin are the potassium, lithium, sodium and hemi-calcium salt of pravastatin. A particularly preferred pharmaceutically acceptable salt of pravastatin is the sodium salt of pravastatin. In a preferred embodiment the pharmaceutically acceptable salt of simvastatin is the sodium salt of simvastatin. In a preferred embodiment the pharmaceutically acceptable salts of atorvastatin are the potassium, sodium and the hemi-calcium salt
15 of atorvastatin. A particularly preferred pharmaceutically acceptable salt of atorvastatin is the hemi-calcium salt of atorvastatin. As an example for a hydrate of atorvastatin may be mentioned the trihydrate and the sesqui-hydrate of the hemi-calcium salt of atorvastatin. In a preferred embodiment of the pharmaceutically acceptable salt of fluvastatin is the sodium salt of fluvastatin. In a preferred embodiment the pharmaceutically acceptable salts of rosuvastatin are the potassium, lithium, sodium, hemi-magnesium and the hemi-calcium salt of rosuvastatin. A particularly preferred pharmaceutically acceptable salt of rosuvastatin is the hemi-calcium salt of rosuvastatin. Another particularly preferred pharmaceutically acceptable salt of rosuvastatin is the sodium salt of rosuvastatin. In a preferred embodiment the pharmaceutically acceptable salts of pitavastatin are the potassium, sodium and the hemi-calcium salt of pitavastatin. A particularly preferred pharmaceutically acceptable salt of pitavastatin
25 is the hemi-calcium salt of pitavastatin.
- The combination comprising a compound of the invention and a HMG-CoA reductase inhibitor is preferably for the treatment or prophylaxis of COPD.
- 30 In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a PPAR γ agonist and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:
- 35 a compound of the invention and pioglitazone,
a compound of the invention and rosiglitazone,
a compound of the invention and troglitazone,
a compound of the invention and rivoglitazone, or
a compound of the invention and ciglitazone,
40 and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and an additional PPAR γ agonist is preferably for the treatment or prophylaxis of COPD and comorbidities.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a ACE inhibitor and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

- a compound of the invention and captopril,
- 10 a compound of the invention and enalapril,
- a compound of the invention and fosinopril,
- a compound of the invention and lisinopril,
- a compound of the invention and moexipril,
- a compound of the invention and benazepril,
- 15 a compound of the invention and perindopril
- a compound of the invention and ramipril
- a compound of the invention and trandolapril, or
- a compound of the invention and quinapril,
- and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and an additional ACE inhibitor is preferably for the treatment or prophylaxis of COPD and comorbidities.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a angiotensin II receptor antagonist and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

- a compound of the invention and losartan,
- 30 a compound of the invention and azilsartan,
- a compound of the invention and valsartan,
- a compound of the invention and olesartan,
- a compound of the invention and telmisartan, or
- a compound of the invention and irbesartan,
- 35 and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and an additional angiotensin II receptor antagonist is preferably for the treatment or prophylaxis of COPD and comorbidities.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the

40

examples of the invention), a lung surfactant and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

- a compound of the invention and lusupultide,
- 5 a compound of the invention and poracant alfa,
- a compound of the invention and sinapultide,
- a compound of the invention and beracant,
- a compound of the invention and bovacant,
- a compound of the invention and colfosceril palmitate,
- 10 a compound of the invention and surfactant-TA, or
- a compound of the invention and calfacant,
- and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and a lung surfactant is preferably for the
15 treatment or prophylaxis of bronchial asthma or COPD.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), an antibiotic and at least one pharmaceutically acceptable auxiliary. In a
20 particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

- a compound of the invention and amoxicillin,
- a compound of the invention and ampicillin,
- a compound of the invention and levofloxacin,
- 25 a compound of the invention and clarithromycin,
- a compound of the invention and ciprofloxacin,
- a compound of the invention and telithromycin, or
- a compound of the invention and azithromycin,
- and at least one pharmaceutically acceptable auxiliary.

30 In a preferred embodiment, amoxicillin is used in form of its trihydrate. In another preferred embodiment, ampicillin is used in form of its trihydrate. In another preferred embodiment, the pharmaceutically acceptable salt of ampicillin is ampicillin natrium. In another preferred embodiment levofloxacin is used in form of its hemi hydrate. In another preferred embodiment, the pharmaceutically acceptable salt of
35 ciprofloxacin is ciprofloxacin hydrochloride monohydrate. In another preferred embodiment, azithromycin is used in form of its monohydrate.

The combination comprising a compound of the invention and an antibiotic is preferably for the treatment or prophylaxis of exacerbations associated with bronchial asthma and COPD.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the examples of the invention), an anticoagulant and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or

5 kit of parts comprise:

a compound of the invention and clopidogrel,

a compound of the invention and enoxaparin,

a compound of the invention and cilostazol,

a compound of the invention and nadroparin,

10 a compound of the invention and warfarin, or

a compound of the invention and abciximab,

and at least one pharmaceutically acceptable auxiliary.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the

15 examples of the invention), a diuretic and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

a compound of the invention and furosemide,

a compound of the invention and bumetanide, or

20 a compound of the invention and torsemide,

and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and a diuretic preferably is for the treatment and prophylaxis of cystic fibrosis.

25

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the examples of the invention), pirfenidone and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or

30 kit of parts comprise:

a compound of the invention and pirfenidone,

and at least one pharmaceutically acceptable auxiliary.

The combination comprising a compound of the invention and pirfenidone preferably is for the treatment and prophylaxis of lung fibrosis.

35

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a digitalis glycoside and at least one pharmaceutically acceptable auxiliary.

In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

a compound of the invention and digoxin, or

a compound of the invention and digitoxin,

5 and at least one pharmaceutically acceptable auxiliary.

In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a corticosteroid, a β_2 -adrenoreceptor agonist and at least one pharmaceuti-
10 cally acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise:

a compound of the invention, budesonide and salbutamol,

a compound of the invention, budesonide and milveterol,

a compound of the invention, budesonide and indacaterol,

15 a compound of the invention, budesonide and carmoterol,

a compound of the invention, budesonide and salmeterol,

a compound of the invention, budesonide and formoterol,

a compound of the invention, budesonide and vilanterol,

a compound of the invention, budesonide and olodaterol,

a compound of the invention, mometasone and indacaterol,

a compound of the invention, mometasone and carmoterol,

40 a compound of the invention, mometasone and salmeterol,

- a compound of the invention, mometasone and formoterol,
a compound of the invention, mometasone and vilanterol,
a compound of the invention, mometasone and olodaterol,
a compound of the invention, triamcinolone acetonide and salbutamol,
5 a compound of the invention, triamcinolone acetonide and milveterol,
a compound of the invention, triamcinolone acetonide and indacaterol,
a compound of the invention, triamcinolone acetonide and carmoterol,
a compound of the invention, triamcinolone acetonide and salmeterol,
a compound of the invention, triamcinolone acetonide and formoterol,
10 a compound of the invention, triamcinolone and vilanterol,
a compound of the invention, triamcinolone and olodaterol,
a compound of the invention, ciclesonide and salbutamol,
a compound of the invention, ciclesonide and milveterol,
a compound of the invention, ciclesonide and indacaterol,
15 a compound of the invention, ciclesonide and carmoterol,
a compound of the invention, ciclesonide and salmeterol,
a compound of the invention, ciclesonide and formoterol,
a compound of the invention, ciclesonide and vilanterol, or
a compound of the invention, ciclesonide and olodaterol,
20 and at least one pharmaceutically acceptable auxiliary.

- In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprises a compound of the invention (in particular the compound of the invention is one of the examples of the invention), a β_2 -adrenoreceptor agonist, an anticholinergic and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed
25 combination, non-fixed combination or kit of parts comprise:
a compound of the invention, salbutamol and glycopyrronium bromide,
a compound of the invention, salbutamol and aclidinium bromide,
a compound of the invention, salbutamol and tiotropium bromide,
30 a compound of the invention, salbutamol and ipratropium bromide,
a compound of the invention, salbutamol and darotropium bromide,
a compound of the invention, milveterol and glycopyrronium bromide,
a compound of the invention, milveterol and aclidinium bromide,
a compound of the invention, milveterol and tiotropium bromide,
35 a compound of the invention, milveterol and ipratropium bromide,
a compound of the invention, milveterol and darotropium bromide,
a compound of the invention, salmeterol and glycopyrronium bromide,
a compound of the invention, salmeterol and aclidinium bromide,
a compound of the invention, salmeterol and tiotropium bromide,
40 a compound of the invention, salmeterol and ipratropium bromide,

- a compound of the invention, salmeterol and darotropium bromide,

a compound of the invention, carmoterol and darotropium bromide,
a compound of the invention, vilanterol and glycopyrronium bromide,
a compound of the invention, vilanterol and aclidinium bromide,
a compound of the invention, vilanterol and tiotropium bromide,
20 a compound of the invention, vilanterol and ipratropium bromide,
a compound of the invention, vilanterol and darotropium bromide,
a compound of the invention, olodaterol and glycopyrronium bromide,
a compound of the invention, olodaterol and aclidinium bromide,
a compound of the invention, olodaterol and tiotropium bromide,
25 a compound of the invention, olodaterol and ipratropium bromide, or
a compound of the invention, olodaterol and darotropium bromide,
and at least one pharmaceutically acceptable auxiliary.

- In a preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of
30 parts comprises a compound of the invention (in particular the compound of the invention is one of the
examples of the invention), a corticosteroid, an anticholinergic and at least one pharmaceutically ac-
ceptable auxiliary. In a particularly preferred embodiment, the above-mentioned fixed combination,
non-fixed combination or kit of parts comprise:
a compound of the invention, budesonide and glycopyrronium bromide,
35 a compound of the invention, budesonide and aclidinium bromide,
a compound of the invention, budesonide and tiotropium bromide,
a compound of the invention, budesonide and ipratropium bromide,
a compound of the invention, budesonide and darotropium bromide,
a compound of the invention, fluticasone and glycopyrronium bromide,

The above-mentioned triple combinations may preferably be used in the treatment or prophylaxis of bronchial asthma or COPD.

- Exemplary combinations, in particular for external topical administration (for example versus atopic dermatitis or psoriasis), may include a compound of the invention and an immunosuppressant, for example a calcineurin inhibitor, such as pimecrolimus or tacrolimus.

- Therefore, in another preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention or a pharmaceutically acceptable salt thereof), an immunosuppressant and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above mentioned fixed combination, non-fixed combination or kit of parts comprise:
- a compound of the invention and pimecrolimus,
a compound of the invention and tacrolimus,
40 a compound of the invention and methotrexate,

a compound of the invention and ascomycin, or
a compound of the invention and cyclosporin A,
and at least one pharmaceutically acceptable auxiliary.

- 5 The externally topically administrable immunosuppressant can be administered or administrable in a external-topical composition separately from the compound of the invention (non-fixed combination or kit of parts) or it can be contained with the compound of the invention in a combined externally-topically administrable composition (fixed combination). In a preferred embodiment the externally topically administrable composition is a cream containing pimecrolimus at ca. 1% w/w concentration. In another
10 preferred embodiment the externally topically administrable composition is an ointment containing tacrolimus at from about 0.03% to about 0.1% w/w concentration).

- Other combinations for external topical administration, in particular for the treatment or prophylaxis of atopic dermatitis and psoriasis, may include a compound of the invention and a corticosteroid. Beside
15 the corticosteroid combinations mentioned above also the following corticosteroid combinations may be useful.

- In another preferred embodiment, the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of
20 the examples of the invention or a pharmaceutically acceptable salt thereof), a corticosteroid and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment, the above mentioned fixed combination, non-fixed combination or kit of parts comprise:
a compound of the invention and prednisolone,
a compound of the invention and dexamethasone,
25 a compound of the invention and betamethasone, or
a compound of the invention and hydrocortisone,
and at least one pharmaceutically acceptable auxiliary.

- In another preferred embodiment, the above-mentioned corticosteroids are used in form of an ester,
30 such as, for example, prednisolone valerate acetate, hydrocortisone butyrate, hydrocortisone acetate, dexamethasone valerate, dexamethasone propionate, dexamethasone dipropionate, betamethasone butyrate propionate or prednisolone valerate acetate.

- Further combinations for external topical combination, in particular for the treatment of psoriasis, may
35 include a compound of the invention and a vitamin D analogue.

- Therefore, in another preferred embodiment the above-mentioned fixed combination, non-fixed combination or kit of parts comprise a compound of the invention (in particular the compound of the invention is one of the examples of the invention or a pharmaceutically acceptable salt thereof), a vitamin D analogue and at least one pharmaceutically acceptable auxiliary. In a particularly preferred embodiment,
40 the above mentioned fixed combination, non-fixed combination or kit of parts comprise:

a compound of the invention and calcitriol,
a compound of the invention and calcipotriol, or
a compound of the invention and tacalcitol,
and at least one pharmaceutically acceptable auxiliary.

5

In case, both (or all) combination partners – the compound of the invention as well as the therapeutic agent(s) – of the above-defined combinations are both (or all) suitable for inhalative administration, a preferred embodiment of the invention is the simultaneous inhaled administration of both (or all) combination partners by use of a combination inhalation device. Such a combination inhalation device can
10 comprise a combined pharmaceutical composition for simultaneous inhaled administration, the composition comprising both (or all) individual compounds of the particular combination.

In an alternative, the combination inhalation device can be such that the individual compounds of the particular combination are administrable simultaneously but are stored separately (or wholly or partly
15 separated for triple combinations), for example in separate pharmaceutical compositions.

In case of non-fixed combinations or kit of parts comprising at least one of the compounds of the invention and at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor
20 antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides, the
25 compound of the invention and the therapeutic agent may be administered by the same route, e.g., without limitation, by inhalation (or external topical), or by different routes, e.g., without limitation, the compound of the invention may be, for example, administered by inhalation and the therapeutic agent may be administered orally.

30 In case of co-administration of at least one compound of the invention with at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D
35 analogues, HMG-CoA reductase-inhibitors, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides, in form of a fixed combination, non-fixed combination or kit of parts the dose of the compound of the invention as well as the dose of the therapeutic agent will be in a range customary for the mono-therapy, it more likely being possible, on account of the individual

action, which are mutually positively influencing and reinforcing, to reduce the respective doses in case of co-administration of the compound(s) of the invention and the therapeutic agent.

In case of co-administration of at least one compound of the invention and at least one therapeutic compound selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides, in form of a fixed combination, a non-fixed combination or a kit of parts a single dose unit of the respective pharmaceutical composition/formulation can contain, in case of oral or parenteral administration 0.01 mg to 250 mg, preferably 0.05 mg to 100 mg, more preferably 0.05 mg to 10 mg, or in case of nasal or inhalative administration 0.001 mg to 10 mg, preferably 0.01 mg to 7.5 mg, more preferably 0.1 mg to 4 mg of the compound of the invention and from 0.01 mg to 4000 mg, preferably 0.1 mg to 2000 mg, more preferably 0.5 mg to 1000 mg, most preferably 1 mg to 500 mg, of the therapeutic agent, depending on the therapeutic agent being used the disease to be treated and the administration route selected. Preferably, the at least one compound of the invention and the at least one therapeutic agent are present in the pharmaceutical compositions/formulations in a weight ratio of from 1000:1 to 1:1000, more preferably in a weight ratio of from 100:1 to 1:100, even more preferably in a weight ratio of from 25:1 to 1:25.

Biological Investigations**Method for measuring inhibition of PDE4 activity**

5 The PDE4B1 (GB no. L20966) was a gift of Prof. M. Conti (Stanford University, USA). It was amplified from the original plasmid (pCMV5) via PCR with primers Rb18 (5'- CAGACATCCTAAGAGGGGAT -3') and Rb10 (5'- AGAGGGGGATTATGTATCCAC -3') and cloned into the pCR-Bac vector (Invitrogen, Groningen, NL).

10 The recombinant baculovirus was prepared by means of homologous recombination in SF9 insect cells. The expression plasmids were cotransfected with Baculo-Gold DNA (Pharmingen, Hamburg) using a standard protocol (Pharmingen, Hamburg). Wt virus-free recombinant virus supernatants were selected using plaque assay methods. After that, high-titre virus supernatants were prepared by amplifying 3 times. PDE4B1 was expressed in SF21 cells by infecting 2×10^6 cells/ml with an MOI (multiplicity of infection) between 1 and 10 in the serum-free SF900 medium (GIBCO Life Technologies, Karlsruhe, Germany). The cells were cultured at 28°C for 48 – 72 hours, after which they were pelleted for 5-10 min at 1000xg and 4°C.

The SF21 insect cells were resuspended, at a concentration of approx. 10^7 cells/ml, in ice-cold (4°C) homogenization buffer (20 mM Tris, pH 8.2, containing the following additions: 140 mM NaCl, 3.8 mM KCl, 1 mM EGTA, 1 mM $MgCl_2$, 10 mM β -mercaptoethanol, 2 mM benzamidine, 0.4 mM Pefablock, 10 μ M leupeptin, 10 μ M pepstatin A, 5 μ M trypsin inhibitor) and disrupted by ultrasonication. The homogenate was then centrifuged for 10 min at 1000xg and the supernatant was stored at -80°C until subsequent use (see below). The protein content was determined by the Bradford method (BioRad, Munich) using BSA (Bovine serum albumin) as the standard.

PDE4B1 activities were measured in a 96-well platform using SPA (scintillation proximity assay) yttrium silicate beads (RPNQ1050 from GE Healthcare). In a first step the PDE activity operated hydrolysis of either [3H] cAMP (substrate) into [3H] 5'AMP. In a second step substrate and product were distinguished following addition of SPA yttrium silicate beads. Indeed, in the presence of zinc sulphate the linear [3H] 5'AMP bound to the beads while the cyclic [3H] cAMP did not. Close proximity of bound [3H] 5'AMP then allowed radiation from the tritium to the scintillant within the beads resulting in a measurable signal while the unbound, hence distant [3H] cAMP did not generate this signal. The test volume was 100 μ l and finally contained 20 mM Tris buffer (pH 7.4), 0.1 mg /ml of BSA, 5 mM Mg^{2+} , 0.5 μ M cAMP (including about 50,000 cpm of [3H]cAMP) as substrate, 1 μ l of the respective substance dilution in DMSO and sufficient recombinant PDE (1000xg supernatant, see above) to ensure that 10-20% of the cAMP was converted under the said experimental conditions. The final concentration of DMSO in the assays (1 % v/v) did not substantially affect the activity of the PDE investigated. After a preincubation of 5 min at 37°C, the reaction was commenced by adding the substrate (cAMP) and the assays were incubated for a further 15 min. Reactions were terminated by adding SPA beads (50 μ l). In agreement with the manufacturer's instructions, the SPA beads had previously been resuspended in

water, but were then diluted 1:3 (v/v) in water. This diluted solution further contained 3 mM IBMX (iso-butylmethylxanthine) to ensure a complete block of PDE activity. Once the beads were sedimented (> 30 min), the MTP's (micro titerplate) were analyzed in commercially available luminescence detection devices. The corresponding IC₅₀ values of the compounds for inhibition of PDE4B1 activity were determined from the concentration-effect curves by means of non-linear regression.

For the following compounds PDE4B1 inhibitory values [measured as -logIC₅₀ (mol/l)] below 8, between 8 and 9 and above 9 have been determined. The numbers of the compounds correspond to the numbers of the examples.

Method for measuring inhibition of PDE5 activity

As a source for human PDE5, platelets were used. For that purpose, 150 ml fresh blood from human donors anticoagulated with citrate [final concentration 0.3% (w/v)] was centrifuged at 200 g for 10 min to obtain the so-called platelet-rich-plasma (PRP) as a supernatant. 1/10 volume of ACD solution (85 mM Na₃-citrate, 111 mM D-glucose, 71 mM citric acid, pH 4.4) was added to 9/10 volume of PRP. After centrifugation (1,400 g, 10 min) the cell pellet was resuspended in 3 ml homogenization buffer (NaCl 140 mM, KCl 3.8 mM, EGTA (ethylene glycol tetraacetic acid) 1mM, MgCl₂ 1mM, Tris-HCl 20 mM, beta-mercaptoethanol 1mM, pH 8.2) plus protease-inhibitor mix resulting in final concentrations of 0.5 mM Pefablock (Roche), 10 µM Leupeptin, 5 µM Trypsine inhibitor, 2 mM Benzamidin and 10 µM Pepstatin A. The suspension was sonicated and thereafter centrifuged for 15 min at 10,000 g. The resulting supernatant (platelet lysate) was used for enzymatic assays.

PDE5 activities were measured in a 96-well platform using SPA (scintillation proximity assay) yttrium silicate beads (RPNQ1050 from GE Healthcare). In a first step the PDE activity operated hydrolysis of either [³H] cGMP (substrate) into [³H] 5'GMP. In a second step substrate and product were distinguished following addition of SPA yttrium silicate beads. Indeed, in the presence of zinc sulphate the

linear [^3H] 5'GMP bound to the beads while the cyclic [^3H] cGMP did not. Close proximity of bound [^3H] 5'GMP then allowed radiation from the tritium to the scintillant within the beads resulting in a measurable signal while the unbound, hence distant [^3H] cGMP did not generate this signal. The test volume was 100 μl and contained 20 mM Tris buffer (pH 7.4), 0.1 mg of BSA (bovine serum albumin)/ml, 5 mM Mg^{2+} , 1 μM motapizone (PDE3 Inhibitor), 10 nM PDE2 inhibitor 2-(3,4-dimethoxybenzyl)-7-[(1*R*,2*R*)-2-hydroxy-1-(2-phenylethyl)propyl]-5-methylimidazo[5,1-*f*][1,2,4]triazin-4(3*H*)-one, 0.5 μM cGMP (cyclic guanosine monophosphate) (including about 50,000 cpm of [^3H]cGMP as a tracer) (substrate), 1 μl of the respective compound dilution in dimethylsulfoxide (DMSO) and sufficient PDE5-containing platelet lysat (10,000 \times g supernatant, see above) to ensure that 10-20% of the cGMP was converted under the said experimental conditions. The final concentration of DMSO in the assay (1% v/v) did not substantially affect the activity of the PDE investigated. After a preincubation of 5 min at 37°C, the reaction was commenced by adding the substrate (cGMP) and the assay was incubated for a further 15 min. The reaction was terminated by adding SPA beads (50 μl). In agreement with the manufacturer's instructions, the SPA beads had previously been resuspended in water, but were then diluted 1:3 (v/v) in water. This diluted solution also contained 3 mM 8-methoxymethyl-3-isobutyl-1-methylxanthine (IBMX) to ensure a complete block of PDE activity. Once the beads were sedimented (> 30 min), the MTP's were analyzed in commercially available luminescence detection devices. The corresponding IC_{50} values of the compounds for inhibition of PDE activity were determined from the concentration-effect curves by means of non-linear regression.

For the following compounds PDE5 inhibitory values [measured as $-\log\text{IC}_{50}$ (mol/l)] below 8, between 8 and 9 and above 9 have been determined. The numbers of the compounds correspond to the numbers of the examples.

In Vivo Assay: LPS-induced pulmonary inflammation model in rats (Method A+B)

Introduction

Exposure of rats to aerosolized lipopolysaccharide (LPS) causes a pulmonary mainly neutrophilic inflammation, which can be assessed by bronchoalveolar lavage (BAL). LPS-induced pulmonary inflam-

mation models are robust and are commonly used for the evaluation of test compounds modulating the immediate immune response. Selective phosphodiesterase-4 inhibitors are administered by intratracheal instillation 1 h prior nose-only LPS challenge in rats. The anti-inflammatory activity of the selective phosphodiesterase inhibitors is assessed based on pulmonary total leukocyte and neutrophil counts in the bronchoalveolar lavage fluid 4 h after LPS exposure

Materials and Methods

Animals

Male Sprague Dawley rats weighing 200 - 300 g were used. Rats were delivered 1 week prior to the experiments and had free access to water and food.

Intratracheal compound instillation

Compound preparation

The test compound was suspended in Aqua ad injectabilia (Braun, Melsungen, Germany) or 0.9 % NaCl (Saline) (Braun, Melsungen, Germany) supplemented with 0.02% Tween20 (Sigma-Aldrich, Schnellendorf, Germany) for intratracheal administration. Suspensions of test compound were treated in an ultrasonic bath or a Covaris S2x high-energetic ultrasonic bath (KBiosciences, Hoddesdon Herts, UK) to obtain a homogenous suspension. The aimed doses were prepared by dilution series from the stock suspension, which was prepared for the administration of the highest dose in each experiment.

Compound instillation technique (Method A)

The compound suspension was administered intratracheally via a microsyringe device (Penn Century, distributed by EMMS, Bordon Hants, UK). Therefore, the rats were intubated by inserting the microsyringe into the trachea. The length of the microsyringe device was adjusted to avoid disruption of the tracheal bifurcation. The intubation was guided by sight and was done under a short time isoflurane anesthesia. A syringe, filled with the compound suspension, was connected to the microsyringe device via the Luer Lock adapter and the compound suspension was directly administered to the lungs.

Compound instillation technique (Methode B)

The compound suspension was administered intratracheally. The intubation was guided by sight and was done under a short time isoflurane anesthesia. The compound suspension was administered to the lungs by liquid instillation. Therefore, the trachea was intubated with a device consisting of a catheter which contained a blunted cannula (size 14G, Dispomed, Gelnhausen, Germany). The length of the catheter was adjusted to avoid disruption of the tracheal bifurcation. A 1 ml syringe, filled with the compound suspension and air, was connected to the intubation device via the Luer Lock adapter and the whole content of the syringe was directly administered to the lungs.

Compound dosing

The administered volume of the compound suspension was 0.5 – 1ml/kg. Control animals received drug-free Aqua/Tween20 or NaCl/Tween20 solution as placebo. Test compounds and placebo were administered 1 h prior to LPS challenge.

5 LPS challenge

Conscious and restrained animals were connected to a nose-only exposure system (CR equipment SA, Tannay, Switzerland) and were exposed to the LPS aerosol for 30 min. The LPS-containing aerosol was generated using a compressed air driven medication nebulizer device (Pari master in combination with Pari LC Sprint Star, Pari GmbH, Starnberg, Germany). The LPS solution (E. coli, Serotype 10 055B5, Art.# L2880, Lot# L048K4126 or 109K4075, Sigma-Aldrich, Germany, 1 mg/ml - 3 mg/ml diluted in Phosphate-Buffered Saline (PBS)) was prepared 30 minutes in advance. The aerosol was dispersed and transported to the exposure tower by a sheath air flow of 600l/h. All rats except negative controls were exposed to LPS.

15 Bronchoalveolar lavage

4 hours after LPS challenge, animals were anesthetized by isoflurane and sacrificed by cervical dislocation. BALs were performed. For the BAL, the trachea was exposed and cannulated, followed by gently lavage of the lungs two times in situ with 5 ml PBS buffer supplemented with 0.5% Bovine Serum Albumin (Serva, Darmstadt, Germany).

20

Total and differential cell counts

Determination of total leukocyte and neutrophil counts in BAL fluid was performed with an automated haemocytometer (XT-2000iV, Sysmex, Norderstedt, Germany).

25 Data Analysis

The baseline correction was done for each sample according to the formula:

$$\text{Baseline-corrected cell count value} = \text{cell count} - \text{Median (negative control group)}$$

30 All further calculations were performed with the baseline-corrected values.

The effect of a compound on LPS-induced total cell and neutrophil influx into the lungs was calculated in % using the median of the cell count of each treatment group in relation to the median of the control group according to the formula:

35
$$\% \text{ effect} = (Y-K)/K \cdot 100$$

With defining:

Y= Median of the baseline-corrected cell count value of compound-treated group

K= Median of the baseline-corrected cell count value of placebo-treated group

40

Statistical analysis was performed on the primary cell count data using one-way ANOVA and Dunnett's multiple comparison post test vs. positive control. The Grubbs test was used to detect statistical outliers.

5

Exemplary Results for compounds tested using Method A (the numbers of the compounds correspond to the numbers of the examples):

10 The **compounds 60 and 61** showed at a dosage of 1 mg/kg a reduction in the range of 28 to 55 % of the total cell count, respectively a reduction in the range of 27 to 49 % of neutrophils in comparison to the placebo group.

15 **Exemplary Results for compounds tested using Method B** (the numbers of the compounds correspond to the numbers of the examples):

The compounds **17, 31 and 59** showed at a dosage of 1 mg/kg a reduction in the range of 36 to 75 % of the total cell count, respectively a reduction in the range of 30 to 67 % of neutrophils in comparison to the placebo group.

1. A compound of formula (1)

wherein

R1 represents a phenyl derivative of formulae (a) or (b)

wherein

R2 is 1-4C-alkoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,

R3 is 1-4C-alkoxy, 3-5C-cycloalkoxy, 3-5C-cycloalkoxymethoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,

R4 is 1-4C-alkoxy or 1-4C-alkoxy predominantly or completely substituted by fluorine,

R5 is 1-4C-alkyl,

R6 is hydrogen or 1-4C-alkyl

or wherein R5 and R6 together and with inclusion of the two carbon atoms, to which they are bonded, form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring, optionally interrupted by an oxygen or sulphur atom,

R7 is hydrogen,

- R8 is 1-4C alkyl,
or R7 and R8 together form a 3C- to 5C-alkylene group,
R9 is hydrogen or 1-4C alkyl,
or wherein R8 and R9 together and with inclusion of the carbon atom, to which they are bonded,
5 form a spiro-linked 5-, 6- or 7-membered hydrocarbon ring,
m is 1 or 2,
R10 is independently from each other hydrogen, 5-7C-cycloalkyl, 1-6C-alkyl, -CH(CH₃)-R11 or
-CH₂-R12,
wherein
10 R11 is unsubstituted phenyl or hydroxyl,
R12 is hydroxyl, 5-7C-cycloalkyl, -N-(1-2C-alkyl)₂, -CH₂-S-(1-2C-alkyl), unsubstituted
phenyl, phenyl substituted by R13, phenyl substituted by R13 and R14,

7. A compound of formula (1) according to any of claims 1 to 6 for use in the treatment or prophylaxis of diseases.
8. Pharmaceutical composition comprising at least one of the compounds of formula (1) or a stereoisomer of the compound or a salt thereof according to any one of claims 1 to 6 together with at least one pharmaceutically acceptable auxiliary.
9. Fixed combination, non-fixed combination or kit of parts comprising at least one compound of formula (1) or a stereoisomer of the compound or a salt of the compound or a salt of a stereoisomer of the compound according to any one of claims 1 to 6, at least one therapeutic agent selected from the group consisting of corticosteroids, anticholinergics, β_2 -adrenoreceptor agonists, H1 receptor antagonists, leukotriene receptor antagonists, 5-lipoxygenase inhibitors, endothelin receptor antagonists, prostacyclines, calcium channel blockers, beta-blockers, type 4 phosphodiesterase inhibitors, type 5 phosphodiesterase inhibitors, immunosuppressants, vitamin D analogues, HMG-CoA reductase-inhibitors, lung surfactants, antibiotics, guanylyl-cyclase activators/stimulators, tetrahydrobiopterin and tetrahydrobiopterin derivatives, anticoagulants, diuretics, pirfenidone and digitalis glycosides, and at least one pharmaceutically acceptable auxiliary.
10. Use of a compound of formula (1) or a stereoisomer of the compound or a salt thereof according to any one of claims 1 to 6 in the manufacture of a pharmaceutical composition inhibiting type 4 and type 5 phosphodiesterase.
11. Use of a compound of formula (1) or a stereoisomer of the compound or a salt thereof according to any one of claims 1 to 6 in the manufacture of a pharmaceutical composition for the treatment or prophylaxis of an acute or chronic airway disease.
12. Use according to claim 11, wherein the acute or chronic airway disease is selected from the group consisting of interstitial lung disease, pulmonary fibrosis, cystic fibrosis, bronchial asthma, chronic bronchitis, emphysema, chronic obstructive pulmonary disease (COPD) and COPD associated with pulmonary hypertension.

13. A compound of formula (1) or a stereoisomer of the compound or a salt thereof according to any one of claims 1 to 6 for use in the treatment or prophylaxis of an acute or chronic airway disease.
14. A compound of formula (1) or a stereoisomer of the compound or a salt thereof according to claim 13, wherein the acute or chronic airway disease is selected from the group consisting of interstitial lung disease, pulmonary fibrosis, cystic fibrosis, bronchial asthma, chronic bronchitis, emphysema, chronic obstructive pulmonary disease (COPD) and COPD associated with pulmonary hypertension.
15. Method of treating or preventing a disease, which is alleviated by inhibition of the type 4 and type 5 phosphodiesterase comprising administering to a patient in need thereof a therapeutically effective amount of a compound of formula 1 or a stereoisomer of the compound or a salt thereof according to any one of claims 1 to 6.
