TWIN SWEATER SET
Walter Berger, New York, N. Y.

Application September 29, 1936, Serial No. 103,097

3 Claims. (Cl. 2-30)

The outer sweater has sleeve constructions 14 of raglan or straight effect, depending on the design desired. The outer sweater is also provided with a collar 15. In the instant form of the invention the sleeves 16 of the inner sweater 10 are short. The outer sweater is formed with a front opening 17, the top portion of which is held closed with a link element 18, or frog element, or similar closure element. The lower corners 19 of the outer sweater at the front are of square design.

The inner sweater 10 preferably should be form-fitting to engage around one's waist. The outer sweater is adapted to give a cape effect.

In the form of the invention shown in Figs. 3 and 4 there is a provision by which the opening 17 of the outer sweater may be set to various conditions. In each of the corners 19 of the outer sweater there is a pair of straps 20 and 20' attached at their outer ends to the bottom edge portion of the outer sweater and extended towards each other.

The inner ends of these straps connect with a buckle construction 21 provided with holding elements 22 cooperative with the straps to hold them in various adjusted positions. Thus, the corners may be allowed to remain flat or may be contracted to different degrees so as to produce folds along the front.

The buckle element 21 is provided with a snap fastener element 23 which is engageable with one of several fastener elements 24, 24', 24'', etc., arranged in a horizontal row and attached on the inner sweater 10. In addition to gathering the corners of the outer sweater, it is possible to locate the buckle 21 at various positions and so control the openings of the front of the outer sweater.

While I have illustrated and described the preferred embodiments of my invention, it is to be understood that I do not limit myself to the precise constructions herein disclosed and the right is reserved to all changes and modifications coming within the scope of the invention as defined in the appended claims.

Having thus described my invention, what I claim as new, and desire to secure by United States Letters Patent is:

1. A twin sweater set comprised of an inner sweater and an outer open sweater associated therewith and producing a cape effect, the bottom corners of the front opening of said sweater being square, and each bottom corner being provided with a pair of straps attached at their outer ends to spaced portions of the middle of
the outer sweater, on the inner face thereof and extended towards each other, a buckle for holding said straps in relative positions, and coacting elements on the buckle and on the inner sweater for holding the buckle in various relative positions to the inner sweater.

2. A twin sweater set comprising an inner sweater and an outer open sweater associated therewith and producing a cape effect, the bottom corners of the front opening of said outer sweater being square, and each bottom corner being provided with a pair of straps attached at their outer ends to spaced portions of the middle of the outer sweater, on the inner face thereof and extended towards each other, a buckle for holding said straps in relative positions, and coacting elements on the buckle and on the inner sweater for holding the buckle in various relative positions to the inner sweater, said latter means comprising a snap fastener element on the buckle engageable with complementary snap fastener elements on the inner sweater.

3. A twin sweater set comprising an inner sweater and an outer open sweater associated therewith and producing a cape effect, the bottom corners of the front opening of said outer sweater being square, and each bottom corner being provided with a pair of straps attached at their outer ends to spaced portions of the middle of the outer sweater, on the inner face thereof and extended towards each other, a buckle for holding said straps in relative positions, and coacting elements on the buckle and on the inner sweater for holding the buckle in various relative positions to the inner sweater, said latter means comprising a snap fastener element on the buckle engageable with complementary snap fastener elements on the inner sweater.

WALTER BERGER.
