UNITED STATES PATENT OFFICE.

ERNST MAX WUTZLER, DECEASED, LATE OF SCHWARZENBERG, GERMANY, BY MILDA MARIE WUTZLER, NÉE WEISSFLOG, ADMINISTRATRIX, OF SCHWARZENBERG, GERMANY, ASSIGNOR TO METALLSTANZWERK G. M. B. H., OF SCHWARZENBERG, SAXONY, GERMANY, A FIRM.

DRAWING-PIN.

1,059,256.

Specification of Letters Patent.

Patented Apr. 15, 1913.

Original application filed January 26, 1911, Serial No. 604,913. Divided and this application filed October 21, 1912. Serial No. 727,058.

To all whom it may concern:

Be it known that ERNST MAX WUTZLER, deceased, in his lifetime a resident of Schwarzenberg, Saxony, Germany, and a subject of the King of Saxony and Emperor of Germany, previous to his death had invented certain new and useful Improvements in Drawing-Pins, of which I, MILDA MARIE WUTZLER, née WEISSFLOG, a resident of Schwarzenberg, Saxony, and a subject of the King of Saxony and Emperor of Germany, administratrix of the estate of the said late ERNST MAX WUTZLER, present the following full, clear, and exact specification.

The present invention relates to a drawing pin and this case is a division of application Serial No. 604,913, filed Jan. 26, 1911.

The known drawing pins, the point of which is stamped out of the head have hitherto been made in such a manner, that the point is stamped as a straight tapering piece out of the head, and then compressed from the sides so as to have a proper length, as the semidiameter of the head is not large enough for allowing of stamping the point of the proper length at once from the head.

The present invention relates to a drawing pin, the point of which is stamped out at once of the proper length from the head. This is obtained by stamping the point of a curved and not of a straight shape.

The accompanying drawing illustrates in

Figure 1 a sectional view and in Fig. 2 a plan view of such a drawing pin according to the present invention.

In this drawing *a* is the head of the drawing pin, *b* is the point which is bent into a straight line after it has been stamped out of the head *a*, and *c* is the curved hole in the head, left by stamping out the point *b*.

Drawing pins of the character here described may of course be made of any size and thickness and also of any suitable material.

Having now described the invention what I claim and desire to secure by Letters Patent of the United States is:

A drawing tack or pin comprising a circular disk-like head having a prong or pin struck out therefrom, said prong being of greater length than the radius of the head, but having about the same thickness as the falcate slot of the head whence it has been stamped out.

In testimony whereof I have hereunto set my hand in presence of two subscribing witnesses.

MILDA MARIE WUTZLER NÉE WEISSFLOG,
Administratrix of the estate of Ernst Max Wutzler,
deceased.
