William Wilson of Greenfield and State of Massachusetts

The Schedule referred to in these Letters Patent and making part of the same containing a description in the words of the said William Wilson himself of his improvement in the manufacture & construction of the Andiron.

Be it known, that I William Wilson of Greenfield, in the County of Franklin & Commonwealth of Massachusetts, have invented a new and useful improvement in the Andiron, & that the following is a full & exact description of the construction of the said Andiron, as invented or improved by me viz. ——— The improvement consists wholly in manufacturing and constructing (of cast or wrought iron, or copper or brass) the front or upright part & the bar & foot, separate and distinct from each other, to be united by inserting the bar in the upright part by means of a Dove tail constructed upon the principle of the wedge, thus forming a complete and perfect Andiron.
