Method for transferring designs and patterns.

A method of transferring designs and patterns using an electrostatic recording paper. A desired pattern is printed, hand drawn or copied on the electrostatic recording paper, thus producing a transfer paper. The transfer paper is pasted on a surface of an object via an adhesive, and then the recording paper is wet by water or some other liquid and peeled off, thus leaving the pattern on the surface of the object. A synthetic resin protective film is applied on the surface of the pattern on the object. The objects which receive the transfer of the desired designs and patterns are made can be any including floors, walls, glass windows, ceilings, walls, fences, etc. of completed buildings and the inside and outside surfaces of elevators, vehicles, etc.
