Patented Dec. 19, 1922. 1,439,400

UNITED STATES PATENT OFFICE.

GEORGE F. BROZ, OF SAN FRANCISCO, CALIFORNIA.

PRICE-MARKING DEVICE.

Application filed September 16, 1920. Serial No. 410,762.

To all whom it may concern:

Be it known that I, GEORGE F. BROZ, a citizen of the United States, residing in the city and county of San Francisco and State of California, have invented a new and useful Improvement in a Price-Marking Device, of which the following is a specification.

My invention relates to improvements in price marking devices wherein tabs imprinted with a unit of measurement are detachably secured to the leaves of price marking pads for marking a price either as an article or by unit of measure.

The primary object of my invention is to provide an improved price marking device adapted to facilitate the marking of price upon goods displayed for sale.

Another object of my invention is to provide an improved price marking pad adapted to mark either the price of an article or the price of a unit measure of the product.

I accomplish these and other objects by means of the device disclosed in the drawings forming a part of the present specification wherein like characters of reference are used to designate similar parts throughout said specification and drawings, and in which:

Fig. 1 is a perspective view of one of my improved price marking pads.

Fig. 2 is a plan view of a tray fitted with a plurality of pads for marking articles of different price.

Referring to the drawings the numeral 1 is used to designate in general a price marking pad comprising a plurality of leaves 2 imprinted with a price mark 3 in any desired denomination. The leaves 2 are gummed or otherwise secured at the top to form a pad. A tab 4 is formed at the bottom of each leaf 2 by perforations 6 extending transversely across the leaf, each tab 4 being imprinted with a unit of measurement 7 of any desired character.

A tray 8 is provided longitudinal partitions 9 and transverse partitions 11 to form a plurality of compartments each adapted to receive a price marking pad 1. The size of the tray 8 and number of compartments therein is arranged to accommodate pads of the desired number of denominations. The longitudinal partitions 9 are provided with recessed 12 to facilitate the removal of the pads 1 or leaves 2 therefrom.

While, for purpose of illustration, I have disclosed pads in denominations from 5 cents to one dollar at intervals of 5 cents for marking in pounds, I do not restrict myself to this specific disclosure as obviously any price denomination may be employed in connection with any unit of measure without departing from the spirit of my invention.

My invention is particularly designed for use in marking goods the price of which varies from day to day, or upon which a special price has been set to which it is desired to attract the attention of the purchaser. This marking is most easily accomplished by use of my improved price marking device wherein the pads of various denominations are retained in a convenient and orderly form adapted to facilitate the removal of a price mark from any desired pad. The leaves 2 are used to denote the price of a unit measure of a product such as a pound, quart or yard. When it is desired to mark the price of merchandise as single articles the tab 4 is detached from the leaf 2 through the perforations 6, thereby providing a price mark without reference to any unit.

Having thus described my invention what I claim as new and desire to secure by Letters Patent is:

In a price marking device, a pad formed from a plurality of leaves; a price mark imprinted upon each leaf; a detachable tab formed upon each leaf by perforations extending transversely across said leaf; and a unit of measurement imprinted upon each tab.

In witness whereof I hereunto set my signature.

GEORGE F. BROZ.
