UNITED STATES PATENT OFFICE.

ANNA FREDERICKSON, OF WESTERN SPRINGS, ILLINOIS.

WARDROBE-TREE.

992,764.

Specification of Letters Patent.

Patented May 23, 1911.

Application filed April 3, 1911. Serial No. 618,647.

To all whom it may concern:

Be it known that I, ANNA FREDERICKSON, a citizen of the United States, residing at Western Springs, in the county of Cook and State of Illinois, have invented certain new and useful Improvements in Wardrobe-Trees, of which the following is a specification.

This invention relates to new and useful improvements in wardrobe trees and its object is to construct a device of this class adapted to be secured by its base to the wall of a room or to any vertical surface, the body portion being capable of independent movement with relation to the base.

Another object is durability and another is the provision of a device of this class that will occupy the minimum amount of space when in use.

With the foregoing and other objects in view the invention consists in the combination and arrangement of parts to be hereinafter fully described in the following specification, pointed out in the claims and illustrated in the accompanying drawing which forms a part of said specification, and in which—

Figure 1 is a side elevation of the device with the body or tree portion shown in two positions. Fig. 2 is an end view. Fig. 3 is a cross section taken on line 3—3 of Fig. 1. Fig. 4 is a section on line 4—4 of Fig. 1.

Like reference characters indicate corresponding parts throughout the several views.

2 is the base which may be of any shape desired and which is designed to be fastened upon the wall or any vertical surface in any suitable manner and to which is secured a slotted standard 3 by a swivel 4 so that it may be rotated on said base.

5 is the tree or body portion of the device which has a tail piece 6 mortised in one extremity, the opposite end of said tail piece being secured in the slotted standard 3 by a set screw 7.

A plurality of annular recesses 8 are provided on the body portion about which a

circular collar 9 may be removably secured by means of a set screw 10 operating through an aperture in the said collar and which enters the aforesaid annular recess. A screw-eye 11 is secured to the collar 9 and from said screw-eye a garment hanger 12 may be suspended and garments hung thereon. This wardrobe tree will be found very serviceable when placed above a radiator as the body portion can then project over the radiator and the garment hangers will depend from this portion and wet garments may be suspended above the radiator to dry.

When desired the body portion may be disposed in a vertical position, in which position it is shown in dotted lines in Fig. 1, by rotating the standard 3 through an arc of 45° degrees and then raising the tree to a vertical position when the device will take up the minimum amount of space and accommodate a number of garments.

What I claim is:—

1. A wardrobe tree comprising a base, a slotted standard rotatably secured to said base, a body portion provided with annular recesses secured to said standard, a collar removably secured to said body portion directly opposite said annular recesses and a screw-eye secured in said collar.

2. A wardrobe tree comprising a base, a slotted standard rotatably secured to said base, a body portion provided with a plurality of annular recesses and having a tail piece mortised in one extremity; said tail piece being movably secured within the aforesaid slotted standard, a collar removably secured to the body portion directly opposite the annular recesses and a screw-eye secured to said collar.

In testimony that I claim the foregoing as my own I have hereto affixed my signature in the presence of two subscribing witnesses.

ANNA FREDERICKSON.
