UNITED STATES PATENT OFFICE.

JEANIE P. CLARKE AND JAMES W. CLARKE, OF BOSTON, MASSACHUSETTS.

GAME.

SPECIFICATION forming part of Letters Patent No. 398,233, dated February 19, 1889.

Application filed June 26, 1888. Serial No. 278,227. (No model.)

To all whom it may concern:

Be it known that we, JEANIE P. CLARKE and JAMES W. CLARKE, both of Boston, in the county of Suffolk, State of Massachusetts, have invented a certain new and useful Improvement in Games, of which the following is a description sufficiently full, clear, and exact to enable any person skilled in the art or science to which said invention appertains to make and use the same, reference being had to the accompanying drawings, forming part of this specification, in which—

Figure 1 is a top plan view of the board employed in my improved game, and Fig. 2 detail views of the implements used in playing the same.

Like letters and figures of reference indicate corresponding parts in the different figures of the drawings.

My invention relates to games which may be played with cards especially designed for the purpose, being entitled "The Game of Politics, or the Race for the Presidency," and based upon the electoral vote of the different States, the object being to furnish a more instructive and entertaining amusement of this character than has heretofore been produced.

The nature and operation of the invention will be readily understood by all conversant with such matters from the following explanation.

In the drawings, A represents the board, and B a set of the cards employed in playing the game, six sets being required.

The board may be constructed in any form desired, but is preferably rectangular in shape, and is designed to be folded in the center to enable it to be more conveniently stored when not in use or transported from place to place.

On the face of the board a parallelogram or space, C, is marked off or formed, in which are printed the names of the different States arranged in alphabetical order. Opposite the names of the States, and at either end thereof, are printed numerals which respectively represent the number of electoral votes to which the States are entitled, the sum total (401) of the columns of numerals thus formed being respectively shown at the bottom of the columns, with the words "Majority Needed to

Win the Game, 201," below them. Opposite the numerals of each State, and at each side of the space C, is formed a scoring-point, which may be in the form of a peg-hole, *x*, for the reception of the pegs *m*. At the head of the column of States are the words "Electoral Votes by States," and at the foot of said column, beneath the words "Majority Needed," &c., is the word "Nomination." A figure, D, in imitation of a ladder, is printed on the board A below the space C, the spaces between the rungs of said ladder being respectively marked "U. S. Senate," "Joint Vote," "Vote of Senate," "Vote of House," and "Nomination." At the left of the lower end of said space is a cut or print representing a chair, which is designated "Mayor's Chair," and in a corresponding position at the right of said space a similar chair is disposed, which is designated "Congressman's Chair." At each side of the space C, and arranged in parallelism therewith, is printed the representation of a ladder, G H, the upper end of the ladder G being disposed at the Mayor's chair and the upper end of the ladder H at the Congressman's chair. Beginning at the lower ends of the ladders G H, respectively, the spaces formed by the lower rungs are denominated "Nomination," and the five succeeding spaces formed by the rungs are marked with numerals from 1,000 to 5,000, respectively. The seventh space is designated by the word "Withdrawn," and the succeeding spaces in the ladders are numbered from 7,000 to 20,000, respectively. At the upper left-hand corner of the board is shown a chair, which is designated the "Governor's Chair," and extending transversely across the board from said chair, and at right angles to the ladders G H, is the representation of a similar ladder, K, the spaces between the rungs of which are marked in the same manner as the ladders G H, excepting that the numerals extend to 40,000. The space between the top of the parallelogram C and the ladder K is designated by the words "White House."

The cards B (shown in Fig. 2) constitute a set—six sets, or a pack consisting of forty-eight cards, being employed in playing the game. Eight cards in the pack are numbered

1,000, eight 2,000, eight 3,000, eight 5,000, eight 7,000, and eight 10,000, as shown in Fig. 2.

Two buttons or "wads," *v. g.*, of different colors, are used to designate the two predominating political parties, the pegs *m* being employed to score the different States won in the progress of the game. Equivalent scorers may be employed for indicating the progress of the game.

The game must be contested by two, four, or six persons, and is played according to the following

RULES.

1. If only two play, open the board and let one player sit opposite the other. If four or six persons play, they must play as partners—two or three Republicans against two or three Democrats.

2. Whenever four or six persons play they must be seated so that a Republican sits next to a Democrat all the way round the board.

3. Shuffle the cards well, draw for first deal, and let the deal pass from the first dealer to the player next on his left and in rotation.

4. Deal out the entire pack of forty-eight cards, giving each player an equal number of cards—twenty-four apiece if two play, twelve apiece if four play, and eight apiece if six play.

5. Pick up and arrange your cards, putting the cards of each number together, so as to know what your hand is. Choose either the blue or red wad to represent the Democrat or Republican candidate, as you prefer. If the blue wad is the Democrat, then the red will of course stand for the Republican, and vice versa.

6. The player next on the left of the dealer begins by throwing any card he pleases from his hand. The next player to him, being a member of the opposing party, must play on the first player's card. This completes one play. The player who first throws a higher card than his opponent enters a candidate on the space marked "Nomination."

7. Thus, for example, A (a Republican) leads off with a 5,000 card; B (a Democrat) plays a 7,000 card on it. That entitles B to put one of the round wads (either the red or the blue) on the space marked "Nomination" at the foot of the ladder leading to the Mayor's chair; but if A plays 5,000 and B 1,000, then A is entitled to enter his candidate. If A plays 5,000 and B 5,000, it is a tie and neither can enter.

8. As soon as any player plays a card higher than the player of the other side against whom he plays, he can enter his side's candidate and not before.

9. Having entered the candidate, the aim is to push him along up the ladder till he is elected—that is, until he reaches the chair at the top of the ladder. Each player throws his card in his turn, and his next neighbor to

the left throws a card against it. The majority card carries it, and the candidate of that side is pushed up the ladder by the amount only of the majority.

10. To illustrate: A, B, C, D, E, and F (six players) sit around the board in the order named. Then, under rule 3, A, C, and E are Republicans, and B, D, and F are Democrats. We will suppose that A is the leader; in that case B (a Democrat) leads off; B throws a card, and C (a Republican) throws a card against it. The highest card, we will suppose, is B's, which nominates a Democratic candidate. Then C (a Republican) throws a card, and B (a Democrat) throws a card against it. The highest card of these two, we will suppose, is thrown by C, and that nominates a Republican candidate. Then it is the turn of E (a Republican) to throw a card, against which F (a Democrat) must throw a card. Suppose F throws a 5,000 card and E a 3,000 card. Then the Democratic candidate has 2,000 majority and is advanced 2,000 on the ladder.

11. The play goes on in this way, turn after turn—one player of one side against one of the other, the majority on each play being scored for the side that makes it by advancing the blue or red wad up the ladder until the hand is played. Then shuffle, deal again, and play as before.

12. Having put a man into the Mayor's chair, the next majority scored by that side carries the man on to the next space marked "Nomination" at the foot of the next ladder, and the scoring goes on as before. No majority, however large, will carry a candidate beyond a chair on any one move. For example, if a candidate needs 2,000 to reach one of the chairs, and one of the players of that side scores 9,000 majority, it simply puts him into the chair. It does not carry him any farther.

13. As fast as a candidate reaches one chair he can be nominated or entered for the next directly one of the players on that side throws a higher card than his opposing player, but always in this order: from the Mayor's chair to the foot of the Governor's ladder, from the Governor's chair to the foot of the Congressman's ladder, from the Congressman's chair to the foot of the steps leading to the United States Senate, and from the United States Senate to the "Nomination" space at the foot of the list of States.

14. On each of the first three ladders (the Mayor, Governor, and Congressman) the sixth round (6,000) is marked "Withdrawn." If one of the two candidates gets a majority which, being scored, brings him to this space marked "Withdrawn," he is thereby put off that ladder, and can only be entered again when some player on that side has scored a majority over a player opposed to him on the other side. A player will strive, therefore, to avoid throwing such a card as will enable his opponent to

throw one against it that will leave him just majority enough to bring his candidate up to 6,000.

15. The United States Senate Chamber is not reached by the ladder. As in real politics so in this game a United States Senator is elected by the vote of the Legislature. First the vote of the House of Representatives of his State is taken, then the vote of the Senate of his State, and then they go into what is called "Joint Convention," and he must have a majority on the joint ballot—that is, a majority of two bodies voting together as one body. When the turn of a player comes who has a candidate entered for the United States Senate, he simply plays against his opponent, as usual, and if the majority is on his side he advances his man on to the first space marked "Vote of the House." He has carried that one step. If the majority is with his opponent, the latter advances his man instead or scores his majority on his candidate upon any other ladder. The "Vote of the Senate" is carried in the same way, and so is the "Joint Vote"—that is, a majority on one play between two opposing players carries each of these three steps that lead to the Senate Chamber, and when the "Joint Vote" step is reached that is equal to election and the candidate of the blue or red wad is put inside the Senate Chamber. The next majority scored on his side nominates him for the Presidency.

The Presidential Race.

16. The Presidency in real politics is carried by the candidate who obtains a majority of the electoral votes of all the States. The total of the electoral vote of all the States is 401. Therefore 201 is necessary to elect a President. This game exactly reproduces this feature of our governmental system. In the center of the board the States are named in alphabetical order. Opposite the name of each State is the number of its electoral votes. The number of its electoral votes is given twice—once on the right, once on the left hand. This is for convenience in scoring. Peg-holes are placed at the side of each number. As one side or the other in the game gains a State its peg will be placed opposite the State's vote. One side would peg its States on the left and one on the right of the tables of States, so as to be able to add their respective scores up easily. The side that foots up 201 electoral votes first elects its President and wins the game. The voting for President is to be carried on as follows: As soon as a candidate for President is entered every player of the side to whom he belongs will in his turn vote on the States, one at a time in their alphabetical order—that is to say, it being his turn to play he will throw his card as usual against his opponent of the other party and the majority card settles it. As each State is won it must be pegged to show to which party it belongs.

17. But it may be that one side has its candidate running for the Presidency some time before the other side's man has been got through the Senate Chamber, and so is not yet entered for the Presidential Race. In that case the players on that side whose man is entered can carry the States and peg them if they throw majority cards; but if their opponents, whose man is not yet entered for the Presidency, should throw the majority card on any call the majority which they throw is to be counted to advance their man at whatever stage of the game he happens to be. Call the States in their order on the list once and let each be voted on once, and only once, until the whole thirty-eight have been called. Some will be carried by one side and some by the other side and pegged accordingly. Some of them will not be carried by either side, each player, perhaps, having thrown a card of equal value—5,000 against 5,000—which would be a tie, and so the State would be left unpegged. Having called and voted on each State once, go back and call over the States still left to be carried, again calling them in their order on the list. On this second call no State must be passed until it is carried by one party or the other. If cards of equal value are thrown on the second call, that will be called a "tie," and at once the State will be called again for the next two players to decide, and if they tie it again it will be called again for the next two players to decide, and so on till one player secures its electoral vote by throwing a higher card than his opposing player.

The board A may be illustrated in any manner desired, and pictures or symbols may be employed to designate the White House, Senate, &c., if desired.

The arrangement of the different sections on the board may also be varied as desired.

Having thus explained our invention, what we claim is—

1. A game-board provided with a number of divisions marked, respectively, "U. S. Senate," "Joint Vote," "Vote of Senate," and "Vote of House."

2. The game-board herein described, provided with a presidential table containing the names of the several States of the United States disposed in a vertical column, figures representing the electoral votes of the States disposed opposite the names of the States, and two columns of scoring-points also disposed opposite said names; a senatorial table having a number of divisions marked, respectively, "U. S. Senate," "Joint Vote," "Vote of Senate," and "Vote of House;" a congressional ladder having figures representing votes between each rung; a gubernatorial table having figures between each rung, and a mayor's ladder, also having figures between each rung.

3. The game-board herein described, provided with a presidential table containing the names of the several States of the United States disposed in a vertical column, two col-

umns of figures representing the electoral votes of the States disposed on opposite sides of the names of the States, and two columns of scoring-points disposed opposite said columns of figures; a senatorial table having a number of divisions marked, respectively, "U. S. Senate," "Joint Vote," "Vote of Senate," and "Vote of House;" a congressional ladder having figures representing votes between

each rung; a gubernatorial table having figures between each rung, and a mayor's ladder, also having figures between each rung, in combination with scorers and a set of game-cards.
