UNITED STATES PATENT OFFICE

2,640,990

OVERALL WITH STRAP ARRANGEMENT

Torry Hill Orenge, Jersey City, N. J.

Application December 5, 1951, Serial No. 260,010

2 Claims. (Cl. 2—80)

1

This invention relates to a boy's trousered garment, and its principal object is to provide an improved garment which will impart good appearance and protection to the wearer, permit fullest freedom of exercise and play without loosening, dislocating, losing, or impairing any of the supporting parts of the garment, and affording enhanced convenience to the boy in dressing and removing the garment.

Another object is to provide an improved garment possessed of the foregoing advantages, and having all of its supporting parts fixed integrally with the rest of the garment, thereby preventing loss of such part during handling, wear, or laundering of the garment.

A further object is to provide an improved garment possessed of the foregoing advantages, and being conveniently and economically manufacturable, salable at low cost, simplified, strong, durable, and efficient.

Other objects and advantages will hereinafter appear.

In the accompanying drawings,

Fig. 1 is a perspective front elevational view of the boy's trousered garment constituting the invention.

Fig. 2 is a similar view showing the rear appearance of the garment.

Fig. 3 is a fragmentary rear elevational view, showing the upper part of the garment.

The boy's garment 1 includes a lower trousers part 2 and integrally with the latter an upper part 3 constituting a vest. The lateral front portions 4 or vest 3 extend upwardly over the wearer's shoulders 5, and rearwardly of said shoulders to locations 6 near to the nape 7 of the neck, whereat each portion 4 terminates in a tubular member 8. At the wearer's back 9 is provided a strap 10 the median portion 11 of which passes slidably through both of the tubular members 8 of the vest portions 4, as shown in Fig. 2. The strap 10 has one of its terminals 12 securedly fixed to the rear upper rim 13 of the trousers part 2 of the garment, as illustrated in Fig. 3, while its opposite end portion 14 is provided with a series of button-holes 15 that are attachable to and detachable from a button 16 carried by the rim 13, for selectively adjusting the operative length of the strap 10.

While wearing the garment 1 and during the boy's strenuous exercise, play, or other exertions, its supporting portions comprising the rear parts

2

of vest 4 together with interlinked portion 11 of strap 10 with their location near the neck prevent any slipping off of said parts 4 from the wearer's shoulders. Also, the free slidable movements of the vest parts 4 and median strap parts 11, relatively to each other, afford much comfort to the body during the said exertions. The permanent securement of the strap terminal 12 to the trousers 2 prevents loss of the strap 10 during the handling, wear, or laundering of the garment.

Variations may be resorted to within the scope of the invention, and portions of the improvements may be used without others.

Having thus described my invention, I claim:

1. A garment comprising trousers and a vest integral with said trousers, said vest having a pair of front portions extending upwardly to form shoulder portions, and projecting rearwardly of the shoulder portions to form back portions, each of said back portions terminating in a tubular member, a strap having one end thereof fastened to the rear part of said trousers and its other end attachable to and detachable from said trousers, and said strap having its median portion passing slidably through both of said tubular members.

2. A garment comprising trousers and a vest integral with said trousers, said vest having a pair of front portions extending upwardly to form shoulder portions, and projecting rearwardly of the shoulder portions to form back portions, each of said back portions terminating in a tubular member, a strap having one end thereof fastened to the rear part of said trousers and its other end attachable to and detachable from said trousers at a plurality of locations on said strap, and said strap having its median portion passing slidably through both of said tubular members.

TORRY HILL ORENGE.
